inscription", is dated March 25, 804. This inscription, located in the district of Pare in the Kediri Regency of East Java, is actually a copy of the original, dated some 120 years earlier; only this copy has been preserved. Its contents concern the construction of a dam for an irrigation canal near the river Śrī Hariñjing (nowadays Srinjing). This inscription is the last of its kind to be written using Pallava script; all consequent examples are written using Javanese script (Wiki).

Old Javanese is not included in Ethnologue.

[**ORIYA**] Odia /ə'di:ə/ or Oriya /ɒ'ri:ə/, is a language spoken by 3.2% of India's population. It is an Indo-Aryan language that is spoken mostly in eastern India, with around 40 million native speakers as of the year 2016 from the state of Odisha, adjoining regions of its neighboring states and by the largely migrated Odia population across India. It is the predominant language of the Indian state of Odisha, where native speakers make up 80% of the population, and also is spoken in parts of West Bengal, Jharkhand, Chhattisgarh and Andhra Pradesh. Odia is one of the many official languages of India; it is the official language of Odisha and the second official language of Jharkhand. The language is also spoken by a sizable population of at least 10 million people in Chhattisgarh. Odia is the sixth Indian language to be designated a Classical Language in India on the basis of having a long literary history and not having borrowed extensively from other languages. The earliest known inscription in Odia dates back to the 10th century AD. (Wiki).

Ethnologue considers Oriya a macro-language consisting of nine separate languages: 1) Bhatia [bgw]; 2) Bhunjia [bhu]; 3) Bodo Parja [bdv]; 4) Desiya [dso]; 5) Kupia [key]; 6) Odia [ory]; 7) Oriya, Adivasi [ort]; 8) Reli [rei]; 9) Sambalpuri [spv].

This Vocabulary contains over 9,000 entries. By no means are all the words and phrases of the Adiwasi Oriya language presented here. We have left out most of the flora and fauna words, as well as culturally-bound words....Our research on the Adiwasi Oriya language began in 1970, and so, too, the collection of words and phrases....The Adiwasi Oriya-speaking tribal people of India live in the border areas of Andhra Pradesh and Orissa states....This language is the tribal form of Oriya, the state language of Orissa. Formal Oriya, as taught in Orissa schools, and Adiwasi Oriya are not mutually intelligible. Adiwasi Oriya is an Indo-Aryan language and is the *lingua franca* of all the tribal people in several Blocks in Visakhapatnam District. In 1986 we conducted a survey of the entire language area and found that there are 100,000 mother tongue speakers of Adiwasi Oriya in Andhra Pradesh. There are almost certainly more than this number in Orissa. The dialect recorded here in that of Araku Valley, Visakhapatnam District, Andhra Pradesh" (Introduction).

[**OROCH**] The Oroch language is spoken by the Oroch people in Siberia. It is a member of the northern group of the Tungusic languages and is closely related to the Nanai language and Udege language. It is spoken in the Khabarovsk Krai (Komsomolsky, Sovetskaya Gavan, and Ulchsky districts). The language is split into three dialects: Tuminsky, Khadinsky, and Hungarisky. "A book of this nature has been a long-felt want in the interest of travellers and others to facilitate direct dealings with the Gallas and to enable supervision to be kept over interpreters when made use of" (Note, John L. Harrington).

"When I first went to Abyssinia in 1907, my duties made it desirable that I should learn the Galla language. Dr. Krapf's Vocabulary, published in 1842, was out of print. I therefore began collecting from the natives such words as I could for my own use, till, in course of time, the work has assumed its present form.... I hope... to facilitate the better understanding of a most industrious, pastoral and agricultural people, who are also keen traders" (Preface). Edwin Foot published a Galla-English and English-Galla dictionary (Cambridge University Press, 1913) and New York 1914. Karl Tutschek published an English-German-Galla dictionary in Munich in 1844-45, two vols.

**1969:** [LILLYbm] *Boran vocabulary*, by G. H. Webb. Nairobi: Literacy Centre of Kenya, 1969. Original white wrappers, lettered in black. Pp. [2] 1-50 51-52. First edition. "For limited distribution only." Borana-English, thematically arranged, pp. 4-50.

"This vocabulary is a reprint of a mimeographed copy, dated August 1960, and has been made available for the purpose of research, criticism, review and private use only. It is sincerely regretted that our repeated efforts over a number of years, to trace Mr. C. A. Webb's whereabouts remained unrewarded....By making this vocabulary available to students, the Literacy Centre of Kenya has no other interests than to give a tribute to the author and a service to humanity" (Note, J. J. Dames). "Boran, which is basically the same language as the Gallinya spoken all over Ethiopia, is in common use without much variation all over the Northern Frontier District, where it is a truer lingua franca than Somali. No useful vocabulary seems to exist—a deficiency which I here attempt to remedy. This list of words was compiled in the first half of 1959, and had I gone on with it to the present [1960] I might have doubled its size, since Boran is an elaborate and richly-endowed language" (Introduction). Webb was District Commissioner, Moyale.

The author indicates in the preface that this volume is intended to be used together with his earlier Borana-Italian dictionary published in Bologna in 1973. An English dictionary of Borana was published in 1995 by Leus in Ethiopia.

"As a whole the dictionary is a unique mind of cultural and linguistic information about the little-known southern-most variety of Oromo" (Gragg, p. xv: see below).

**1982:** [LILLYbm] *Oromo dictionary*, by Gene B. Gragg, with Terfa Kumsa and other Oromos. East Lansing, Mich.: African Studies Center, Michigan State University, in cooperation with Oriental Institute, University of Chicago, 1982. Original stiff red

wrappers, lettered in black, with black and red stylized outline of Africa on front cover. Pp. *i-iv* v-xxx, 1-462 463-466. First edition. Series: Monograph / Committee on Northeast African Studies 12. Includes Oromo-English, pp. 1-408, with "systematic index" classified Oromo-English, pp. [409]-462, with detailed bibliography of previous Oromo lexical material, pp. xxix-xxx. Includes a thorough discussion of this material, pp. xiv-xv, and a description of the construction of the present dictionary, pp. xvii-xviii.

"Both in terms of number of speakers and geographic extent, Oromo is certainly one of the five or six most important languages of Africa. More importantly, it is at this time probably the African language most deserving of a lengthy and solidly researched dictionary such as this one. Political developments since 1974 have resulted in the increasing use of Oromo in publishing and broadcasting in Ethiopia, a change in status for the language symbolized by the replacement of the misnomer 'Galla' by the self-name of speakers of the language, 'Oromo.'" It is not well known that speakers of this language occupy about a quarter of the territory of Kenya... and a large area of Somalia as well... This is a thorough and accurate dictionary.... There are approximately three thousand main entries. Sub-entries bring the total to well over six thousand words." (Foreword, "G.H.").

"The author was the son of a former head chief of the Omaha tribe and, after being educated at a mission school, went to Washington D.C. and worked for the Bureau of Indian Affairs. In 1910, he became an ethnologist and worked for the Bureau of American Ethnology until he died, the year this dictionary was published" (bookseller's description: Ken Lopez). The Osage Indians lived originally in Missouri, but in 1812

were settled on the Osage Reservation in northeastern Oklahoma. The Osage language is of the Siouuan family. Only a few hundred speakers remain today.

[**OSHIWAMBO**] The Ovambo language or Oshiwambo is a dialect cluster spoken by the Ovambo people in Angola and northern Namibia, of which the written standards are Kwanyama and Ndonga. The native name for the language is Oshiwambo (also written "Oshivambo"), which is also used specifically for the Kwanyama and Ndonga dialects. [**OSSETIC**] Ossetian, also known as Ossete and Ossetic (endonym: Ирон æвзаг, Iron ævzag), is an Eastern Iranian language spoken in Ossetia, a region on the northern slopes of the Caucasus Mountains. It is a direct descendant of the Scythian, Sarmatian and Alanic languages. The Ossete area in Russia is known as North Ossetia-Alania, while the

area south of the border is referred to as South Ossetia, recognized by Russia, Nicaragua, Venezuela and Nauru as an independent state but by most of the rest of the international community as part of Georgia. Ossetian speakers number about 577,450, with 451,000 speakers in the Russian Federation recorded in the 2010 census... The first printed book in Ossetian appeared in 1798. The first newspaper, Iron Gazet, appeared on July 23, 1906 in Vladikavkaz. While Ossetian is the official language in both South and North Ossetia (along with Russian), its official use is limited to publishing new laws in Ossetian newspapers. There is a monthly magazine Max dug (Max дуг, "Our era"), mostly devoted to contemporary Ossetian fiction and poetry. Ossetian is taught in secondary schools for all pupils. Native Ossetian speakers also take courses in Ossetian literature. The first Ossetian language bible was published in 2010 (Wiki).

[**OTOMI LANGUAGES**] Otomi (/ˌoʊtəˈmiː/; Spanish: Otomí Spanish: [otoˈmi]) is a group of closely related indigenous languages of Mexico, spoken by approximately 240,000 indigenous Otomi people in the central altiplano region of Mexico. It belongs to the Oto-Pamean branch of the Oto-Manguean language family. It is a dialect continuum of closely related languages, because many of the varieties are not mutually intelligible. The word Hñähñu [hɲãhɲú] has been proposed as an endonym, but since it represents the usage of a single dialect it has not gained wide currency. Linguists have classified the modern dialects into three dialect areas: the Northwestern dialects spoken in Querétaro, Hidalgo and Guanajuato; the Southwestern dialects spoken in the State of Mexico; and the Eastern dialects spoken in the highlands of Veracruz, Puebla, and eastern Hidalgo and in villages in Tlaxcala and Mexico states.... After the Spanish conquest Otomi became a written language when friars taught the Otomi to write the language using the Latin script; the written language of the colonial period is often called Classical Otomi. Several codices and grammars were composed in Classical Otomi. A negative stereotype of the

Otomi promoted by the Nahuas and perpetuated by the Spanish resulted in a loss of status for the Otomi, who began to abandon their language in favor of Spanish. The attitude of the larger world toward the Otomi language began to change in 2003 when Otomi was granted recognition as a national language under Mexican law together with 61 other indigenous languages (Wiki).

Ethnologue considers Otomi a macro-language including the following nine separate languages: 1) Otomi, Eastern Highland [otm]; 2) Otomí, Estado de México [ots]; 3) Otomi, Ixtenco [otz]; 4) Otomi, Mezquital [ote]; 5) Otomi, Querétaro [otq]; 6) Otomi, Temoaya [ott]; 7) Otomi, Tenango [otn]; 8) Otomi, Texcatepec [otx]; 9) Otomi, Tilapa [otl].

[**OTOMI, IXTENCO**] Ixtenco Otomi, also known as Tlaxcala Otomi, is a native American language spoken in the town of San Juan Bautista Ixtenco in the state of Tlaxcala, Mexico. It has been classified as Eastern Otomi by Lastra (2006). Lastra considers Ixtenco Otomí to be a very conservative dialect. In Tlaxcala, Otomí was also formerly spoken in nearby Huamantla, located to the north (Carrasco 1950). To the east, it was spoken in Nopaluca, San Salvador el Seco, and Cuapiaxtla. Some families from Ixtenco have migrated to Máximo Serdán in Rafael Lara Grajales, Puebla (Lastra 1998) (Wiki).

**[OTTAWA]** Ottawa (or Odawa) is a dialect of the Ojibwe language, spoken by the Ottawa people in southern Ontario in Canada, and northern Michigan in the United States. Descendants of migrant Ottawa speakers live in Kansas and Oklahoma. The first recorded meeting of Ottawa speakers and Europeans occurred in 1615 when a party of Ottawas encountered explorer Samuel de Champlain on the north shore of Georgian Bay. Ottawa is written in an alphabetic system using Latin letters, and is known to its speakers as Nishnaabemwin "speaking the native language" or Daawaamwin "speaking Ottawa"... Ottawa speakers are concerned that their language is endangered as the use of English increases and the number of fluent speakers declines. Language revitalization efforts include second language learning in primary and secondary schools (Wiki).

Ethnologue: otw. Alternate Names: Odawa, Ojibway, Ojibwe. Ethnologue considers Ottawa a separate language.

"This book is a compilation of words spoken by the Ottawa Indians of Oklahoma. No other claim is made for it. Source data included the original handwritten list of words with notes and the Ottawa naming book left to me by the late Clarence E. King, Sr. who, at the time of his death, was the Chief of the Ottawa Tribe. Other sources were letters and notes, by the author, gathered from conversations with various tribal elders.... Conversational tests have also been made with the Grand Traverse Band of Ottawa and Chippewa Indians and the Cross River Band of Ottawas in Northern Michigan. Although conversation is possible there is some difficulty due in large part to geographical

influences much the same as the Northern and Southern dialects in spoken English" (Foreword).

[**PAAKANTYI**] The Paakantyi language... is part of the Pama–Nyungan languages Sprachbund, and one of the three major Aboriginal language groups for the Aboriginal people of present-day Broken Hill Region [of Australia]. The name of the language refers to the Paaka (Darling River), with the suffix -ntyi, meaning 'belonging to'. The name Paakantyi therefore simply means the River People. Etymologically the suffix -kali has been attributed as meaning 'people', and is incorporated in numerous group names in the nearby area, including Pantyikali (Creek people), Bulali (Hill people) and Thangkakali (Wiki).

[**PAIUTE, NORTHERN**] Northern Paiute /'pa:u:t/, also known as Numu and Paviotso, is a Western Numic language of the Uto-Aztecan family, which according to Marianne Mithun had around 500 fluent speakers in 1994. Ethnologue reported the number of speakers in 1999 as 1,631. It is closely related to the Mono language. In 2005, the Northwest Indian Language Institute of the University of Oregon formed a partnership to teach Northern Paiute and Kiksht in the Warm Springs Indian Reservation schools. In 2013, Washoe County, Nevada became the first school district in Nevada to offer Northern Paiute classes, offering an elective course in the language at Spanish Springs High School. Classes have also been taught at Reed High School in Sparks, Nevada. Elder Ralph Burns of the Pyramid Lake Paiute Reservation worked with University of Nevada, Reno linguist Catherine Fowler to help develop a spelling system. The alphabet uses 19 letters. They have also developed "a language-learning book, "Numa Yadooape," and a series of computer disks of language lessons (Wiki).

[**PALAUAN**] Palauan (a tekoi er a Belau) is one of the two official languages of the Republic of Palau, the other being English. It is a member of the Austronesian family of languages, and is one of only two indigenous languages in Micronesia that is not part of the Oceanic branch of that family, the other being Chamorro (see Dempwolff 1934, Blust 1977, Jackson 1986, and Zobel 2002). Most researchers agree that Palauan and Chamorro are instead outliers on the Sunda-Sulawesi branch of the Austronesian language family, though it has been claimed that Palauan constitutes a possibly independent branch of the Malayo-Polynesian languages (Dyen 1965). The Palauan language is widely used in day-to-day life in Palau (Wiki).

[**PALAUNG**] Palaung, or in Chinese De'ang, is a Mon–Khmer dialect cluster spoken by over half a million people in Burma (Shan State) and neighboring countries. The Palaung people are divided into Palé, Rumai, and Shwe, and each of these has their own language. The Riang languages are reported to be unintelligible or only understood with great difficulty by native speakers of the other Palaung languages. A total number of speakers is uncertain; there were 150,000 Shwe speakers in 1982, 272,000 Ruching (Palé) speakers in 2000, and 139,000 Rumai speakers at an unrecorded date (Wiki).

"This dictionary is the first printed word-book of the Palaung language. The words were gathered from the speech of the Palaungs of Namhsan, the capital of Tawngpeng, in the Northern Shan States of Burma, and the sentences from actual conversation and from their folk-tales" (Introduction).

[**PALULA**] Palula (also spelled Phalura, Palola, Phalulo, and also known as Ashreti (Acharêta') or Dangarikwar, the name used by Khowar speakers), is a Dardic language spoken by approximately 10,000 people in the valleys of Ashret and Biori, as well as in the village Puri (also Purigal) in the Shishi valley, and at least by a portion of the population in the village Kalkatak, in the Chitral District of Khyber Pakhtunkhwa province of Pakistan. A related variety of this language is spoken in the village Sau in Afghanistan, and another closely related variety in the village Khalkot in Dir District.

Palula is pronounced as /paaluulaá/, with three long vowels and a rising pitch on the final syllable. The Palula language has been documented by George Morgenstierne (1926, 1941), Kendall Decker (1992), Henrik Liljegren (2008, 2009, 2010), and Henrik Liljegren & Naseem Haider (2009, 2011). It is classified as a Dardic Language but this is more of a geographical classification than a linguistic one. In 2004, Anjuman-e-taraqqi-e-Palula, the Society for the promotion of Palula, was founded by people in the Palula community to promote the continued use of their language and to encourage research and documentation of their language, history and culture (Wiki).

This is the first published vocabulary of the language.

"Lower Chitral is one of the most polyglott regions in Asia. Here, within an area of some 3000 square kilometres, no less than ten distinct languages are spoken. About most of them we possess some information, but two Dardic dialects, Phalura and Dameli, were until recently completely unknown... No specimen of [Phalura] is ...given in the LSI, and during my stay in Chitral in 1929 I therefore endeavored to collect some information about it.... The number of speakers of Phalura in Chitral scarcely exceeds 800-1000.... Although Phalura is closely related to, and probably an offshoot of, Shina, it must, however, have branched off at a considerably earlier date" (Introduction).

**[PAME, NORTHERN]** The Pame language is an indigenous language of Mexico spoken by around 10,000 Pame people in the state of San Luis Potosí. The Pame language belongs to the Oto-Pamean branch of the Oto-manguanean language family. The Ethnologue counts two living varieties of Pame both spoken in the state of San Luis Potosí: Central Pame spoken in the town of Santa María Acapulco, and Northern Pame spoken in communities from the north of Río Verde to the border with Tamaulipas. The third variety, Southern Pame, was last described in the mid 20th century, is assumed to be extinct, and is very sparsely documented. It was spoken in Jiliapan, Hidalgo and Pacula, Querétaro.

**[PAME, SOUTHERN]** The Pame language is an indigenous language of Mexico spoken by around 10,000 Pame people in the state of San Luis Potosí. The Pame language belongs to the Oto-Pamean branch of the Oto-manguanean language family. The Ethnologue counts two living varieties of Pame both spoken in the state of San Luis Potosí: Central Pame spoken in the town of Santa María Acapulco, and Northern Pame spoken in communities from the north of Río Verde to the border with Tamaulipas. The third variety, Southern Pame, was last described in the mid 20th century, is assumed to be extinct, and is very sparsely documented. It was spoken in Jiliapan, Hidalgo and Pacula, Querétaro.

"This forms one of a series of three volumes written to assist English-speaking persons to learn the Pangasinan languages. While each volume has been designed to be useful in itself, the three form an integrated whole, each one supplementing and completing the others. The companion volumes for this dictionary are *Pangasinan Reference Grammar*, and *Spoken Pangasinan*.... All three works are by the same author.... This dictionary lists some 3,000 word roots, from which a much greater number of words can be formed" (Introduction).

[**PANJABI**] Punjabi /pʌnˈdʒɑːbi/ (Shahmukhi: پنجاب panjābī; Gurmukhi: ਪੰਜਾਬੀ pañjābī) is an Indo-Aryan language spoken by over 100 million native speakers worldwide, making it the 10th most widely spoken language (2015) in the world. It is the native language of the Punjabi people who inhabit the historical Punjab region of Pakistan and India. Among the Indo-European languages it is unusual in being a tonal language. The Punjabi language is written in the Shahmukhi and Gurumukhi scripts, making it one of the relatively few languages written in more than one script (Wiki).

Ethnologue lists eight languages under the classification Panjabi, including Eastern Panjabi (pan), spoken in India, Western Punjabi (pnb), spoken in Pakistan, and six other related languages.

[**PANJABI, EASTERN**] Eastern Punjabi are the eastern dialects of Punjabi in Indian Punjab (Wiki).

Edward Francis Knottesford Fortescue was the author of *The Armenian Church, founded by St. Gregory the Illuminator, being a sketch of the history, liturgy, doctrine, and ceremonies of this ancient national church* (London, 1872), a standard church history reprinted by AMS Press in 1970. This is the earliest dictionary of Punjabi listed in the *Encyclopædia Britannica*, and appears to be the first dictionary of the language.

**1919:** [LILLYbm] *An English-Panjabi Vocabulary of 5800 Words*, by T[homas] Grahame Bailey. Calcutta: printed at the Baptist Mission Press, and published by the author, 1919. Original light green quarter-linen and pale green paper pasted to boards, lettered in black. Pp. *i-ii* iii-xvi, 1 2-159 160. First edition. Not in Zaunmüller,

"This book has been issued primarily to meet the need of those Europeans who use Panjabi in their intercourse with the people of the country, and secondarily to enable Panjabis, schoolboys and others, to ascertain the meanings of the commoner English words which they daily come across. No English-Panjabi dictionary at present exists.... What appeared to be required was a volume, which, while containing a large selection of words likely to be useful, would be small enough to be easily handled, and cheap enough to be within the reach of all. The price has been increased by the war, but it has been kept as low as possible, and no attempt has been made to do more than cover expenses.... The idea of this work was suggested by Col. D. C. Phillott's excellent 'English-Hindustani Vocabulary.'... Panjabi may be divided into two main dialects, the northern or western, and southern or eastern. The former is spoken west and north of Amritsar and is used throughout in this Vocabulary. It is commonly called northern Panjabi to distinguish it from the southern dialect" (Introduction).

[**PAPIAMENTU**] Papiamentu (English /ˌpɑːpiəˈmentuː, ˌpæp-/) or Papiamento (English pronunciation: /ˌpɑːpiəˈmentu, ˌpæp-/) is the most-widely spoken language on the Caribbean ABC islands, having official status in Aruba and Curaçao. The language is also recognised on Bonaire by the Dutch government. Papiamentu is a language derived from African and Portuguese languages with some influences from American Indian languages, English, Dutch and Spanish (Wiki).

Ethnologue: pap. Alternate Names: Curaçoleño, Curassese, Papiamen, Papiamento, Papiamentoe.

**1918:** [LILLYbm] *Woordenlijst en samenspraak, Hollandsch-Papiamentsch-Spaansch*, compiled by W.M. Hoyer. [Willmestad], Curacao: A. Bethencourt e hijos, 1918. Contemporary marbled paper over boards, with original rose-colored wrappers mounted on front and rear covers. Pp. 1-3 4-72 73-74. First edition. Not in Zaunmüller. Reinecke 36.405. Includes English-Papiamento-Spanish vocabulary arranged thematically and by parts of speech, pp.[7]-53. This is the basic material for numerous later editions throughout the twentieth century.

**1936:** [LILLYbm] *Vocabulary and Dialogues: English - Papiamento - Dutch*, compiled by W. M. Hoyer. [Willemstad], Curaçao: Hollandsche Boekhandel, 1936.

Original red wrappers, lettered and decorated in black. Pp. 1-3 4-112 113-114. First edition. Not in Zaunmüller. Reinecke 36.413. Includes Includes English-Papiamentu-Dutch vocabulary arranged thematically and by parts of speech, pp.17-76. This work is simply a rearranged version of Hoyer's 1918 Dutch-Papiamentu-Spanish vocabulary and dialogues with English replacing Spanish. It appears to be the earliest Papiamentu vocabulary with English equivalents. The first true English-Papiamentu dictionary appears to have been compiled in 1991 by Jossy Mansur.

"Second edition" **1948**: [LILLYbm] *Vocabulary and Dialogues: English / Papiamentu / Dutch*, compiled by W. M. Hoyer. Willemstad, Curaçao: Hollandsche Boekhandel N.V., 1948. Original wrappers. 112 pp. ?Second edition. Not in Zaunmüller. Reinecke 36.413 (indicating first edition as 1936, second edition 1937, another "second edition" 1948).

[Third edition] **1949**: [LILLYbm] *A little Guide. English-Papiamentu-Netheland* [sic], compiled by W. M. Hoyer. Curaçao: Boekhandel Bethencourt, 1949. Original red wrappers, lettered and illustrated in black. Pp. 1-2 3-99 100-104. A later [?third] edition. Reinecke 36.422 (not seen by Reinecke, and thus not recognized as a later edition of 36.413). Includes English-Papiamentu-Dutch vocabulary arranged thematically and by parts of speech, pp.[14]-67.

**1981**: [LILLYbm] *Erór- i omishonnan di dikshonario papiamentu-ulandes, ulandes-papiamentu, skirbi pa Mario Dijkhoff / ku koperashon di Magalis Vos de Jesus, 1980 de Walburg Pers.* Korsou: Boekhandel Salas, 1981. Original pale blue wrappers, lettered in black. Pp. 1-2 3-44. First edition. Includes Papiamentu-Dutch, pp. 3-15, and Dutch-Papiamentu, pp. 17-44. This volume of errors and omissions is meant to supplement Dijkhoff's Dutch-Papiamentu dictionary of 1980.

**1992**: [LILLYbm] *English / Papiamentu bilingual dictionary*, by Betty Ratzlaff. Bonaire, Netherlands Antilles: The TWR Dictionary Foundation, 1992. Issued with individual title pages and inverted paging. Title on added t.p.: *Papiamentu, Ingles dikshonario bilingual*. Original maroon imitation leather over boards, lettered and decorated in gold. Pp. [English-Papiamentu portion] *i-ii iii-xxv, 1 2-423 424*; pp. [inverted Papiamentu-English portion] *[1] i-ii iii-xxi* [versos paginated with odd numbers rather than even], *1 2-284*. First edition. Includes English-Papiamentu, pp. [1]-423, and (inverted), Papiamentu-English, pp. [1]-284. Most complete English Papiamentu dictionary to that date.

"Because the meaning, pronunciation and spelling of many Papiamentu words is still controversial, my word equivalents were often painstakingly arrived at after lengthy deliberations and consultation. I therefore advise that what is printed as an equivalent represents compromise and consensus of opinion....This dictionary has a Papiamentu vocabulary of about 17,000 entries" (Preface/What is Papiamentu).

Papiamentu is the native, though unofficial, language of the southern islands of the Netherlands Antilles - Curaçao, Aruba, and Bonaire. A Creole language with Spanish as its base, it contains numerous words from Dutch, English, Portuguese, French, and many other languages. There are about 200,000 speakers.

[**PÄRI**] Päri, or Lokoro, is a Luo language of South Sudan. Päri has been claimed to have ergative alignment, which is rare-to-nonexistent in African languages, although recent descriptions of the language have instead described the case system as marked nominative (nominative–absolutive) (Wiki).

Ethnologue: lkr. Alternate Names: Lokoro.

**1976:** [IUW] *Päri, a Luo language of southern Sudan: small grammar and vocabulary*, by Antonio Simeoni; edited by Stefano Santandrea. Bologna (Italy): E.M.I., 1978. 119 p.: map; 21 cm. Library binding, preserving original cream wrappers, lettered in black. Museum Combonianum 34. English-Päri vocabulary, pp. 95-114.

"Scholars, and even simply amateurs, will probably ask how the publication on a language spoken by such a small minority (c. 8,000 people) is justified.... The peculiar position of the Päre, not far from the Acoli of the Sudan, renders the difference from the latter's language and great similarity with the Jɛ-Luo's still more remarkable: a feature that may stimulate linguistics to further research on the matter" (Introduction).

[**PASHTO**] Pashto (English pronunciation: /'pʌʃtoʊ/, rarely /'pæʃtoʊ/; Pashto: پښتو Paṣṭō [ˈpəʃtɔː]), also known in older literature as Afghānī ([افغانی13]) or Paṭhānī, is the South-Central Asian language of the Pashtuns. Its speakers are called Pashtuns or Pukhtuns and sometimes Afghans or Pathans. It is an Eastern Iranian language, belonging to the Indo-European family. Pashto is one of the two official languages of Afghanistan, and it is the second-largest regional language of Pakistan, mainly spoken in the west and northwest of the country. Pakistan's Federally Administered Tribal Areas (FATA) are almost 100% Pashto-speaking, while it is the majority language of the province of Khyber Pakhtunkhwa and the northern districts of Balochistan. Pashto is the main language among the Pashtun diaspora around the world. The total number of Pashto-speakers is estimated to be 45–60 million people worldwide. Pashto belongs to the Northeastern Iranian group of the Indo-Iranian branch, but Ethnologue lists it as Southeastern Iranian. Pashto has two main dialect groups, “soft” and “hard”, the latter known as Pakhto (Wiki).

Ethnologue lists four separate languages under Pashto: 1) Pashto, Central [pst]; 2) Pashto, Northern [pbu]; 3) Pashto, Southern [pbt]; 4) Waneci [wne].

**1854-1855:** [LILLY] *A grammar and vocabulary of the Pooshtoo language (as spoken the the Trans-Indus territories under British rule, &c. &c.)*. by Captain John L[uther]Vaughan, [Sir, 1820-1911]. Calcutta: Thacker, Spink and Co. [etc.], 1854 [-1855]. Contemporary full brown leather, unlettered, with original front wrappers preserved. Pp. *i-v vi-xii xiii-xvi, I 2-104 105-106, i-iii<sup>2</sup>, iv<sup>2</sup>, 3 4-148<sup>2</sup>, I<sup>3</sup> 2-7<sup>3</sup> 8<sup>3</sup>*. First edition. Not in Zaubmüller. There was a second edition in 1901. First grammar and vocabulary of the language. This copy annotated in English and Pushtu by various owners; ownership signature on title page dated 1875.

**1867:** [LILLY] *A dictionary of the Pukkhito or Pukshito language, in which the words are traced to their sources in the Indian and Persian languages*, by H[enry] W[alter] Bellew (1834-1892). London: Thacker & Co., 1867. xi, [1], 355 p.; 26 x 20 cm. Contemporary dark brown half-leather and brown pebbled cloth, lettered in gold with raised bands. Bound uniformly with the Grammar of that same year. First edition. Zaubmüller 316. The copy is interleaved, with ink inscription on first blank page "The author's own copy", with the bookplate of H.W. Bellew and a printed presentation: "This Book / was presented to the Library of the Royal Empire Society by [in ink] Mrs. Turnbull & Miss Bellew in memory of Surgeon-General H.W. Bellew, C.S.I. October, 1943." The copy is extensively annotated throughout with notes and additions in the author's hand, presumably for a later edition. However, the second edition (see below) appears not to have incorporated any of this material.

Second edition **1901:** [LILLY] *A dictionary of the Pukkhito or Pukshito language, in which the words are traced to their sources in the Indian and Persian languages*, by H[enry] W[alter] Bellew. Lahore: Rai Sahib M. Gulab Singh, 1901. Original brown cloth lettered and gold, with library markings in white and black on spine, front hinge split. Pp. *i-vii viii-xi xii, I 2-355 356*. Second edition. Zaubmüller, col. 316. This copy with withdrawal stamps from the Ministry of Defense. The first edition appeared in London in 1867. Includes Pushtu-English, pp. [1]-182, and English-Pushtu, [185]-355. Appears to simply reprint the first edition.

"This new edition is brought out by Rai Sahib M. Gulab Singh & Sons to meet the demand, and at the special request of Mrs. Bellew" (Note to the Second Edition).

Reprint edition **1980's:** *A Dictionary of the Pukkhito or Pushtu Language in which the Words are Traced to their Sources in the Indian and Persian Languages*, by Henry Walter Bellew. Peshawar Cantt: Saeed Book Bank, n.d. [c. 1980's]. Hardbound without d.j. 355 pp. Reprint of original edition of 1867.

**1867:** [LILLY] *A grammar of the Pukkhito or Pukshito language: on a new and improved system, combining brevity with practical utility, and including exercises and dialogues, intended to facilitate the acquisition of the colloquial*, by H. W. Bellew (1834-1892). London: Thacker & Co, 1867. xii, 155 p; 27 cm. First edition. Contemporary dark brown half-leather and brown pebbled cloth, lettered in gold with raised bands. Bound uniformly with the Dictionary of that same year. First edition. The copy is interleaved, with ink inscription on first blank page "The author's own copy", with the bookplate of H.W. Bellew and a printed presentation: "This Book / was presented to the Library of the Royal Empire Society by [in ink] Mrs. Turnbull & Miss Bellew in memory of Surgeon-

General H.W. Bellew, C.S.I. October, 1943.” In sharp distinction from the author’s copy of the dictionary (see above), this copy is not annotated at all.

**1905:** [LILLYbm] *An English-Pushtu Vocabulary for Lower and Higher Standard Examinations in Pushtu*, by Mirza Said Muhammad. Rawalpindi: Printed at the 'Frontier Exchange' Press, 1905. Contemporary green cloth over boards, without lettering. Pp. [4] 1 2-510. First edition. Not in Zaunmüller. English-Pashto only.

"I have been induced to offer this vocabulary of Pushtu ... by the fact that no such work has been attempted by any munshi [native speaker?] up to the present time... An English Pushtu dictionary undoubtedly does exist but it possesses this fault in common with most dictionaries, that it is difficult to pick out from it the expression which turns the English phrase exactly; this difficulty I have endeavored to obviate by giving the one word which best expresses the English equivalent, or in some cases, when two or more words exist expressing precisely the same meaning, I have given the alternative words" (Preface). Two ownership signatures: Terence Phillips ("Tochi Scouts" 1939) and John B. Avery, 1990.

**1932:** [LILLYbm] *The Pakkhto idiom: a dictionary [A-L] M-Z*, 2 vols., by George Waters Gilbertson, assisted by Arif Ullah, Yusufzai, Makhmud, Afridi, Ali Akbar Khan, Qandahari. Hertford: Published by the Author, 1932. Original dark blue cloth over boards, lettered in gold and decorated in blind and gold. Pp. [Vol. I] *i-vii* viii-xv *xvi*, 1-496; [Vol. II][4] 497-964 (two illustrations precede title page in Vol. I). First edition. Zaunmüller, col. 316. Includes English-Pashto, pp. 1-952, with extensive bibliography, pp. 955-959.

"Afghanistan is to India what Scotland is to England... The two can never be thought of apart... It behooves every one of us to try to cement and increase the friendship and comradeship between the two peoples... Most of our 'highbrows' waste their time in trying to find out *who* the Afghans are. Make it your business to find out *what* they are, and what their justifiable ambitions are. It would suffice the ordinary practical British citizen that the Afghan is there, that he is a virile person, and, probably, the greatest patriot in the world. He is not the puny individual who may safely be left out of the reckoning. His good will is worth millions to us, his ill will, his mistrust of us ... Nay, we are no prophets of good or evil... Even in the best of dictionaries we often find ourselves in search of a missing word or sentence, and... heartily curse the compiler for his lack of erudition. Comfort yourself. In the *New English-Pakkhto Conversational Dictionary* you will find all that you require... insha'allah. It will be available shortly. It covers the eastern and western dialects. The present work deals with the former only" (Foreword).

**1950:** [LILLYbm] *Kratkii afgansko-russkii slovar. Okolo 12000 slov*, by P.B. Zudin. Moscow: Gos. izd-vo inostrannykh i natsionalnykh slovarei, 1950. Original green cloth, lettered in gold and decorated in blind. Pp. 1-3 4-568. First edition. Zaunmüller, col. 316. Includes Pashto-Russian, pp. [11]-557. Zudin published a Russian-Pushto dictionary in 1955. This copy with the ownership signature "Penzl" in ink on the title page, undoubtedly Herbert Penzl, the noted linguist and author of works on Pashto, early German dialects, and phonology. This is the first Russian Pashto dictionary.

**1955:** [LILLYbm] *Russko-afganskii slovar: okolo 21000 slov*, by P.B. Zudin. Moscow: Gos. izd-vo inostrannykh i natsionalnykh slovarei, 1955. Original black cloth over boards, lettered and decorated in gold and blind. Pp. 1-3 4-1176. First edition.

Zaunmüller, col. 316. Includes Russian-Pashto, pp. [9]-1034. Together with the 1950 Pashto-Russian dictionary, this represents the first complete two-way Russian Pashto dictionary.

**1961:** [LILLYbm] *Karmannyi russko-afganskii slovar. 7000 slov*, by K[onstantin] A[leksandrovich] Lebedev. Moscow: Gos. izd-vo inostrannykh i natsionalnykh slovarei, 1961. Original green cloth over boards, lettered in gold. Pp. 1-4 5-752. First edition. Includes Russian-Pashto, pp. 15-752. First Russian pocket dictionary of Pashto.

**1966:** [LILLYbm] *Afgansko-russkii slovar (Pushto). 50 000 slov*, M[artiros] G[rigorevich] Aslanov. Moscow: Izd-vo "Sovetskaia Entsiklopediia", 1966. Original brownish-orange cloth over boards, lettered and decorated in silver and black. Pp. 1-5 6-994 995-996. First edition. Pashto-Russian only. A major dictionary of the language. From the library of Carleton T. Hodge.

[**PASIGRAPHY**] A pasigraphy (from Greek *pasi* 'to all' and *graph* 'write') is a writing system where each written symbol represents a concept (rather than a word or sound or series of sounds in a spoken language). The aim (as with ordinary numerals 1, 2, 3, etc.) is to be intelligible to persons of all languages. The term was first applied to a system proposed in 1796, though a number of pasigraphies had been devised prior to that; Leopold Einstein reviews 60 attempts at creating an international auxiliary language, the majority of the 17th-18th century projects being pasigraphies of one kind or another, and several pasigraphies and auxiliary languages, including some sample texts, are also reviewed in Arika Okrent's book on constructed languages. Leibniz wrote about the alphabet of human thought and Alexander von Humboldt corresponded with Peter Stephen Du Ponceau (1760-1844) who proposed a universal phonetic alphabet. Examples of pasigraphies include Blissymbols and Real Character (Wiki).

"Although several other schemes of universal language were to appear in the course of the 1790's, none aroused more than a fraction of the interest that greeted the Pasigraphic" (Knowlson, *Universal Language Schemes*, p. 153).

Artificial language not listed in Ethnologue.

**1871:** [LILLYbm] *Pasigraphical dictionary and grammar*, by Anton Bachmaier. London: Trübner, 1871 [on wrappers]; Augsburg: printed by A. Volkhart, 1870 [on title page]. Original green wrappers, lettered and decorated in black. Pp. I-V VI-VIII, 1 2-25 26, [4]<sup>2</sup> 1 2-187 188 [4]<sup>3</sup> 1 2-169 170. First edition. Includes English-numerical equivalents, pp. <sup>2</sup>[1]-187, and numerical equivalents-English, pp. <sup>3</sup>[1]-169. Anton Bachmaier was president of the Central Pasigraphical Institute of Munich. The truly universal form of "I love you" is "1605, 1895, 709." French and German pasigraphical dictionaries by the same author appeared in 1868.

"Pasigraphy teaches people to communicate with one another in writing by means of numbers, which convey the same ideas in all languages; and thus it reunites people whom languages separate. ... The number of words that might be employed is infinite. We have chosen for this dictionary 4334 conceptions and confined ourselves to that number because we believe, that out of these, one may find the necessary words to serve his given purpose" (Introduction). "The English, German and French Pasigraphical Dictionaries having appeared, a direct pasigraphical intercourse is now established between these three nations" (rear wrapper).

[**PATWIN**] Patwin (Patween) is a critically endangered Wintuan language of Northern California. As of 2011, there was "at least one first language speaker of Patwin." As of 2010, Patwin language classes were taught at the Yocha Dehe Wintun Nation (formerly Rumsey Rancheria) tribal school (Dubin 2010). Patwin has two (excl. Southern Patwin) or three (incl. Southern Patwin) dialects: "River Patwin (or Valley Patwin) was traditionally spoken along the Sacramento River in Colusa County ... Hill Patwin, was spoken in the plains and foothills to the west." Southern Patwin became extinct shortly after contact. It is very poorly attested, and may be a separate Southern Wintuan language (Mithun 1999). As of 2012, the Tewe Kewe Cultural Center of the Yocha Dehe Wintun Nation has "a California Indian Library Collection and an extensive Patwin language and history research section" (Wiki).

[**PAUMARÍ**] Paumarí (also Paumari, Purupuru, Kurukuru, Pamari, Purupurú, Pammari, Curucuru, Palmari) is an Arauan language spoken in Brazil by about 300 older adults out of an ethnic population of 900. It is spoken by the Paumari Indians, who call their language "Pamoari". The word "Pamoari" has several different meanings in the Paumarí language: 'man,' 'people,' 'human being,' and 'client. Increasingly, speakers of Arawan languages, particularly Paumarí (who have had the most contact with non-natives) are beginning to speak Portuguese. The result, for many of the speakers in Paumarí, is a hybrid of Portuguese and Paumarí, incorporating vocabulary from both languages while retaining the syntax of neither (Chapman, a researcher from the Summer Institute of Linguistics, claims that, at the time of her arrival in 1964, all Paumarí spoke a mixture of Paumarí and Portuguese). Out of the Paumarí group that inhabits the Tapauá River, the youth, which makes up nearly a majority of the population, spoke only Portuguese in 1964. This 'linguistic Creole' tendency in the Paumarí language highlights exactly why languages such as Paumarí are endangered (Wiki).

"Pengo is a tribal Dravidian language spoken in the Koraput district of Orissa [in eastern India], and in the adjoining district of Kalhandi. Hitherto unknown to scholarship, it was investigated by the authors at various periods between 1957-1966...The number of speakers of this language is declining rapidly as the language is replaced by the local form of Oriya."

**[PERSIAN LANGUAGES AND DIALECTS: POLYGLOT]** There are three modern varieties of standard Persian: 1) Western Persian (Persian, Iranian Persian, or Farsi) is spoken in Iran, and by minorities in Iraq and the Persian Gulf states; 2) Dari (Dari Persian, Afghan Persian, or Dari) is spoken in Afghanistan; 3) Tajiki (Tajik Persian) is spoken in Tajikistan and Uzbekistan. It is written in the Cyrillic script. All these three varieties are based on the classic Persian literature and its literary tradition. There are also several local dialects from Iran, Afghanistan and Tajikistan which slightly differ from the standard Persian. The Hazaragi dialect (in Central Afghanistan and Pakistan), Herati (in Western Afghanistan), Darwazi (in Afghanistan and Tajikistan), and the Tehrani accent (in Iran, the basis of standard Iranian Persian) are examples of these dialects. Persian-speaking peoples of Iran, Afghanistan, and Tajikistan can understand one another with a relatively high degree of mutual intelligibility. The following are some languages closely related to Persian, or in some cases are considered dialects: 1) Luri (or Lori), spoken mainly in the southwestern Iranian provinces of Lorestan, Kohgiluyeh and Boyer-Ahmad Province, some western parts of Fars Province and some parts of Khuzestan Province; 2) Lari (in southern Iran); 3) Tat, spoken in parts of Azerbaijan, Russia, and Transcaucasia. It is classified as a variety of Persian; 4) Judeo-Tat. Part of the Tat Persian continuum, and spoken in Azerbaijan, Russia, as well as notably by immigrant communities in Israel and New York (Wiki).

Ethnologue lists Persian as a macro-language, including the following nine languages: 1) Aimaq [aiq]; 2) Bukharic [bhh]; 3) Dari [prs]; 4) Dehwari [deh]; 5) Dzhidi [jpr]; 6) Hazaragi [haz]; 7) Pahlavani [phv]; 8) Persian, Iranian [pes]; 9) Tajiki [tgk].

[**PERSIAN: pre-1750**] Persian (/ˈpɜːrʒən/ or /ˈpɜːrʃən/), also known by its endonym Farsi (فارسی fārsi [fɒːrˈsiː] (listen)), the predominant modern descendant of Old Persian, is one of the Western Iranian languages within the Indo-Iranian branch of the Indo-European language family. It is primarily spoken in Iran, Afghanistan (officially known as Dari since 1958 for political reasons), and Tajikistan (officially known as Tajiki since the Soviet era for political reasons), and some other regions which historically were Persianate societies. The Persian language is classified as a continuation of Middle Persian, the official religious and literary language of the Sasanian Empire, itself a continuation of Old Persian, the language of the Achaemenid Empire. Persian is a pluricentric language and its grammar is similar to that of many contemporary European languages. Persian gets its name from its origin at the capital of the Achaemenid Empire, Persis, modern-day Fars Province, hence the name Persian (Farsi). A Persian-speaking person may be referred to as Persophone. There are approximately 110 million Persian speakers worldwide, with the language holding official status in Iran, Afghanistan, and Tajikistan. For centuries, Persian has also been a prestigious cultural language in other regions of Western Asia, Central Asia, and South Asia by the various empires based in the regions (Wiki).

Ethnologue considers Persian a macro-language.

See Malay **1634** [Herbert], which includes an English-Persian vocabulary under the heading "Language of the Persians," pp. 170-181.

"And as I have in some order given you the description of these people and Countries. It will not offend all (in that usefull to some) if I adde a little of their language in most familiar Dialogues, the *English*, and *Persian* explaining one the other, in these agreeing sequences" (p. 170).

[**PERSIAN, IRANIAN**] Western Persian or Iranian Persian is the most widely spoken dialect of Persian. [Ethnologue considers Iranian Persian a separate language within the macro-language Persian]. It is spoken in Iran and by minorities in Iraq and the Persian Gulf states. It is one of three major dialects of Persian. Western Persian is also known as Iranian Persian, Farsi, Western Farsi, or simply Persian.

[PHILIPPINE LANGUAGES: POLYGLOT] There are some 120 to 175 dialects in the Philippines, depending on the method of classification. Four others are no longer spoken. Almost all are Malayo-Polynesian languages, whereas one, Chavacano, is a creole derived from a Romance language. Two are official (English and Filipino), while (As of 2017) nineteen are official auxiliary languages. Including second-language speakers, there are more speakers of Filipino than English in the Philippines .The Komisyon sa Wikang Filipino enumerated 135 Philippine languages present in the country through its Atlas Filipinas map published in 2014.

The indigenous scripts of the Philippines (Kulitan, Baybayin, Tagbanwa and others) are rarely used; instead, Filipino languages are today written in the Latin script because of the Spanish and American colonial experience. The Arabic script is also used in Muslim areas in some areas in southern Philippines.

"The following pages contain a comparatively intensive study of Casiguan Negrito: grammatical notes a vocabulary, and several texts. To this I have appended a list of over three hundred words and expressions, a comparative study of fifteen of the languages that are at present spoken in northern Luzon. Four of these are Negrito dialects, all of which are practically unknown to linguists; two other ones, the Casiguran and Ilongot, have never been investigated before; and a couple of others, Isneg and Kalina, have been studied only very recently and still mostly very imperfectly. I conclude my paper with a note on the method of counting in use among the Ilongot" (Introduction).

Original tan stapled wrappers, lettered and decorated in black. Pp. [2] i-ii iii-vii viii, 1-139 140 [2]. First edition. Not in Zauhmüller. This copy with an ink inscription on the fly-leaf indicating it was a gift from Rufino Alejandro (Secretary and Executive Officer of the Institute of National Language), dated 1955. "The Institute of National Language has adopted the policy that...terms used in any of the Philippines languages shall be given preference of adoption over their equivalents in English, Spanish, or other foreign languages, without prejudice, of course, to such English and other foreign words which have found their way into the local dialects and are already in current usage. The two-fold purpose is to avoid the coinage of words and to facilitate the propagation of the National Language. In view of this, it was decided to compile from the different languages and dialects terms which may be adopted and later made current through propagation and use. Work on the composite vocabulary was started in 1949" (Foreword). Includes a list of 1,110 common English words, arranged thematically, followed by equivalents in twenty-one Philippine languages: Bikol, Bukidnon, Butuanon, Hiligaynon, Ibanag, Iloko, Itawes, Ivatan, Kinaray-a, Kuyunon, Magindanaw, Maranaw, Masbate, Pampangan, Pangasinan, Samar-Leyte Bisayan, Sambal, Sebu, Surigaonon, Tagalog, and Tausog, pp. 1-139.

Of these, eight are usually labelled major, being ranked by number of mother-tongue speakers. They are Cebuano, Tagalog, Hiligaynon, Ilokano, Bikolano, Waray, Kapampangan and Pangasinan. The other languages are generally known as minor languages...Very little lexical material from the minor languages is available...The purpose of this listing...is to make available from the unpublished materials a brief sampling of forms having a fairly high degree of reliability in lexical equivalence with the English glosses, and reasonably accurate phonemic representation."

**[PIDGIN, CAMEROON]** Cameroonian Pidgin English, or Cameroonian Creole, is a language variety of Cameroon. It is also known as Kamtok (from 'Cameroon-talk'). Five varieties are currently recognized. The terms "Cameroonian Pidgin", "Cameroonian Pidgin English", "Cameroonian Creole" and "Kamtok" are synonyms for what Cameroonians call Cameroon Pidgin English. Many speakers are unaware that this language is different from English proper. It is a variety of West African Pidgin Englishes spoken along the coast from Ghana to Cameroon. It is a vehicular language that has been in active use in the country for over 200 years. It came into being in the Slave Trade Years (1440 to early 1800s). It preceded English in Cameroon: the first Baptist missionaries who arrived Cameroon in 1845 and introduced formal education in English, had to learn Pidgin. A few decades later during the German annexation period (1884–1914), Pidgin resisted a German ban. It took flight when it became a makeshift language used in German plantations and undertakings by forced labourers who were drawn from the hinterland and who spoke different indigenous languages. With time, it invaded the market place and was adopted by Baptist missionaries as the language of their evangelical crusade. For many years, it has been used on school playgrounds and campuses and in political campaigns, and today, it is forcing its way into the spoken media scene. (For a comprehensive description of its linguistic features and its place in the language ecology of Cameroon, see amongst others, Kouega 2007 and 2008) (Wiki).

The language is called O'ob No'ok by its speakers. The closest related languages are the O'odham (Pima and Papago) and the O'othams. There are three major communities in the Oob No'ok region (Yepachic, Maycoba and Yécora) but many of the people live in small outlying hamlets and on isolated family ranches rather than the larger towns (Wiki).

[**PINGILAPESE**] The Pingelapese language is a Micronesian language native to Pingelap, an atoll belonging to the state of Pohnpei in the Federated States of Micronesia. This atoll is the homeland to the Pingelapese people, consisting of a three-square mile range of inhabited small coral islets, Daekae and Sukora, and the uninhabited islet, Pingelap. These islands partially make up the Caroline Islands. For various reasons, including natural disasters and emigration consequent to European and U.S. influence, the current overall population of the Pingelapese people remains relatively small, at around 2,000 people worldwide. Although the official language of the Pohnpei State is English, 200 of the 250 Pingelap atoll residents and 1,200 Pohnpei residents speak Pingelapese. Fortunately, the Pingelapese language is still used today during face-to-face communication amongst speakers of all ages and it maintains its classification as a vigorous language. With the help of linguists like Leilani Welley-Biza sharing knowledge from her elders, significant cultural/historical connections bound to the Pingelapese language can be more thoroughly documented and preserved, to be passed down between generations (Wiki).

[**PINTUPI-LURITJA**] Pintupi (/ˈpɪnˈəpi/ or /ˈpɪnˈəbi/) is an Australian Aboriginal language. It is one of the Wati languages of the large Pama–Nyungan family. It is one of the varieties of the Western Desert Language (WDL). Pintupi is the name commonly used to refer to a variety of the Western Desert Language spoken by indigenous people whose traditional lands are in the area xbetween Lake MacDonal and Lake Mackay, stretching from Mount Liebig in the Northern Territory to Jupiter Well (west of Pollock Hills) in Western Australia. Luritja is a generic name applied to peoples speaking several dialects of the Indigenous Australian Western Desert Language, and thereby also to the dialects themselves (Wiki).

[**PIPIL**] Pipil (natively Nawat) is a Uto-Aztecan language which is similar to Nahuatl, and which was spoken in several parts of present-day Central America before the Spanish conquest. Although it has been on the verge of extinction in western El Salvador and has already gone extinct elsewhere in Central America, as of 2012, new second language speakers are starting to appear. In El Salvador, Nawat was the language of several tribes: Nonualcos, Cuscatlecos, Mazahuas, and Izalcos. The name Pipil for this language is used

by the international scholarly community, chiefly to differentiate it more clearly from Nahuatl (Wiki).

"This little handbook is concerned with the area that now comprises eastern and southern Guatemala, all of El Salvador, and most of Honduras. Here Nawat was spoken and, in isolated mountain communities, still is. This Nawat-speaking area, loosely organized politically where tribal warfare was a frequent occurrence, was then called Kuskatlán (Land of Precious Things) by the natives. They called themselves Pipil (children) because they considered themselves to be the chosen children of the gods. The Nawat language, sometimes called Pipil, may properly be described as a close dialect of Nahuatl" (Introduction)

I-IX X-XIV, 1 2-957 958. First edition. Mouton Grammar Library 1. Bibliography, pp. [943]-957. This appears to be the first extensive dictionary of the language.

"The native language of Western El Salvador... is known in the linguistic literature as Pipil, although its speakers call it *na:wat* in the language itself and *Nahuate* in Spanish... Chapter 5 contains the Pipil-Spanish-English dictionary [pp. 148-594] representing the two main dialects, Ciushanhat (C) and Santa Domingo de Guzmán (SD), with occasional forms from other dialects. Chapter six is the Spanish-Pipil dictionary [pp. [594]-865]... The fieldwork, collection of data, and analysis upon which this work is based were done during several stays in Pipil territory in the years from 1970 to 1976... The work was completed, it should be pointed out, before the recent upsurge in violence and political turmoil, and should therefore have no political consequences. Nevertheless, given the sensitivities on all sides of the conflict and the potential for misunderstanding, it seems wisest for the sake of all who worked with me to present no more specific information about speakers, but rather in its place to offer the deepest hope for improved conditions and an end to violence... Today Pipil is little used, spoken by only a few, elderly people in a small number of towns... The exact number of speakers is unknown, since many are reluctant to be identified as speakers. This is due to distrust conditioned by Pipil experience in recent history, not the least of which was the so-called 'matanza' or massacre of Indians in 1932 coupled with the government decree that Indian languages could no longer legally be spoken. Thus only very rough estimates of the number of speakers are available. In most villages only two or three elderly individuals still speak the language... In any case, the language is quite moribund, with no fully fluent younger speakers. While census and other official reports sometimes place the number as high as 2,000, my own guess is that it is much lower, perhaps as low as 200. Formerly, Pipil was spoken in a wide area including scattered locations from Guatemala to Panama... It is now extinct everywhere except for these few places in El Salvador."

**[PITCAIRN-NORFOLK]** Pitkern (also Pitcairnese) is a creole language based on an 18th-century dialect of English and Tahitian. It is a primary language of Pitcairn Island, though it has more speakers on Norfolk Island. Unusually, although spoken on Pacific Ocean islands, it has been described as an Atlantic Creole. Following the Mutiny on the *Bounty*, the British mutineers stopped at Tahiti and took eighteen Polynesians, mostly women, to remote Pitcairn Island and settled there. Initially, the Tahitians spoke little English, and the *Bounty* crewmen knew even less Tahitian. Isolated from the rest of the world, they had to communicate with each other, and, over time, they formed a unique new language that blended a simplified English with Tahitian words and speech patterns. In the mid-19th century, the people of Pitcairn resettled on Norfolk Island; later some moved back. Most speakers of Pitkern today are the descendants of those who stayed. Pitkern and Norfuk dialects are mutually intelligible (Wiki).

"In 1790 the mutineers of the *Bounty*, with their Polynesian companions, who were mostly Tahitian arrived on the uninhabited island of Pitcairn in the general South-Pacific Ocean, and settled there. In 1856 the island's entire population was evacuated to Norfolk Island, roughly a thousand miles east of Brisbane. ...On both islands the Pitcairnese languages, a mixture of English and Tahitian, has survived, although in slightly different forms, which may be distinguished as *Pitcairnese* and *Norfolk*. ... [Pitcairnese offers a unique case in the field of General Linguistics because] since Pitcairn was uninhabited when the settlers arrived, the actual birth of a language can be witnessed and its history followed through to the present day.... A few collections of stray Pitcairnese and Norfolkese words have been published., but this book is the first serious linguistic study of the two languages" (from the jacket copy).

"The Norfolk Islanders (and their Pitcairn ancestors before them) have spoken English, of a good and proper style, for generations. But among themselves, and with others they like or trust, their language is a glorious patois: a made-up language, compiled from pieces of English and Tahitian and from natural responses to the natural surrounding they live in. The Norfolk Language - or the Pitcairnese Language, or 'Norfolk', or 'Pitcairn', or 'deep Norfolk', whatever it may be called - is a living language with subtlety, precision, wit, and power. Until this splendid, years-long effort by Beryl Nobbs, no serious work has ever been published that proposed spellings for Norfolk words....Her work may be the foundation-stone of a written Norfolk Language at last" (Foreword, Ed Howard). "The Norfolk Island patois, which originates from the mutineers of H.M.S. 'Bounty' and their Tahitian wives, is freely spoken among us, their descendants....Apart from our patois, we also have a number of local dishes, some of

which I have mentioned. All of these recipes and more may be found in the Norfolk Island Cookery Book, published by the Sunshine Club...to raise money for the aged and needy" (p. ii). A Pitcairn word-list by Anders Kallgard was published by in Sweden in 1991 by the University of Goteborg (58 pp.)

**[PLAINS INDIAN SIGN LANGUAGE]** Plains Indian Sign Language (PISL), also known as Plains Sign Talk, Plains Sign Language and First Nation Sign Language, is a trade language (or international auxiliary language), formerly trade pidgin, that was once the lingua franca across central Canada, central and western United States and northern Mexico, used among the various Plains Nations. It was also used for story-telling, oratory, various ceremonies, and by deaf people for ordinary daily use. It is falsely believed to be a manually coded language or languages, however there is not substantive evidence establishing a connection between any spoken language and Plains Sign Talk. The name 'Plains Sign Talk' is preferred in Canada, with 'Indian' being considered pejorative by many. Hence, publications and reports on the language vary in naming conventions according to origin (Wiki).

With a detailed introduction giving the history of the origin of the dictionary.

"[T]he necessity for intercommunication between tribes having different vocal speech developed gesture speech, the sign language I have described, so that the many-tongued hordes of the vast sea-like prairies can at least be credited with perfecting and beautifying the language, which...formed the vehicle for the expression of the budding thoughts of primitive man on this continent.... Even in my comparatively short experience with the Indians, I have observed the birth, growth, and death of many gestures.... Could this work have been illustrated, it would have added greatly to the facility of understanding and making the gestures, for it is extremely difficult to describe the most simple movements of the hands in space, so that a person who had never seen the movements would, by following the descriptions, make the correct motions" (Introductory)

"By far the most authoritative work on Indian Sign Language was by Captain Wm. Philo Clark, U. S. Army. He was with the army in the Indian country from 1875 to 1880, and made a deep study of sign, with the result that in 1880 he was detailed by his

commanding general to devote his time exclusively to the production of a book on same. He worked steadily on its preparation until 1884, when he died. The work was published in 1885, a small edition, and is now out of print and extremely difficult to obtain. It was not illustrated. This being America's leading authority on Indian sign, and differentiating as to the true Indian and deaf and dumb codes, the author has consulted it extensively..." With a brief history of previous published studies of Plains Indian Sign Language on p. [3]. Also issued in buckram and in limp leather.

"When a boy, from 1884 to 1889, the author lived on the edge of the Sioux Indian Reservation in Dakota Territory...He worked on a cow range and associated continuously with Indians. He learned some of the Sioux language, and made a study of sign. Since then, for many years, the interest has continued, and all known authorities on sign have been studied, as well as continued investigation with Blackfoot, Cheyenne, Sioux, Arrapahoe, and other Indians of recognized sign-talking ability. Of later years this effort has been inspired by the fact that there does not exist today any publication in print...covering exclusively the so-called Universal Indian Sign Language of the Plains Indians of North America... It is probably the first American language...It may be the first universal language produced by any people...It has a beauty and imagery possessed by few, if any, other languages" (Introductory Notes).

"[Tomkins' work] is compendious, concise, contains over 400 line drawings, and being written for schoolboys is simple and clear and avoids speculations in favor of information... [A]s an introduction I have found it effective and more useful than any of the earlier but less complete books... His work seems centered on the Western Dakota" (Kroeber, *IJAL*, 24, 1958).

"The present Grammar of the language of the Wapogoro, along with tales and a German-Pogolo and Pogolo-German Dictionary, is the result of four years of work. Anyone who has ever attempted to record a hitherto unwritten language is well aware of the difficulty of such a task, and what enormous patience is required to draw forth from untutored minds unaccustomed to abstract thought and reflection, the rich treasure of their concepts, words and forms. Moreover the native does not so easily reveal his language to what seems to him a profane foreigner. Like all his customs and habits, including those negative customs and habits, the language of his fathers is something holy, which he conceals to himself and only reluctantly reveals to the researcher.... The

Chipogoro reproduced here is the dialect spoken in Vigoi and Issongo, for almost every valley has its one peculiarities" (Foreword, tr: BM)

Tambobong [Luzon, Philippines]: Pequeña Impr. del Asilo de Heurfanos de Nuestra Señora de Consolación, 1892. 8vo, pp. 184, [4]; original printed wrappers bound in; contemporary full blind-stamped calf. An Ayer Linguistic duplicate, with a Newberry release stamp on the presentation bookplate of Edward Everett Ayer on the front pastedown. This is a dictionary and grammar of Spanish– Kanaka (a dialect of the Western Caroline Islands, particularly in Ponapé or Ascension), by a Capuchin friar of the province of Castille of the Sacred Heart. It is the same province in charge of Capuchin missions in Spanish colonies in Ultramar, including the Philippines; (bookseller's description: Rob Rulon-Miller). Includes Spanish-Kanaka [Pohnpeian], pp. [39]-152.

[**POLCI**] Polci (Pəlci, Posə) is an Afro-Asiatic language of Nigeria. It is part of the Barawa cluster, which is in turn part of the West Chadic language family. The Polci language is one of six dialect clusters of the Zaar subgroup of the Barawa branch of the Chadic languages. The Polci dialects are Zul, Baram, Dir, Buli, Nyamzak/Langas, and Polci proper. An extinct dialect called Luri was possibly dialect of Polci as well, but it is not well attested (Wiki).

[**POLYNESIAN LANGUAGES: POLYGLOT**] The Polynesian languages are a language family spoken in geographical Polynesia and on a patchwork of "Outliers" from south central Micronesia, to small islands off the northeast of the larger islands of the Southeast Solomon Islands and sprinkled through Vanuatu. They are classified as part of the Austronesian family, belonging to the Oceanic branch of that family. Polynesians share many unique cultural traits that resulted from about 1000 years of common development, including common linguistic development, in the Tonga and Sāmoa area

through most of the first millennium BC. There are approximately forty Polynesian languages. The most prominent of these are Tahitian, Sāmoan, Tongan, Māori and Hawaiian. Because the Polynesian islands were settled relatively recently and because internal linguistic diversification only began around 2,000 years ago, their languages retain strong commonalities. There are still many cognate words across the different islands e.g. tapu, ariki, motu, kava (Kava culture), and tapa as well as Hawaiki, the mythical homeland for some of the cultures (Wiki).

**1979:** [LILLYbm] *Captain Cook's South Sea Island vocabularies*, by Peter A. Lanyon-Orgill. London: published by the author, 1979. Original blue cloth over boards, lettered in gold. Pp. *i-iv v-xv xvi*, 1-287 288. First edition, with list of original subscribers. Includes scores of early, partially unpublished, word lists, generally English based, of South Sea Island vocabularies. This is an original subscription copy.

"The early printed editions of Captain Cook's voyages contain an extensive Tahitian vocabulary and a few words collected from other Pacific islands by William Anderson, the surgeon's mate, but these published record form only a small part of the linguistic remains preserved in manuscripts... Apart from the Tahitian vocabulary those from other islands—Easter Island, the Marquesas, Tonga, Malekula, Tanna, New Caledonia and contains not only a complete critical version of the Cook vocabularies, but also... includes edited copies of the other contemporary records, especially of Tahitian, made by the French and Spanish explorers. A vast corpus of valuable linguistic material, much of it in manuscript and hitherto virtually unknown, as well as many rare printed sources, is brought together for the first time" (from advertising leaflet loosely inserted in book, inviting subscriptions to the first edition).

[**POM**] Pom is an Eastern Malayo-Polynesian language spoken on Miosnum Island in Cenderawasih Bay west of Serui Island, in Papua Province of Western New Guinea, northeastern Indonesia (Wiki).

Ethnologue: pmo.

**1961:** see under **TRANS-NEW GUINEA LANGUAGES: POLYGLOT.**

[**POMO, CENTRAL**] Central Pomo is one of the seven Pomoan languages spoken in Northern California. It is currently an endangered language, with fewer than 10 speakers. Pre-contact speakers of all the Pomoan languages have been estimated at 8,000 altogether. This estimation was from the American anthropologist Alfred Kroeber. "The Central Pomo language was traditionally spoken from the Russian River southwest of Clear Lake to the Pacific coast. There were settlements along the Russian River (in the southern Ukiah Valley, in Hopland Valley, and further south near the Sonoma County line), in the coastal region (at Manchester, Point Arena, and at the mouth of the Gualala River), and in the region between the two (around Yorkville and in Anderson Valley)" (Wiki).

[**POMO, EASTERN**] Eastern Pomo, also known as Clear Lake Pomo, is a nearly extinct Pomoan language spoken around Clear Lake in Lake County, California by one of the Pomo peoples. It is not mutually intelligible with the other Pomoan languages. Prior to contact with Europeans, it was spoken along the northern and southern shores of Clear Lake to the north of San Francisco, and in the coast mountains west of Sacramento Valley. Eastern Pomo shared borders in the north with the Patwin and the Yuki languages, in the south with the Lake Wappo, the Wappo, the Southeastern Pomo, the Southern Pomo, the Central Pomo, the Northern Pomo, and the Lake Miwok. They also shared a border to the west with the Northern Pomo. The southern and northern areas in which Eastern Pomo was spoken were geographically separate, and apparently represented differing dialects, split by certain lexical and phonological differences. Contemporary Eastern Pomo speakers refer to the north shore dialect area as Upper Lake, and the south shore dialect area as Big Valley (Wiki).

Ethnologue: peb. Alternate Names: Clear Lake Pomo.

**1907-1930:** see Vol. 14 under **INDIGENOUS LANGUAGES OF NORTH AMERICA: POLYGLOT**.

[**POMO, NORTHERN**] Northern Pomo is an extinct Pomoan language formerly spoken around Clear Lake in Lake County, California by the Habematolel Pomo of Upper Lake, one of the several Pomo peoples. The Northern Pomo language became extinct in 2005 with the death of Elenor Stevenson Gonzales.

[**POPOLOCA DE SAN JUAN ATZINGO**] Southern Popoloca is an indigenous language of Puebla state, Mexico. There are two principal varieties, sometimes counted as distinct languages,

1) San Juan Atzingo Popoloca (aka Atzingo, San Juan); and 2) Metzontla Popoloca (aka Los Reyes Metzontla Popoloca) (Wiki).

Serie de vocabularios y diccionarios indigenas "Mariano Silva y Aceves", no. 25. Includes Popoloca-Spanish, pp. 3-67, and Spanish-Popoloca, pp. 71-103.

"The present dictionary of Popoloca of Oluta is more extensive than the vocabulary of Popoloca of Sayula published in 1960, which is a simple compilation of the most common words of the language presented in the form of a list... At the end of the present dictionary there are appendices which should be of great linguistic value. Appendix A includes a concordance of the words referring to the flora and fauna of the region" (The Purpose of this Dictionary, tr: BM).

[**POPOLUCA, SAYULA**] Sayula Popoloca, also called Sayultec, is a Mixe language spoken by around 4,000 indigenous people in and around the town of Sayula de Alemán in the southern part of the state of Veracruz, Mexico. Almost all published research on the language has been the work of Lawrence E. Clark of the Summer Institute of Linguistics. More recent studies of Sayula Popoloca have been conducted by Dennis Holt (lexico-semantics) and Richard A. Rhodes (morphology and syntax), but few of their findings have been published. 'Popoloca' is the Castilian alteration of the Nahuatl word *popoloca*, meaning 'barbarians' or 'people speaking a foreign language'. In Mexico, the name 'Popoloca' is a traditional name for various Mixe-Zoquean languages, and the name 'Popoloca' is a traditional name for a totally unrelated language belonging to the Oto-

Manguean languages. Natively it is known as yamay ajw 'local language' or tucmay-ajw 'language of the home' (Wiki).

"This work is based on the efforts of the linguist Raymond Zinn, who lived in San Luis Jilotepeque between 1964 and 1968" (Acknowledgements, tr: BM). "The dictionary reflects the Pokomam language as spoken in the city of San Luis Jilotepeque, in the east of the state of Jalapa.... There are approximately 8,000 Pokomams in the municipality of San Luis Jilotepeque" (Introduction, tr: BM).

[**POQOMCHI'**] Poqomchi' (Pokomchi, Poqomchii') is a Mayan language spoken by the Poqomchi' Maya of Guatemala, and is very closely related to Poqomam. Its two main dialects, eastern and western, were spoken by 90,000 or so people in the year 2000, in Purulhá, Baja Verapaz, and in the following municipalities of Alta Verapaz: Santa Cruz Verapaz, San Cristóbal Verapaz, Tactic, Tamahú and Tukurú. It is also the predominant language in the municipality of Chicamán (El Quiché), which borders Alta Verapaz (Wiki).

The five languages involved in the study [Tondano, Tonse, Tombulu, Tontemboan, and Tonsawang] are spoken in the Minahasa region of North Celebes, Indonesia. The reconstructed parent language is called Proto-Minahasan" (Introduction).

**[PROTO-POLYNESIAN]** Proto-Polynesian (abbreviated PPN) is the hypothetical proto-language from which all the modern Polynesian languages descend. Historical linguists have reconstructed the language using the comparative method, in much the same manner as with Proto-Indo-European and Proto-Uralic. This same method has also been used to support the archaeological and ethnographic evidence which indicates that the ancestral homeland of the people who spoke Proto-Polynesian was in the vicinity of Tonga, Samoa, and nearby islands (Wiki).

Ethnologue does not list Proto-Polynesian.

[PULAAR] Pulaar is a Fula language spoken primarily as a first language by the Fula and Toucouleur peoples in the Senegal River valley area traditionally known as Futa Tooro and further south and east. Pulaar speakers, known as Haalpulaar'en live in Senegal, Mauritania, the Gambia, and western Mali. According to Ethnologue there are several dialect differences, but all are inherently intelligible. Pulaar is not to be confused with Pular, another variety of Fula spoken in Guinea (including the Fouta Djallon region). The Pulaar and Pular varieties of Fula are to some extent mutually intelligible, but require a separate literature. Pulaar is written in a Latin script, but historically was written in an Arabic script known as "Ajami script" (Wiki).

[**PULAR**] Pular is a Fula language spoken primarily by the Fula people of Fouta Djallon, Guinea. It is also spoken in parts of Guinea-Bissau, Sierra Leone, and Senegal. There are a small number of speakers in Mali. Pular is spoken by 2.5 million Guineans, about 28% of the national population. This makes Pular the most widely spoken indigenous language in the country. Substantial numbers of Pular speakers have migrated to other countries in West Africa, notably Senegal. Pular is not to be confused with Pulaar, another Fula language spoken natively in Guinea, Senegal, Mauritania, and western Mali (including the Futa Tooro region). Pular is written in the Ajami script and the Latin script (Wiki).

[PURARI] Purari is a Papuan language of Papua New Guinea. Purari is also known as Koriki, Evorra, I'ai, Maipua, and Namau. "Namau" is a colonial term which means "deaf (lit.), inattentive, or stupid (Williams 1924: 4)." Today people of the Purari Delta find this

term offensive. F.E. Williams reports that the "[a]n interpreter suggests that by some misunderstanding the name had its origin in the despair of an early missionary, who, finding the natives turned a deaf ear to his teaching, dubbed them all 'Namau.'" (Williams 1924: 4). Koriki, I'ai, and Maipua refer to self-defining groups that make up the six groups that today compose the people who speak Purari. Along with the Baroi (formerly known as the Evorra, which was the name of a village site), Kaimari and the Vaimuru, these groups speak mutually intelligible dialects of Purari (Wiki).

[**PURISIMEÑO**] Purisimeño was one of the Chumashan languages traditionally spoken along the coastal areas of Southern California near Lompoc. It was also spoken at the La Purisima Mission. A vocabulary of "La Purissima or Kagimuswas (Purismeno Chumash)" was collected by Henry Wetherbee Henshaw in 1884. John P. Harrington also documented the language, and wrote a sketch of the grammar. Dr. Timothy Henry of the Western Institute for Endangered Language Documentation (WIELD) created [an on-line] dictionary of the language (Wiki).

**[Q'EQCHI']** The Q'eqchi' language, also spelled Kekchi, K'ekchi', or kekchí, is one of the Mayan languages, natively spoken within Q'eqchi' communities in Guatemala and Belize. At the time of the Spanish conquest of the Americas, Q'eqchi' was probably spoken by fewer people than neighboring languages such as Itza', Mopan, and Cholti', all of which are now moribund or extinct. The main evidence for this fact is not colonial documents, but the prevalence of loan words apparently stemming from these languages in Q'eqchi'. However, a number of factors made Q'eqchi' do better than the just-mentioned languages. One is the difficult mountainous terrain which is its home. Another is that, rather than simply being conquered, as the Cholti', or resisting conquest for an extended period, as the Itza' did for over 200 years, the Q'eqchi' came to a particular arrangement with the Spaniards, by which Dominican priests, led initially by Fray Bartolome de las Casas, were allowed to enter their territory and proselytize undisturbed, whereas no lay Spaniards were admitted. This led to their territory being renamed "Verapaz" (true peace) by the Spaniards, a name which continues today in the Guatemalan departments Alta Verapaz and Baja Verapaz. This relatively favorable early development allowed the people to spread, and even make war on neighboring Mayan groups. Although it was later followed by the brutal policies of the late-19th-century liberals and the late-20th century military governments, it largely explains the status of Q'eqchi' as the 3rd largest Mayan language in Guatemala and the 4th across the Mayan region. The relatively recent, postcolonial expansion is also the reason that Q'eqchi' is perhaps the most homogeneous of the larger Mayan languages. Q'eqchi is taught in public schools through Guatemala's intercultural bilingual education programs (Wiki)..

**[QIMANT]** The Qimant language is a highly endangered language spoken by a small and elderly fraction of the Qemant people in northern Ethiopia, mainly in the Chilga woreda in Semien Gondar Zone between Gondar and Metemma. The language belongs to

the western branch of the Agaw or Central Cushitic languages. Other (extinct) members of this branch are Qwara and Kayla. Along with all other Cushitic languages, Qimant belongs to the Afro-Asiatic language family. Qimant is the original language of the Qemant people of Semien Gondar Zone and Ethiopia. Although the ethnic population of the Qemant was 172,327 at the 1994 census, only a very small fraction of these speak the language nowadays. All speakers live either in Chilga woreda or in Lay Armachiho woreda. The number of first-language speakers is 1625, the number of second language speakers 3450. All speakers of the language are older than 30 years, and more than 75% are older than 50 years. The language is no longer passed on to the next generation of speakers. Most ethnic Qemant people speak Amharic. Qimant is not spoken in public or even at house as a means of day communication any more, but is reduced to a secret code (Wiki).

[**QUECHAN**] Quechan or Kwtsaan, also known as Yuma, is the native language of the Quechan people of southeastern California and southwestern Arizona in the Lower Colorado River Valley and Sonoran Desert. Quechan belongs to the River branch of the Yuman language family, together with Mohave and Maricopa languages. Publications have documented Quechan grammar and texts. In 1980, it was estimated that there were fewer than 700 speakers of the language, including both the elderly and young. Hinton (1994:32) put a conservative estimate of the number of speakers at 150, and a liberal estimate at 400-500. As of 2009, 93 preschoolers were learning Quechan in the Quechan tribe's language preservation program, and the number of fluent speakers was estimated to be about 100. A Quechan dictionary was in progress. Quechan speakers participate in the Yuman Family Language Summit, held annually since 2001 (Wiki).

"America offers the sad spectacle that native tribes disappear from the face of the earth without leaving the slightest trace of their previous existence. No monument of art, not even the crudest and simplest artifact, indicates they once lived. No burial mound decks the earthly remains of what was perhaps once a feared and powerful race. Wild animals pull the corpse of the last chief from the protective lap of the earth and his shattered and scattered bones are bleached by the sun and molder to dust and decay. The language of the tribe, even its name, are lost. A race has disappeared from the page of world history without leaving a trace, having cast only a shadow upon it, but unable to impress its likeness there; the past world scarcely knew it, the world to come will hardly realize it once existed. The powerful pressure of peoples from the East, with its blessings

and curses, has destroyed countless races in an incredibly short time, particularly in North America. But even more powerful nations, in spite of offering some resistance to the destructive force of that culture and its customs, will soon face a total transformation of their very nature, even if they have not yet been totally destroyed. Mexico, Central America and South America offer examples.... Languages, the greatest cultural treasure of nations, are particularly hard hit by these developments and hasten toward a sad decline. Although it is difficult to stem the tide of this dissolution, in most cases it is possible to erect a monument to such languages; of course, in order to be of value, since it is no longer possible to do so during the age in which the language fully bloomed, this must be undertaken before the language has totally faded. This I have attempted in the present work for the Kechuan language, the ancient language of Peru, based on all available material and upon years of study in living intercourse with the people" (Foreword, tr: BM).

[**QUILEUTE**] Quileute /'kwilɨju:t/, also known as Quillayute /kwɪ'leɨju:t/, was the last Chimakuan language, spoken until the end of the 20th century by Quileute and Makah elders on the western coast of the Olympic peninsula south of Cape Flattery at La Push and the lower Hoh River in Washington State, United States. The name Quileute comes from kʷoʔlí·yot' [kʷoʔlé:jot'], the name of a village at La Push. Quileute is famous for its lack of nasal sounds, such as [m], [n], or nasal vowels, an areal feature of Puget Sound. Quileute is polysynthetic and words can be quite long. There were ten elderly speakers in 1977, and "a few" in 1999. The Quileute Nation is attempting to prevent the loss of the language by teaching it in the Quileute Tribal School, using books written for the students by the tribal elders (Wiki).

[**RABHA**] Rabha is a Sino-Tibetan language of India. The two dialects, Maituri and Rongdani, are divergent enough to cause problems in communication. According to U.V. Jose, there are three dialects, viz. Róngdani or Róngdania, Mayturi or Maytura and Songga or Kocha (page ix). Jose writes that "the Kocha dialect, spoken along the northern bank of the Brahmaputra, is highly divergent and is not intelligible to a Róngdani or Mayturi speaker" (page ix). Jose also writes that "[t]he dialect variations between Róngdani and Mayturi, both of which are spoken on the southern bank of the Brahmaputra, in the Goalpara district of Assam and belong to the northern slopes of Meghalaya, are minimal" (pages ix-x). Jose concludes the paragraph on dialectal variation with: "The Róngdani-Mayturi dialectal differences become gradually more marked as one moves further west" (page x). In 2007, U.V. Joseph published a grammar of Rabha with Brill in their series Languages of the Greater Himalayan Region (Wiki).

Languages of the greater Himalayan region. Rabha-English vocabulary, pp. [705]-843. Includes bibliographical references (p. [857]-858).

"The work is dual in nature. It is both descriptive and correlative. The descriptive part involves an analysis of Rabha, and the correlative part aims at a synoptic view of Rabha, Bodo and Garo, all of which belong to a close-knit group of Tibeto-Burman languages.... As there does not exist any comprehensive dictionary of word list of Rabha, it was felt that all the data that were collected should be included in the lexicon" (Introduction).

"The grammar and dictionary of Rabha is a reworked version of the author's doctoral dissertation, defended at Decan College in Pune on the 1<sup>st</sup> of November 1999. The Rabha language and people are mentioned by the earliest Western sources on the region. Yet this hefty volume is the first thorough description of this important but now endangered language of northeastern India" (Editorial Foreword).

[**RADE**] Rade (; Rade: klei Êđê; Vietnamese: tiếng Ê-đê or tiếng Ê Đê), is a Malayo-Polynesian language of southern Vietnam. There may be some speakers in Cambodia. Bih [considered a dialect of Rade as of 2016], which has about 1,000 speakers, may be a separate language. Tam Nguyen (2015) reported that there are only 10 speakers of Bih out of an ethnic population of about 400 people. A patrilineal Ede subgroup known as the Hmok or Hmok Pai is found in the Buôn Ma Thuột area (Phạm 2005:212) (Wiki).

[**RAMA**] Rama is one of the indigenous languages of the Chibchan family spoken by the Rama people on the island of Rama Cay and south of lake Bluefields on the Caribbean coast of Nicaragua. Other indigenous languages of this region include Miskito and Sumu (Craig 1992). Rama is one of the northernmost languages of the Chibchan family (Craig 1990:293). The Rama language is severely endangered. Their language was described as "dying quickly for lack of use" as early as the 1860s (Pim & Seemann 1869:280). By 1980, the Rama were noted as having "all but lost their original ethnic language", and had become speakers of a form of English creole instead (Craig 1990:293). In 1992, only approximately 36 fluent speakers could be found among an ethnic population of 649 individuals in 1992 (Craig 1992). The number of speakers on Rama Cay island was only 4 in 1992. There have been several language revitalization efforts. The fieldwork for the first dictionary of Rama [but see **1914** below] was done during this time by Robin Schneider, a graduate student from the University of Berlin (Rigby & Schneider 1989) [see below] (Wiki).

"The expedition I undertook to Central America and Mexico in the years 1907-1909 under the general auspices of the Royal Museums in Berlin... was intended, in addition to archeological and ethnological studies, to rescue for scholarship certain languages, which, like Rama, Guatuso, Subtiaba, Matagalpa, Sumo, Cacaopera, Lenca and Chilanga, among others, face almost certain extinction in the near future. I spared no pains in penetrating to the most distant Indian tribes to record their speech....The most important result of my stay on Rama Island (in March 1909) was the observation that the Rama Indians are the closest living relatives of the Guatuso Indians on the Rio Frio (in Costa Rica) , whom they call 'wild Ramas', corresponding to the 'Valientes' of earlier authors....The Rama Indians, who since 1857 were baptized and taught English by the missionary J. P. Jürgensen, now number at most 250 souls on Rama Cay. On the shore opposite, near Punta Gorda, live around 15-20 heathen Ramas, and 10-15 live on Uirin

[**RAPA NUI**] Rapa Nui or Rapanui (English /ræpə'nu:i/; locally: ['rapa 'nu.i]) also known as Pascuan /'pæskju:ən/, or Pascuense, is an Eastern Polynesian language spoken on the island of Rapa Nui, also known as Easter Island. The island is home to a population of just under 4,000 and is a special territory of Chile. According to census data, there are about 3,700 people on the island and on the Chilean mainland who identify as ethnically Rapa Nui. Census data do not exist on the primary known and spoken languages among these people and there are recent claims that the number of fluent speakers is as low as 800. Rapa Nui is a minority language and many of its adult speakers also speak Spanish; most Rapa Nui children now grow up speaking Spanish and those who do learn Rapa Nui begin learning it later in life (Wiki).

**[REJANG]** Rejangese (Rejangese: Baso Jang/Baso Həjang, pronounced as baso jaŋg/baso dzaŋg, baso həjaŋg/baso hədzaŋ ) is an Austronesian languages predominantly spoken by the Rejangese people in southwestern height of Sumatra (Bengkulu), Indonesia. There are five dialects, spread from mountainous region to the coastal region of Bengkulu, including the Cu'up dialect, the Lebong dialect, the Payang dialect, the Rawas dialect, and the Utara dialect (Pəsisia). Rejangese was written with the Rejang script for a long time. The script is thought to pre-date the introduction of Islam to the area in the 12th century CE, although the earliest attested document has been dated to the mid 18th century. It is traditionally written on bamboo, buffalo horn, bark or copper plates. It was only recently that the Latin alphabet was introduced as a way of writing the language (Wiki).

**[RENNELLESE SIGN LANGUAGE]** Rennellese Sign Language is an extinct form of home sign documented from Rennell Island in 1974. It was developed about 1915 by a deaf person named Kagobai and used by his hearing family and friends, but apparently died with him; he was the only deaf person on the island, and there never was an established, self-replicating community of signers. Accordingly, as of January 2016, its ISO 639-3 code has been proposed for retirement (Wiki).

This is a presentation copy, inscribed by the author on the title page: "Prof. Raymond Firth | with compliments | from Rolf Kuschel". Raymond William Firth [1901-], a noted social anthropologist, was the author of many works on ethnology and religion, including the *Tikopia-English Dictionary* (Oxford University Press, 1985).

"This publication is a presentation and discussion of 217 signs from a unique sign language created on Rennell, a Polynesian outlier island in the Solomon Islands. It is unique in that it was developed by the only deaf-mute on the island interacting effectively with his fellow islanders. According to oral traditions extending 24 generations back, the island has never before known deaf-borns or deaf-mutes, and until World War II the community had had but slight contact with the world outside, so the sign language must have arisen spontaneously, as the result of a suddenly emerged need for communication... As until 1957 Kagobai had not set foot outside of his native island and no other individual using sign language had visited the island, the Rennellese sign language has emerged and developed under no outside influence... The data were collected ...from 14<sup>th</sup> to 16<sup>th</sup> March 1972 and, again, from 3<sup>d</sup> to 4<sup>th</sup> July 1972... A total of 217 words were recorded. However, I would estimate them to constitute only a modest portion of the deaf-mute's actual signs in stock" (Foreword).

"The vocabulary and the comparative lists on these pages constitute appendices I and II of the author's thesis entitled *A Grammar of Resigaro*... submitted for the Ph.D at St. Andrews University in Escocia in 1975" (Prologue, tr: BM). "Resígaro is a language spoken by a small group of people who live on the banks of a branch of the Amazon River in the north of Peru. In 1915, Whiffen calculated there were about 1,000 Resígaros living among [the other tribes]." (Introduction, tr: BM).

[**RÉUNION CREOLE FRENCH**] Réunion Creole or Reunionese Creole (Réunion creole: kréol rénioné, French: créole réunionnais) is a creole language spoken on Réunion. It is derived mainly from French and includes a number of terms from other languages (Malagasy, Hindi, Portuguese, Gujarati and Tamil). In recent years, some groups have tried to come up with a spelling dictionary and grammar rules but there is still no official version. Partly because of the lack of an official orthography but also because schools are taught in French, Réunion Creole is rarely written. Notably, two

Asterix translations into it have been published. Réunion Creole is the main vernacular of the island and is used in most colloquial and familiar settings. It is however in a state of diglossia with French as the high-language - that is to say, Réunion Creole is used in informal settings and conversations, while French is the language of writing, education, administration and more formal conversations (Wiki).

Having been called upon to give definitions for various creole words, to offer a key to certain expressions that mystified the European readers of my poems, I have desired, for some time now, to offer, in black on white, a lexicon of the Ile Bourbon" (p. 5, tr: BM).

**[ROMANI LANGUAGES]** Romani (/ˈrɒməni/; also Romany, Gypsy, or Gipsy; Romani: romani čhib) is any of several languages of the Romani people belonging to the Indo-Aryan branch of the Indo-European language family. According to Ethnologue, seven varieties of Romani are divergent enough to be considered languages of their own. The largest of these are Vlax Romani (about 500,000 speakers), Balkan Romani (600,000), and Sinte Romani (300,000). Some Romani communities speak mixed languages based on the surrounding language with retained Romani-derived vocabulary – these are known by linguists as Para-Romani varieties, rather than dialects of the Romani language itself. The differences between various varieties can be as big as, for example, differences between various Slavic languages (Wiki).

Balkan Romani. Romani-French, pp. [91]-134. A reissue of his *Grammaire, dialogues et vocabulaire de la langue romane ou des sigans* (1861), with a new title-page. The introduction was never issued, hence pagination begins at 35. A scarce issue, the first issue is quite rare.

**1870:** [LILLYbm] *Études sur les Tchinghianés; ou, Bohémiens de l'Empire ottoman*, by Alexandre G. Paspatis [Alexandros Georgiou Paspates]. Constantinople: Imprimerie Antoine Koroméla, 1870. Original patterned maroon cloth over boards, lettered in gold. Pp. I-VII VIII-X XI-XII, 1 2-652. First edition. Zaunmüller, col. 408. Black 3084. This copy with detailed annotations in pencil, mostly providing English equivalents for the vocabulary, and "words not in index", "extra words" and "words to be noted" on all endpapers. Includes Turkish Gypsy-French, pp. [127]-652.

"The first part of this work concerns the wandering, vagabond life of the gypsies, the misery, degradation and brutality of which is not met with in any other known nomadic race, and whom neither hunger, poverty, or lack of adequate clothing deter from this wandering life. The gypsies do not appear to feel hunger and pain to the same degree as

civilized people... In order to study their language I observed a group of sedentary gypsies whose tents I entered. On my first visit I was met with great distrust, but this soon dissipated. and I received easily the information I desired on all sides" (Preface, tr: BM).

**1982:** [LILLYbm] *Lexique tsigane: dialecte des Erlides de Sofia*, by Georges Calvet, Georges. Paris: Publications orientalistes de France, 1982. 110 p.; 21 cm. Original blue and white wrappers, lettered in white and blue. First edition.

"The present lexicon is based on an analysis of the vocabulary of an extremely limited corpus: ten tales collected by Mr. Bernard Gilliat-Smith from a single informant, Mr. Pasi Suljoff, a Moslem gypsy living in Sofia. The tales were collected between 1909 and 1910 and published in the "Journal of the Gypsy Lore Society." This dialect belongs to a group of dialects of Balkan Romani....The external influences are essentially Turkish and Bulgarian" (Introduction: tr: BM).

**1988:** [LILLYbm] *A glossary of Greek Romany as spoken in Agia Varvara (Athens)*, by Gordon M. Messing. Columbus, Ohio: Slavica Publishers, 1988. Original white wrappers, lettered in blue. Pp. 1-5 6-175 176. First edition. Includes Greek Romany-English, pp. [39]-140, and an English-Greek Romany index, pp. [141]-175. First extensive vocabulary of this dialect of Balkan Romani.

"The glossary presented here incorporates words and phrases used by members of a community of Greek gypsies who live in Agia Varvara, a suburb of northwest Athens, roughly between Athens and Piraeus. These gypsies are rather sedentary, living in hovels or small apartments in what is rather a poor area of the city ... It is hard to estimate their numbers, but there are certainly several hundred families with a great many children....My research is based on three separate sojourns in Greece, beginning in 1973-4 and continued in 1978 and 1981" (Preface).

**1999:** [LILLYbm] *Gypsy-English / English-Gypsy Concise Dictionary*, by Atanas Slavov. New York: Hippocrene Books, 1999. Original stiff pink wrappers, lettered in black and gray, with a colored illustration on front cover. Pp. i-iv v vi, 1-229 230-234. First edition. Includes Gypsy-English, pp. 17-133, and English-Gypsy, pp. 135-229.

"The vocabulary of present day Romany, like other Balkan languages, is a symbiosis of original Romany words, and aspects of Turkish, Bulgarian and Greek. Different authors claim the existence of more than a dozen Gypsy dialects in Bulgaria. Bulgarian Gypsies speaking one dialect though are easily understood by Gypsies speaking other dialects as well as by Gypsies from all over the world. This dictionary reflects the vocabulary of two Bulgarian Gypsy dialects: the Sofia Erli dialect and the dialect of the Christian Gypsies of Sliven.... Aside from the well known academic works this dictionary has been compiled from several unwritten sources, the first one being the author's collection of Sophia street jargons and student slang from the 1940s which contains more than a 1,000 entries of Gypsy language origin" (Introduction).

It was not published during his lifetime and is printed here for the first time.

[**ROMANI, CARPATHIAN**] Carpathian Romani, also known as Central Romani or Romungro Romani, is a group of dialects of the Romani language spoken from southern Poland to Hungary, and from eastern Austria to Ukraine. North Central Romani is one of a dozen of major dialect groups within Romani, an Indo-Aryan language of Europe. The North Central dialects of Romani are traditionally spoken by some subethnic groups of the Romani people (Gypsies) in Hungary, the Czech Republic, Slovakia (with the exception of its southwestern and south-central regions), southeastern Poland, the Transcarpathia province of Ukraine, and parts of Romanian Transylvania. There are also established outmigrant communities of North Central Romani speakers in the United States, and recent outmigrant communities in the United Kingdom, Ireland, Belgium, and some other Western European countries (Wiki).

This copy with the French language bookplate of Charles Kheil, undoubtedly Karl Petr Kheil [1843-1908], author of *Neme...ko-...esky slovník* (Prague 1877), a German-Bohemian dictionary of commercial products, and an important historian of book-keeping. Puchmayer had himself co-authored a German-Bohemian dictionary in 1821.

"Towards the end of the year 1819 a band of gypsies numbering 17 people was detained in the village of Wranowitz, and because their papers looked suspicious the men were sent off to Pilsen to be interrogated, while their wives and children were held in Radnitz. The present modest volume exists thanks to ten weeks of interchanges with these people, among whom a small but intelligent boy about the age of twelve stood out" (Foreword, tr: BM).

[**ROMANI, SINTE**] Sinte Romani (also known as Sintenghero Tschib(en), Sintitikes or Romanes /'rɔmənɪs/) is the variety of Romani spoken by the Sinti people in Germany, France, Austria, some parts of northern Italy and other adjacent regions. It is characterized by significant German influence and is not mutually intelligible with other forms of Romani. Romani is sometimes written as Romany (often in English) but native speaking people use the word Romani for the language. The language is written in Latin script and is included in Indo-European, Indo-Aryan and Indo-Iranian language groups (Wiki).

**1863:** [LILLYbm] *Die Zigeuner in ihrem Wesen und in ihrer Sprache*, by Richard Liebich. Leipzig: F. A. Brockhaus, 1863. Contemporary (original?) dark green cloth over boards, decorated in blind, spine lettered in gold. Pp. I-VII VIII-XII, I-3 4-272. First edition. Zaunmüller, col. 407. Black 2566, Macfie, p. 85, Phillips 293, Hohmann, p. 30. Includes Romani-German, pp. 125-168, and German-Romani, pp. 171-264. Liebich spent over thirty years dealing with crime and criminals in Germany, learning both thieves' cant and the language of the gypsies. He emphasized the fact that the gypsies spoke a true language of their own, and not simply a variant of thieves' jargon.

"With regard to the lexical material collected, the author has been equally careful. He refused to accept any authority, rejecting all verba magistri, and even Pott's comprehensive and all-encompassing work was read, and studied, only after the author had established a firm foundation for his research on the basis of his *own* observation. For the existence and validity of every word included in the dictionary, the author has at least three gypsy witnesses standing at his side, and any exception is clearly noted" (Foreword, tr: BM).

"In the present work I have attempted to arrange and record the entire lexical material of the German Gypsy dialect as collected by various compilers. In addition to completeness I have striven for accuracy... For every word that appears in Pott's dictionary or in Miklosich's I have given the relevant reference to the work in questions, since I felt it would be desirable to have my work serve in part as an alphabetical index to Pott and Miklosich, insofar as they treat the German Gypsy dialect. The newer material from Pischel is also indicated in this way. The German Gypsy dialect is divided into two types, based on their particular pronunciation—a western dialect and an eastern. The first of these is the most wide-spread, the German Gypsy dialect in the narrower sense" (Foreword, tr: BM).

**1940:** [LILLYbm] *Einführung in die mitteleuropäische Zigeunersprache, mit Wörterverzeichnis*, by Eduard Hrkal. Leipzig: Otto Harrassowitz, 1940. Original brown wrappers, lettered in black. With loosely inserted printed errata slip, with manuscript addition of one further correction, also entered by hand on p. 94, probably by the author.

"Up to now we have lacked a generally accessible introduction to the Gypsy language, which should be of interest not only to philologists, but also other professions (for example the police). This little book hopes to fill this gap. Of course we cannot include all the various Gypsy dialects (Miklosich identified 13 different European variants). On the other hand, the description of a single dialect would not fulfill the needs we are addressing... We want to take into account all the dialects spoken in the German linguistic area. This includes the Czech, Slovak, Hungarian, Polish and Transylvanian Gypsies... [However], the German dialect is the primary basis [for the vocabulary] and only essential differences in other dialects are noted" (Foreword, tr: BM).

"The present dictionary of Romani is not a collection of all the words and variants in the European dialects, but is limited to those of what one must now call the former Yugoslavia area, and in particular its eastern areas .... It was originally planned to produce a type of normative dictionary that could serve as a prelude to a yet to be created standard form of Romani in general. After careful consideration, however, the authors came to the conclusion that such a goal is difficult to realize at the present time. The standardization of the language is primarily a task for the Romani intellectuals themselves. Here outsiders can only create additional problems" (Introduction, tr: BM).

**[ROMANI, TAVRINGER]** Scandoromani (Swedish: romani, Norwegian: romani, Scandoromani: romani rakripa alt. tavringerens rakripa[6][7]), also known as Tavringer Romani and the Tattare language, is a North Germanic based Para-Romani. It is spoken by the Scandinavian Travellers, a Romani minority community, in Norway (ca. 100–150 elderly speakers), and formerly in Sweden and Denmark. "Scandoromani" is a term coined by academics. In Sweden, Scandoromani is referred to as resande rommani (Traveller Romani) or svensk rommani (Swedish Romani), while in Norway the same language is known as norsk romani (Norwegian Romani). Like Angloromani in Britain and Caló (Spanish Romani) in Spain, Scandoromani draws upon a (now extinct) vocabulary of inflected Romani. Much of the original Romani grammar, however, has been lost to the users, and they now communicate in Swedish or Norwegian grammar. There is no standardised form of Scandoromani, so variations exist in vocabulary, pronunciation, and usage, depending on the speaker. In print, Scandoromani words are often written with Swedish (S) or Norwegian (N) letters (ä, æ, ø, å) and letter combinations to represent Romani sounds, e.g., tj- (/tʃ/) or kj- (/ç/ alt. /tʃ/) to represent the Romani č /tʃ/ and čh /tʃʰ/ (Wiki).

**[ROMANI, VLAX]** Vlax Romani is a dialect group of the Romani language. Vlax Romani varieties are spoken mainly in Southeastern Europe by Romani people. Vlax Romani can also be referred to as an independent language or as one dialect of the Romani language. Vlax Romani is the most widely spoken dialect subgroup of the

Romani language worldwide. Most Vlax Romani speakers live in Bosnia-Herzegovina (300,000) followed by Romania (241,617), Albania (60,000) and Colombia (4,850) (Wiki).

**[ROTUMAN]** Rotuman, also referred to as Rotunan, Rutuman or Fäeag Rotuma, is an Austronesian language spoken by the indigenous people of the South Pacific island group of Rotuma, an island with a Polynesian-influenced culture that was incorporated as a dependency into the Colony of Fiji in 1881. Classification of Rotuman is difficult due to the large number of loan words from Samoan and Tongan, as a result of much cultural exchange over the history of the Pacific. Linguist Andrew Pawley groups the language with the West Fijian languages in a West Fijian – Rotuman branch of the Central Pacific

sub-group of Oceanic languages. The Rotuman language has sparked much interest with linguists because the language uses metathesis to invert the ultimate vowel in a word with the immediately preceding consonant, resulting in a vowel system characterized by umlaut, vowel shortening or extending and diphthongisation. Unlike its Pacific neighbours, Rotuman is typically considered an AVO (agent–verb–object) Language (Wiki).

This copy inscribed in ink on the front free endpaper: "From the author / C. M. Churchward. / 20/9/40." Churchward was for sixteen years (1921-1937) a missionary in Fiji and Rotuma and translated the whole of the New Testament into Rotuman.

"Apart from the brief *Notes on Rotuman Grammar* published by the late Mr. A. M. Hocart in the *Journal of the Royal Anthropological Institute* in 1919..., this is the first Grammar and Dictionary of the Rotuman language ever published; and for the good reason that no one else has been so qualified to do this work as Mr. Churchward, who had the advantage not only of a long residence on the island, but also of a sound linguistic training, as well as a natural aptitude for this class of work... The Dictionary... is not just a list of native words with the corresponding nearest English words... Thus, Mr. Churchward... has frequently to take us into the thought of the Rotumans or to refer briefly to some of their customs. For example, *fiu'aki*, to place in a canoe and send adrift, refers (he informs us) to the punishment formerly meted out to persons guilty of adultery" (Preface, A. P. Elkin, Editor of *Oceania*). "This treatise is the result of the writer's study of the language of Rotuma (a small island lying about 300 north of Fiji) during a period of over fourteen years (1922-1936), about six of which... were actually spent on the island" (Introduction). "The present Rotuman language appears to be the result of a fusion of several earlier languages. The writer's opinion is that it shows two Polynesian... strata, A Melanesian... stratum which antedates them both, a slight admixture of Micronesian... and some important elements which are peculiarly Rotuman and which it seems reasonable to ascribe to an earlier language still,... the Aboriginal... substratum" (Origin and History of the Language). This edition was reprinted by AMS in 1978.

[**ROVIANA**] Roviana is a member of the North West Solomonian branch of Oceanic languages. It is spoken around Roviana and Vonavona lagoons at the north central New Georgia in the Solomon Islands. It has 10,000 first-language speakers and an additional 16,000 people mostly over 30 years old speak it as a second language (Raymond 2005). In the past, Roviana was widely used as a trade language and further used as a lingua franca especially for church purposes in the Western Province but now it is being replaced by the Solomon Islands Pijin. Few published studies on Roviana language

include: Ray (1926), Waterhouse (1949) and Todd (1978) contain the syntax of Roviana language. Corston-Oliver (1996 & 2002) discuss about the ergativity in Roviana. Todd (2000) and Ross (1988) discuss the clause structure in Roviana (Wiki).

Waterhouse was the author of *The effect of superphosphate on the wheat yield in New South Wales*, Sydney, W.A. Gullick, government printer, 1913, and was presumably the author's brother.

"In preparing this useful Roviana-English Dictionary of some 3,600 words Mr. Waterhouse has done a useful work for the Western Districts of the British Solomon Islands Protectorate which will be of great assistance to Government Officials and others desirous of acquiring a knowledge of the Roviana language" (R. R. Kane, Resident Commissioner, British Solomon Islands). "The Zinama Roviana is the dialect of the Roviana Lagoon at the N.W. corner of New Georgia...Mainly perhaps, through the operations of the Methodist Mission, the dialect in question has now spread far beyond its original boundaries...[and] it is already in a fair way to become the *lingua franca* of the Western Solomons...Considerable attention has been devoted to the section at the end of the dictionary giving the names of Natural History objects...Perhaps one of the most deplorable features of modern native life is the disappearance of so much of the lore of bush and reef that added a zest to the daily round" (Preface). [**RUNDI**] Kirundi, also known as Rundi, is a Bantu language spoken by nine million people in Burundi and adjacent parts of Tanzania and Congo-Kinshasa, as well as in Uganda. It is the official language of Burundi. Kirundi is mutually intelligible with Kinyarwanda, an official language of Rwanda, and the two form part of the wider dialect continuum known as Rwanda-Rundi. The inhabitants of Rwanda and Burundi belong to several different ethnic groups: Hutu including Bakiga and other related ethnicities (84%), Tutsi, including Hima (15%), and Twa (1%) (a pygmy people). The language naturally or natively belongs to the hutu, although the other ethnic groups present in the country such as Tutsi, Twa, and Hima among others have adopted the language. Neighboring dialects of Kirundi are mutually intelligible with Ha, a language spoken in western Tanzania. Kirundi is frequently cited as a language where Meeussen's rule, a rule describing a certain pattern of tonal change in Bantu languages, is active (Wiki).

Includes Sa'a & Ulawa-English, pp. 3-115, English-Sa'a & Ulawa index, pp. 117-136, and the Lord's Prayer in nineteen different Melanesian languages, pp. 155-156.

"The two languages, Sa'a and Ulawa, ...belong to one of the Melanesian groups of the Oceanic family of languages. Ulawa is the language spoken in the ten villages of the small island of Ulawa, the Contrariété Island of the charts, in the southeast Solomons. Sa'a is spoken in its purity in the village of the same name, the last inhabited place on the southeast extremity of the large island of Malaita, which lies some thirty miles west of Ulawa....The two languages are evidently from a common stock and are so closely

allied that it has been found quite possible in the present work to adjust the various details to the same scheme of treatment, both as to grammar and vocabulary....The number of persons who live on Ulawa and who speak Ulawa is not more than 1,200 at the outside; ...Sa'a may be said to be the principal language of Little Malaita [with 4,000 or 5,000 speakers]....This is the first essay toward the dictionary of any Solomon Island language" (Preface).

[**SAAROA**] Saaroa or Hla'alua is a Southern Tsouic language is spoken by the Saaroa (Hla'alua) people, an indigenous people of Taiwan. It is a Formosan language of the Austronesian family. The Saaroa live in the two villages of Taoyuan and Kaochung in Taoyuan District (Taoyuan Township), Kaohsiung City, Taiwan (Zeitoun & Teng 2014). With fewer than 10 native speakers and an ethnic population of 400 people, Saaroa is considered critically endangered. Even among native speakers of the language, they use primarily Mandarin or Bunun in their daily lives. There is no longer an active speech community for Saaroa (Wiki).

"French travelers and researchers in Indochina first noted the Saek in the late nineteenth and early twentieth centuries. Largely impressionistic, their short word lists and brief grammars can be found in [list of five sources between 1895 and 1919]... Saek continues to be of great interest to specialists in Tai linguistics.... Gedney conducted research on Saek in a series of field trips in 1964, 1965, 1966, 1968, and 1976.... With the hegemony of the Thai and Lao language today, the status of the Saek language remains in doubt, most young speakers seeing greater opportunities, both economically and otherwise, in Thai and Lao. Saek has no native writing system" (Introduction).

[**SAHAPTIN**] Sahaptin (also Shahaptin), Sháptənəxw, is a Plateau Penutian language of the Sahaptian branch spoken in a section of the northwestern plateau along the Columbia River and its tributaries in southern Washington, northern Oregon, and southwestern Idaho, in the United States. Many of the tribes that surrounded the land were skilled with horses and trading with one another. The Yakama tribal cultural resources program has been promoting the use of the traditional name of the language, Ichishkíin Sínwit, instead of Sahaptin, which means "stranger in the land." Sahaptin has four dialects in a dialect cluster:

Northern Sahaptin group

Northwest Sahaptin dialect cluster: Klickitat (Klikitat) (Yakama name: Xwálxwaypam or L'ataxat), Tainapam (Taidnapam / Táyt napam or Upper Cowlitz), Upper Nisqually (Meshal / Mashel or Mica'l, also known as Mishalpam), Yakima (Yakama) (Lower or Yakama proper, autonym: Mámachatpam), Kittitas (Upper Yakama, autonym: Pshwánapam or Pshwanpawam)

Northeast Sahaptin dialect cluster: Wanapum (Wanapam) (Wánapam), Palouse (Palus) (Yakama name: Pelúuspem), Lower Snake (Chamnapam, Wauyukma, and Naxiyampam), Walla Walla (Waluulapan)

Southern Sahaptin group (Columbia River cluster): Umatilla (Rock Creek Indians, Yakama name: Amatalamlama; Imatalamlama), Skin-pah (Sk'in tribe or Sawpaw, also known as Fall Bridge and Rock Creek people or K'milláma, a Tenino subtribe; perhaps another Yakama name for the Umatilla, who were known as Rock Creek Indians), Tenino (Tygh Valley dialect of the Tygh (Taih, Tyigh or Tayxłáma) or "Upper Deschutes", Celilo dialect of the Wyam (Wayámłáma) (Yakama name: Wayámpam) or "Lower Deschutes", also known as "Celilo Indians", Tenino dialect of the Dalles Tenino or "Tinainu (Tinaynułáma)"; John Day dialect of the Dock-Spus (Tukspush or Takspasłáma) or "John Day.") (Wiki).

Ethnologue divides Saphaptin into four separate languages: 1) Tenino: tqn, 2) Umatilla: uma, 3) Walla Walla: waa, and 4) Yakama: yak.

[SAHO] The Saho language (Tigrinya: ሳዕዳ) is an Afro-Asiatic language spoken in Eritrea, Sudan and Ethiopia. It belongs to the family's Cushitic branch. Saho is spoken natively by the Saho people. They traditionally inhabit territory in Eritrea bounded by the bay of Erafayle in the east, the Laasi Ghedé valleys in the south, and the Eritrean highlands to the west (Akele Guzai, Shimejana). This speech area is bordered by other Afro-Asiatic-speaking communities, with Tigre speakers on the west and Afar speakers on the east. In Ethiopia, Saho or Assawort is primarily spoken in the Tigray Region. It has about 200,000 speakers in total and four main dialects: Asawurta, Toroa Minifero, Eda, Tabota Hazu Hasabat-ara and Irob. Saho is so closely related to the Cushitic Afar language, spoken as a mother tongue by the Afar people, that some linguists regard the two tongues as dialects of a single "Saho–Afar language" (Wiki).

Ethnologue: ssy. Alternate Names: Sao, Shaho, Shiho, Shoho.

An Italian-Saho dictionary appeared in 1914.

"The Dictionary of the Saho language is based almost exclusively on the texts I collected on my travels to the land of the Sahos and in Massaua from the mouths of native Sahos. . . . How much further we will have come in our research on African languages if the travelers who present the results of their linguistic research during their travels in Africa in the form of a word-list, would instead give us a few conversations or short tales from the natives along with precise translations. The scholar of linguistics can't gain much more from word-lists than would a botanist presented with a sack filled with leaves from trees and shrubs and so on from Africa in the belief that he would then have all he needed to determine with scientific precision the exact nature of the flora of the countries in which those travels had taken place" (Foreword, vol. 2, tr: BM).

[SAHU] Sahu (Sa'u, Sahu'u, Sau) is a Papuan Halmahera language. Use is vigorous; dialects are Pa'disua (Palisua), Tala'i, Waioli, and Gamkanora. A fifth dialect, Ibu, used to be spoken near the mouth of the Ibu River (Wiki).

[**SAISIYAT**] Saisiyat is the language of the Saisiyat, a Taiwanese indigenous people. It is a Formosan language of the Austronesian family. It has approximately 4,750 speakers. The language area of Saisiyat is small, situated in the northwest of the country between the Hakka Chinese and Atayal regions in the mountains (Wufeng-hsiang, Hsinchu, Nanchuang-hsiang, Miaoli). There are two main dialects: Ta'ai (North Saisiyat) and Tungho (South Saisiyat). Ta'ai is spoken in Miao-Li and Tungho is spoken in Hsinchu. Kulon, an extinct Formosan language, is closely related to Saisiyat but is considered by Taiwanese linguist Paul Jen-kuei Li to be a separate language. Today, one thousand Saisiyat people do not use the Saisiyat language. Many young people use Hakka or Atayal instead, and few children speak Saisiyat. Although Saisiyat has a relatively large number of speakers, the language is endangered (Wiki).

[**SAKA**] (Eastern) Saka or Sakan is a variety of Eastern Iranian languages, attested from the ancient Buddhist kingdoms of Khotan, Kashgar and Tumshuq in the Tarim Basin, in what is now southern Xinjiang, China. It is a Middle Iranian language. The two kingdoms differed in dialect, their speech known as Khotanese and Tumshuqese. Documents on wood and paper were written in modified Brahmi script with the addition of extra characters over time and unusual conjuncts such as ys for z. The documents date from the fourth to the eleventh century. Tumshuqese was more archaic than Khotanese, but it is much less understood because it appears in fewer manuscripts compared to Khotanese. Both dialects share features with modern Pashto and Wakhi. The language was known as "Hvatanai" in contemporary documents. Many Prakrit terms were borrowed from Khotanese into the Tocharian languages. The Saka language became extinct after invading Turkic Muslims conquered the Kingdom of Khotan in the Islamicisation and Turkicisation of Xinjiang (Wiki).

The extinct language Saka is not listed in Ethnologue.

"Our knowledge of [Saka] is derived from numerous fragments of Buddhist literature, and from a series of documents. The latter, which seem to belong to the eighth century A.D., have not hitherto been satisfactorily interpreted....there are some indications to show that the language had begun to be used in writing in the second century A.D" (Introduction). The 13<sup>th</sup> edition of the Encyclopedia Britannica stated: "Nothing is known of the language or race of the Sakas."

[**SALIBA**] Saliba is an Oceanic language spoken on the islets off the southeastern tip of Papua New Guinea. There are approximately 2,500 speakers of Saliba. Significant documentation of the language was undertaken by the Saliba-Logea documentation project, and hundreds of audio-video resources can be found in the project archive (Wiki).

[**SALINAN**] Salinan was the indigenous language of the Salinan people of the central coast of California. It has been extinct since the death of the last speaker in 1958. The language is attested to some extent in colonial sources such as Sitjar (1860), but the principal published documentation is Mason (1918) [see below]. The main modern grammatical study, based on Mason's data and on the field notes of John Peabody Harrington and William H. Jacobsen, is Turner (1987), which also contains a complete bibliography of the primary sources and discussion of their orthography. Two dialects are recognized, Antoniaño and Migueleño, associated with the missions of San Antonio and San Miguel, respectively. Antoniaño is "sometimes also termed Sextapay, associated with the area of the Franciscan Mission of San Antonio de Padua in Monterey County." [2] There may have been a third, Playano dialect, as suggested by mention of such a subdivision of the people, but nothing is known of them linguistically. Salinan may be a part of the hypothetical Hokan family. Edward Sapir included it in a subfamily of Hokan, along with Chumash and Seri. This classification has found its way into more recent encyclopedias and presentations of language families, but serious supporting evidence for this subfamily has never been presented (Wiki).

Original gray wrappers, lettered in black (lacking rear wrapper, front wrapper present but detached). Xix p., [9]-53, + 2 pp. advertisements. First edition, with additional title page in Spanish. Shea's Library of American Linguistics VII. Not in Zaubmüller. Spanish-San Antonio Mission.

This copy with "Philological Society" in ink on upper right front wrapper, and an ink stamp inside front wrapper indicating it was withdrawn from the library of King's College, London. According to Sabin, one hundred copies were printed in octavo, and ten in quarto. First extensive printed vocabulary of Salinan.

"This volume is, like the Matsun grammar, printed from a manuscript forwarded to the Smithsonian Institution... The Mission of San Antonio de Padua was founded in 1771, in the sierra of Santa Lucia, twenty-five leagues south-southwest of Monterey, the Rev. Father Bonaverture Sitjar and Father Miguel Pieras, the authors of this vocabulary, being

the first missionaries. The name of the tribe is given by Duflot de Mofras and elsewhere, as Tatché or Telamé, though Mr. Taylor styles it Sextapay. As however he gives the same name San Antonio Sextapay in a list of the ranches of the Matsun mission of Soledad, I have hesitated to give any name whatever on the title page of this work... Less than fifty Indians still remain, although it is said they were once so numerous that the dialects amounted to twenty."

Includes thematically-arranged Salinan-English vocabulary, pp. 121-154. Most complete vocabulary of the language published to date; reprinted by Kraus in 1964.

"This study of the dialects composing the Salinan linguistic group was begun in September, 1910, when I made a visit to the neighborhood of the old Mission of San Antonio in Monterey County, where live the few remaining members of this group... This collection was begun more than a century ago with the preparation of a vocabulary and phrase-book of the language of the Indians of Mission San Antonio by the founder of the Mission, Fray Buenaventura Sitjar. The manuscript was sent to Washington by the indefatigable A. S. Taylor and published by J. G. Shea [see above]. All [other] early vocabularies have been examined and compared, but with the exception of Sitjar's they are of small value.... The Salinan language comprises the two surviving dialects of the missions of San Antonio and San Miguel. These two dialects are mutually intelligible with little difficulty" (Introduction).

"The Salinan language has been adequately presented by J. A. Mason and there is little more that can be done with this language unless vocabularies of the long-extinct coastal dialects should unexpectedly turn up" (*The Mission Indian vocabularies of Alphonse Pinart*, edited by R. F. Heizer. Berkeley and Los Angeles: University of California Press, 1952, p. 1).

[**SALISH LANGUAGES**] The Salishan (also Salish) languages are a group of languages of the Pacific Northwest in North America (the Canadian province of British Columbia and the American states of Washington, Oregon, Idaho and Montana). The Salishan languages are a geographically continuous block, with the exception of the Nuxalk (Bella Coola), in the Central Coast of British Columbia, and the extinct Tillamook language, to the south on the central coast of Oregon. The terms Salish and Salishan are used interchangeably by linguists and anthropologists studying Salishan, but this is confusing in regular English usage. The name Salish or Selisch is the endonym of the Flathead Nation. Linguists later applied the name Salish to related languages in the Pacific Northwest. Many of the peoples do not have self-designations (autonyms) in their languages; they frequently have specific names for local dialects, as the local group was more important culturally than larger tribal relations. All Salishan languages are considered critically endangered, some extremely so, with only three or four speakers left. Those languages considered extinct are often referred to as 'sleeping languages,' in that no speakers exist currently. In the early 21st century, few Salish languages have

more than 2,000 speakers. Fluent, daily speakers of almost all Salishan languages are generally over sixty years of age; many languages have only speakers over eighty (Wiki).

Ethnologue lists 26 different languages under the Salish family.

The bulk of the information was provided by John Adams who was about eighty years old in 1952... As a boy he hunted, fished, and camped throughout the area with older Suquamish men who told him the

names of the places and how the places had been used in earlier times... The dictionary contains only words that I have heard from my informants. More lexical material from Southern Puget Sound Salish may be found in ethnographic publications on Puget Sound Indians" (Introduction).

[**SALISH, STRAITS**] North Straits Salish [Straits Salish] is a Salish language which includes the dialects of: Lummi (aka Xwlemi'chosen, x<sup>w</sup>ləmiʔčósən) (†); Saanich (aka SENĆOTEN, səŋčáθən, séŋəčqən); Samish (aka Siʔneməš) (†); Semiahmoo (SEMYOME) (aka Tah-tu-lo) (†); T'sou-ke or Sooke (aka T'sou-ke, čawk) (†); Songhees (aka Lək<sup>w</sup>əŋíŋəŋ or Lekwungen or Songish), three speakers (2011). Although they are mutually intelligible, each dialect is traditionally referred to as if it were a separate language, and there is no native term to encompass them all. North Straits, along with Klallam, forms the Straits Salish branch of the Central Coast Salish languages. Klallam and North Straits are very closely related, but not mutually intelligible (Wiki).

"In December of 1983 I was... invited... to join in a discussion of the possibility of linguistic fieldwork with a speaker of the Samish dialect of Straits Salish. This was exciting news because the Samish dialect was thought to have become extinct 20 or even 30 years ago; no tapes were known to have been made of this dialect and only a small sample of words had been transcribed... The Straits language (or Straits Salish) was aboriginally spoken by peoples along the north shore of the Olympic Peninsula from Clallam Bay to Port Discovery... It was and is spoken in both the state of Washington and the province of British Columbia. It now comprises two languages: Northern Straits and Clallam (most consider these separate languages). Northern Straits includes the following dialects: Sooke, Songish, Saanich, Lummi, and Samish.... Samish speakers aboriginally 'dominated a cluster of islands around Samish and Guemes Islands'... Until 1983 linguists had thought that the last speakers of Samish were dead. Ken Hansen, chairman of the Samish Tribe, ... had learned of a man living in British Columbia who still spoke Samish fluently... He was indeed fluent and speaks both the Saanich dialect and the Samish dialect fluently at winter ceremonies and spirit dances. I was free to work with him until Sept. 1984" (Preface).

**1991:** [LILLYbm] *Saanich, North Straits Salish Classified Word List*, by Timothy Montler. Hull, Quebec: Canadian Museum of Civilization, 1991. Original pink, green, and pale green wrappers, lettered in green. 171 pp. First edition. Mercury Series,

Canadian Ethnology Service Paper No. 119. Includes both Saanich-English and English-Saanich indices. This is the first dictionary of this dialect. Second copy: IUW.

"A semantically classified list of over 2800 words in the Saanich dialect of North Straits Salish, an Amerindian language spoken on Vancouver Island in British Columbia." "There are now [1991] fewer than thirty fluent speakers of Saanich. The youngest is in his fifties."

[**SAMA-BEJAW LANGUAGES**] The Sama–Bajaw languages are a well established group of languages spoken by the Bajau and Sama peoples of the Philippines, Indonesia and Malaysia. They are mainly spoken on Borneo and the Sulu Archipelago between Borneo and Mindanao.

Grimes (2003) identifies nine Sama–Bajaw languages:

Balangingi (Bangingi'; Northern Sama)

Central Sama (Siasa Sama)

Southern Sama (Sinama)

Pangutaran Sama

Mapun (Kagayan)

Yakan

Abaknon (Inabaknon)

Indonesian Bajau

West Coast Bajau

The first seven are spoken in the Sulu region of the Southern Philippines. Indonesian Bajaw is spoken mainly in Sulawesi and West Coast Bajaw in Sabah, Borneo. Several dialects of the languages can be identified (Wiki).

Ethnologue: lists nine individual languages under Sama-Bejaw.

"Since Adriani's article in 1900 the study of the language of the Bajos in the Indonesian region hardly made any headway. The study was almost limited to a few small word lists. It is because of this scantiness that I venture to divulge my materials and remarks..... Although it was my first purpose to write about the Sama language, yet many not directly linguistic peculiarities are given, especially in the Notes. They are connected with the history, wanderings and customs of this people of fishermen and former pirates. These elements left clear imprints on the language in general and on the speech of different communities" (Preface).

[**SAMBA**] Samba is a Bantu language spoken in Kwilu District, Democratic Republic of the Congo.

Ethnologue: smx. Alternate Names: Shankadi, Tsaam, Tsamba, Usamba.

[**SAMBURU**] Samburu is the Eastern Nilotic, North Maa language spoken by the Samburu in the highlands of northern Kenya. The Samburu number about 128,000 (or 147,000 including the Camus/Chamus). Samburu is closely related to Camus (88% to 94% lexical similarity; Camus is sometimes considered a Samburu dialect) and to the South Maa language Maasai (77% to 89% lexical similarity). The word Samburu itself derives from the old Maa word 'saamburr' for the leather bag the Samburu use (Wiki).

[**SAMOAN**] Samoan (Gagana fa'a Sāmoa or Gagana Sāmoa — IPA: [ŋa'ŋana 'sa:moa]) is the language of the Samoan Islands, comprising the Independent State of Samoa and the United States territory of American Samoa. It is an official language — alongside English — in both jurisdictions. Samoan, a Polynesian language, is the first language for most of the Samoa Islands' population of about 246,000 people. With many Samoan people living in other countries, the total number of speakers worldwide is estimated at 510,000 in 2015. It is the third most widely spoken language in New Zealand, where more than 2% of the population - 86,000 people - were able to speak it as of 2013. The language is notable for the phonological differences between formal and informal speech as well as a ceremonial form used in Samoan oratory (Wiki).

**1862:** [LILLY] *A Samoan dictionary: English and Samoan, and Samoan and English; with a short grammar of the Samoan dialect*, by George Pratt [1817-1894]. Samoa: printed at the London Missionary Society's Press, 1862. iv p., 1 l., [5]-223 p. 22 cm. Original purple unlettered cloth, with original light yellow endleaves; Lilly copy with ink title on spine: "Samoan Lexicon." Zaunmüller 334 (listing only the 4<sup>th</sup> edition of 1911). First edition. Includes English-Samoan, pp. [25]-71, Samoan-English, pp. [75]-

220, Appendix of foreign words "more or less in use among the natives," pp. 221-223, and Samoan-English addenda, p. 23. First dictionary of the Samoan language.

"No Dictionary of the Samoan dialect having been hitherto published, the present will almost of necessity be found imperfect. It comprises, however, the substance of what has been gathered during more than twenty-one years, by attention to the language as spoken by the natives....At a meeting of the missionaries in 1859, a resolution was passed that the Work should be printed. In consequence of this, it has been again revised, and eighteen hundred words have been added to Part II; and, finally, it has been revised by the Rev. A. W. Murray" (Preface).

Second edition, **1878**: [LILLYbm] *A Grammar and Dictionary of the Samoan Language*, by George Pratt. London: Trübner & Co., 1878. Original reddish-brown cloth over boards, lettered in gold. Pp. *i-iii* iv-vi *vii-viii*, *1* 2-379 380. Second edition, edited by S.J. Whitmee. Zaunmüller lists only the fourth edition. Printed in double-column. Includes English-Samoan, pp. 43-95, and Samoan-English, pp. 97-378, with addenda, p. 379. Includes a "Note by the Editor," pp. [v]-vi, which indicates that additions have been made to the grammar and placed in brackets by Whitmee.

This copy inscribed on the title page: "M. Pinard / with the editor's compliments." The editor, S.J. Whitmee, was the author of *A missionary cruise in the South Pacific being the report of a voyage amongst the Tokelau, Ellice and Gilbert Islands, in the missionary barque "John Williams" during 1870* (Sydney, 1871).

"For my own amusement in 1875 I wrote out a syntax of the Samoan Grammar...Shortly afterwards the Rev. S.J. Whitmee asked me to contribute the Samoan part of a comparative Malayo-Polynesian dictionary. I at once, with the aid of pundits, commenced revising the first edition of my dictionary, which was printed at the Samoan Mission Press in 1862 [see above]...I have been enabled to add over four thousand new words or new meanings...Mr. Whitmee has filled up, as far as possible, the scientific names of the plants and animals. Many immodest words excluded from the first edition have been admitted into this. "Tis needful that the most immodest word / Be looked upon and learn'd; which, once attained, / Comes to no further use / But to be known and hated.'" (Preface to the Second Edition).

Third edition, revised, **1893**: [LILLYbm] *A Grammar and Dictionary of the Samoan Language, with English and Samoan Vocabulary*, by George Pratt. [London]: London Missionary Society, 1893. Original olive cloth over boards, lettered in gold. Pp. *i-iii* iv-vii, *1* 2-416. Third and revised edition. Zaunmüller lists only the fourth edition. Printed in double-column. Includes Samoan-English, pp. [53]-338, and English-Samoan, pp. 344-416.

"The former editions of this work having passed out of print, in compliance with the urgent suggestions of several friends...I have now prepared a revised and enlarged edition, and have also introduced into it valuable additions which will be found of great advantage to the student of the Samoan language... In this edition...I have added 550 words to the English and Samoan part of the Dictionary. About 1300 new words or new

meanings have been added, making a total of over 12,000 words" (Preface to the Third Edition). The English-Samoan vocabulary has been moved to the back "for the convenience of Samoan students learning English." S.J. Whitmee's additions to the grammar (see the second edition) are now incorporated into the text without further acknowledgment. J. E. Newell's enlarged edition of the English-Samoan vocabulary was also published separately in this same year.

Fourth edition, enlarged and revised, **1911**: [LILLYBM] *Pratt's Grammar and Dictionary of the Samoan Language. Fourth edition, enlarged and revised*, by J[ames] E[dward] Newell. Malua, Samoa: London Missionary Society, 1911. Original green half-cloth and maroon cloth over boards, lettered in gold. Pp. [12] 1 2-131 132, 1 2-354 355-356, 1-2 3-158 159-160. Fourth edition, enlarged and revised. Zaunmüller, col. 334, listing only this edition. Samoan-English, pp. [1]-354; English-Samoan, pp. 3-158. "The late Rev. George Pratt was for upwards of forty years a Missionary of the London Missionary Society in Samoa. He was a very accomplished speaker in the vernacular, and possessed a full and remarkable knowledge of other Polynesian dialects, and was an ardent student of Hebrew and Arabic... In the present edition... I have added a considerable number of words. It is quite certain that some are not strictly Samoan in origin, but as they are now part of the spoken tongue, they have been included" (Preface).

**1879**: [LILLYbm] *Dictionnaire Samoa-Français-Anglais et Français-Samoa-Anglais précédé d'une grammaire de la langue Samoa*, by L. Violette. Paris: Maisonneuve, 1879. Later maroon cloth over boards, lettered in gold. Pp. I-VII VIII-XCII, 1 2-468. First edition. Zaunmüller, col. 334. Includes Samoan-French-English, pp. [1]-332, and French-Samoan-English, pp. [333]-466, with errata, pp. 467-468. First French dictionary of Samoa.

"The population [of the islands of Samoa] must have been larger than it is today, if one is to judge by the traces of inhabitation disseminated throughout the interior.... The Samoan is well made, with a good figure and a nice bronze coloring. He ordinarily perfumes and colors his hair, which he fixes in very diverse fashions. He is hospitable and polite; his taste for ceremony and song corresponds to something deep in his nature. He is clam, dignified, eloquent in his public assemblies treating of affairs of the country, as well as in solemn receptions. The chiefs generally proved to be firm in their maintenance of the laws and customs.... Catholicism has already changed the mores of this archipelago greatly for the better. Unfortunately the government is rather poorly organized.... For several years the whites have fostered warfare [among the tribes], and as a result of divisions among the chiefs, they have purchased cheaply a large part of the land. Soon the face of these isles will be entirely changed. What will become, within a few years, or Samoa and its indigenous population? It will no longer possess anything but a mixed population, of which the language will only imperfectly recall that of the original primitive language. It is in order to conserve this language in its integrity that we publish today a very complete work by one of the oldest Catholic missionaries who, since 1845, continues to evangelize the tribes of the Samoan archipelago" (Introduction, signed C.A., tr: BM).

**1903:** [LILLYbm] *Grammatik der Samoanischen Sprache nebst Lesestücken und Wörterbuch*, by H. Neffgen. Vienna & Leipzig: A. Hartleben's Verlag, [1903]. Original gray paper over boards, lettered and decorated in black. Pp. I-IV V-VIII, 1-167 168. First edition. Kunst der Polyglottie 79. Not in Zauhmüller. Includes German-Samoan, pp. 75-106, and Samoan-German, pp. 107-133. This work was translated into English and published in 1918. A German Samoan pocket dictionary was published by F. O. Sierich in Hamburg in 1890.

English translation **1918:** [LILLYbm] *Grammar and Vocabulary of the Samoan Language Together with Remarks on some of the Points of Similarity between the Samoan and Tahitian and Maori Languages*, by H. Neffgen, trans. from the German by Arnold B. Stock. London: Kegan Paul, Trench, Trübner & Co., 1918. Original brown cloth over boards, lettered in gold and decorated in blind. Pp. i-iii iv, 1 2-155 156. Includes English-Samoan, pp. 100-124, and Samoan-English, pp. 124-145.

**1905:** [LILLYbm] *English and Samoan Vocabulary, (O le Faasologaupe Peritania ua Faa-Samoaina.) Being Part III. Of the Grammar and Dictionary of the Samoan Language*, by J[ames] E[dward]Newell. Malua, Samoa: London Missionary Society, 1905. Original gray cloth over boards, lettered and decorated in black. Pp. 1-2 3-158 159-160. Fourth edition, enlarged and revised. Not in Zauhmüller. First separate publication of this enlarged vocabulary, which was then incorporated in the fourth edition of *Pratt's Grammar and Dictionary of the Samoan Language* in 1911.

**1942:** [LILLY] *Everyday Samoan: Samoan grammar elucidated by the use of numerous examples from ordinary conversation in the Samoan language*, by E[velyn] A. Downs. Apia, Samoa: J.W. Liston, 1942. Original brown quarter-cloth and decorated paper over boards. Libraries Worldwide: 5. First edition. This copy with the ownership signature of Sidney M. Frantz, EM1/C, U.S.N.R. **1966:** [LILLYbm] *Samoan Dictionary: Samoan-English. English-Samoan*, by G[eorge] B[ertram] Milner. London: Oxford University Press, 1966. Original black cloth over boards, lettered in gold; d.j. black and white, lettered in black, orange and white. Pp. i-vii viii-li lii, 1 2-464 465-466. First edition. Includes Samoan-English, pp. [1]-317, and English-Samoan, pp. [323]-[465]. This is a presentation copy inscribed by the author on the free endpaper: "To Professor Raymond Firth, | 'O le matua o faiva | from George Milner. K 24 January 1966." With a loosely inserted review of the dictionary by Samuel H. Elbert from the *Journal of Linguistics*. Raymond William Firth [1901- ], a noted social anthropologist, was the author of many works on ethnology and religion, including the *Tikopia-English Dictionary* (Oxford University Press, 1985). [Second copy with ink stamp: "Ex Libris Oxford University Press Canadian Branch", and ink ownership signature of William M. Mullerbeck.]

"It was evident that the Grammar and Dictionary of the Revd. Geroge Pratt (one of the pioneers of the London Missionary Society in Samoa), which had already passed through four editions (1862, 1878, 1893, and 1911), had been considerably overlaid with successive alterations and additions. After nearly a hundred years, the entire work had, moreover, both in its general plan and execution become obsolete. It was clear that something quite new and in keeping with the considerable developments which have taken place both in lexicography and gneral linguistics during the last hundred years was

ccalled for.... The task of gathering materials for this work began in Samoa in February 1955..." (Preface).

Interim edition, published in Manila, **1978**: [LILLYbm] *Samoaan Dictionary: Samoaan-English. English-Samoan*, by G[eorge] B[ertram] Milner. Manila: Samoaan Free Press, 1978. Original pale blue wrappers, lettered in black. Pp. *i-vii* viii-li *lii*, 1 2-465 466. Interim edition. "Owing to repeated requests by the citizens of Western Samoa and American Samoa for a readily available dictionary, this paper-back interim edition is presented to meet their immediate need" (dedication page). "This book contains the complete text of the original hardcover edition published by Oxford University Press" (verso of title page).

**1986**: [LILLYbm] *A Lexicon of Foreign Loan-Words in the Samoaan Language*, by Horst Cain. Cologne, Vienna: Böhlau Verlag, 1986. Original dark blue cloth over boards, lettered in white. Pp. *I-VII* VIII-XXII, 1 2-233 234. First edition. Kölner Ethnologische Mitteilungen, 7. Includes Samoaan loan words-English, pp. [1]-225, with bibliography.

"The present lexicon of foreign loan-words is meant to help all those who work with or about the Samoaan language both at a scholarly level and in everyday life. At the same time, it may contribute to making the Samoaan people more aware of the possibilities of expressing many things and ideas, unknown to them before the European arrival, in their own mother tongue as opened up by the introduction and intrusion of these foreign words.... Another conscious effort [beyond that of the early missionaries] to introduce new words and expressions into Samoaan was made by the Mormon church. This vocabulary is contained in a special list.... It is questionable whether that vocabulary has the chance of becoming more generally accepted and used, but since it is there and appears in books and other printed matter, it has been incorporated into the present work [as well]" (Preface).

"Samoaan is spoken by about 150,000 people [1986] in Western Samoa (an independent island state) and by 25,000 in American Samoa (a U.S. territory) in the South Pacific Ocean. It is a member of the Polynesian branch of the Malayo-Polynesian family of languages. The Samoaan alphabet contains only fourteen letters." (Katzner)

[**SAMOYED LANGUAGES: POLYGLOT**] The Samoyedic (/ˌsæməˈjɛdɪk, -mɔɪ-/) or Samoyed languages (/ˌsæməˈjɛd, -mɔɪ-/) are spoken on both sides of the Ural mountains, in northernmost Eurasia, by approximately 25,000 people altogether. They derive from a common ancestral language called Proto-Samoyedic, and form a branch of the Uralic languages. Having separated perhaps in the last centuries BC, they are not a diverse group of languages, and are traditionally considered to be an outgroup, branching off first from the other Uralic languages (Wiki).

Includes reprints of 17 previously published wordlists of the Samoyed languages, pp. [1]-171.

"Those who do research on the Samoyed languages have long been hampered by the fact that it has been difficult to find the Samoyed wordlists published in scattered lands at various times, some of which are extremely rare and others—for example those in Russian—hard to find under present conditions. Now the off-set techniques developed in recent years have made it possible to reproduce rare and difficult to obtain books in printed form. As far as I know, however, this technique has not previously been employed for the purposes it is here....For obvious reasons I have not included the lengthier vocabularies of Castren....I also hope at some point to collect and publish those Samoyed words published in various places which could not be effectively reproduced by the off-set method used here....The excerpts reproduced are from books in my own collection, with the exception of Mundy, Pallas and Erdmann, as well as those lists in the *Fundgruben des Orients*, for which I turned to the university library at Helsingfors" (Foreword, tr: BM).

[**SANDawe**] Sandawe is a click language spoken by about 60,000 Sandawe people in the Dodoma region of Tanzania. Language use is vigorous among both adults and children, with people in some areas monolingual. Sandawe had generally been classified as a member of the defunct Khoisan family since Albert Drexel in the 1920s, due to the presence of clicks in the language. Recent investigations however (Güldemann forthcoming) suggest that Sandawe may be related to the Khoe family regardless of the validity of Khoisan as a whole. Sandawe has two dialects, northwest and southeast. Differences include speaking speed, vowel dropping, some word taboo, and minor lexical and grammatical differences. Some Alagwa have shifted to Sandawe, and are considered a Sandawe clan. SIL International began work on Sandawe in 1996 (Wiki).

First edition. *Abhandlungen des Hamburgischen Kolonialinstituts*, Band XXXIV, Reihe B. *Völkerkunde, Kulturgeschichte und Sprachen*, Band 19. Not in Zaunmüller. Includes Sandawe-German vocabulary, pp. 39-54, as well as comparative lists of Sandawe with various Bantu languages, primarily Swahili and East Bantu, Hamitic languages, and Hottentot languages, pp. 54-70. This is the earliest extensive treatment of Sandawe vocabulary and language. The first English vocabulary is Ryohei Kagaya's *A classified vocabulary of the Sandawe language* (Tokyo, 1993) (see below).

"The Sandawe ... are a tribe of approximately 20,000 people living in the Province of Kilimatinde in German East-Africa... The Sandawe speak a language which differs totally from that of their neighbors and is striking for its use of the click sound..." (Introduction, tr: BM). "As far as I know, only a few scanty samples of the Sandawe

language have been published; a 'Versuch eines Wörterbuches für Kissandau,' was published by Nigmann in the *Mitteilungen des Seminars für Orientalische Sprachen*, (Jahrgang XII, Abteilung III, 1909)...I will not discuss what I find correct or incorrect in these materials" (Part I: On Linguistics, tr: BM).

[**SANGO**] Sango (also spelled: Sangho) is the primary language spoken in the Central African Republic. Some linguists, following William J. Samarin, classify it as a Ngbandi-based creole; however, others (like Marcel Diki-Kidiri, Charles H. Morrill) reject that classification and say that changes in Sango structures (both internally and externally) can be explained quite well without a creolization process. According to the creolization hypothesis, Sango is exceptional in that it is an African- rather than European-based creole. Although French has contributed numerous loanwords, Sango's structure is wholly African. A variety of Sango was used as a lingua franca along the Ubangi River before French colonization, in the late 1800s. The French army recruited Central Africans, causing them to increasingly use Sango as a means of interethnic communication. Throughout the 20th century, missionaries promoted Sango because of its wide usage. Originally used by river traders, Sango arose as a lingua franca based on the Northern Ngbandi dialect of the Sango tribe, part of the Ngbandi language cluster, with some French influence. The rapid growth of the city of Bangui since the 1960s has had significant implications for the development of Sango, with the creation, for the first time, of a population of first-language speakers (Wiki).

"Sango is the pidginized form of a non-Bantu ethnic languages (ca. 4500 speakers) closely related to Ngbandi whose speakers are located near Banzyville on the Ubangi River. It has become the lingua franca and virtually the national language of the Central African Republic... formerly Oubangui-Chari." (Reinecke, p. 691).

"French Congo is divided into three trade languages, Low-Congo, spoken from the coast to Brazzaville; Bangala, spoken from Brazzaville to Bangui; and Sango, spoken from Bangui to the Sultanates and to the Upper Chari... This vocabulary is intended for civil servants dealing with natives, businessmen in their commercial dealings, in short, for all Europeans who for various reasons are not able to take up the more complicated study of the particular languages of the natives of this colony... We have published [this work] without any linguistic pretensions, happy simply to have contributed in some small way to the realization of the humanitarian projects, the civilizing ideas, and the true freedom of France in the Congo" (tr: BM).

As a result, this dictionary is distinctly a preliminary effort. Every effort has been made to make accurate and reliable what has been included, but there are gaps which should be filled by further work" (Introduction).

"Sango is the lingua-franca of the Central African Republic, one of the few indigenous lingua-francas in Africa. Arising out of the Ngbandi dialects at the upper Ubangi River, it has spread throughout the country and into neighboring areas. There is a growing awareness of and pride in Sango as a national language. Although Sango does not have official status, it is used by the government, both orally and in writing, for the popular dissemination of communications of all kinds...It has not been used in public education up to the present, but it serves as a tool for basic education (by the missions) and its use in general elementary and mass education in the future is still under discussion...There is now large group of children in the capital, Bangui, who are learning Sango as a first language...and another large group who are learning only Sango as a first language, and who are not learning tribal languages at all...The figure of one million speakers of Sango seems very conservative...This grammar...is the first attempt at a complete description of the Sango language. It stands also as one of the few descriptive grammars of a creolized language in the world." From the library of Carleton T. Hodge.

"Sango, a language of the Ubangian group related to Ngbandi, is being spoken by ever larger numbers of people, as it has been chosen as the national language of Central Africa. It is already being used in towns as the language of primary education and will subsequently be employed in adult literacy programs. There are now more than a million Sango speakers, but a number of dialects persist owing to the lack of methodical, scientifically organized procedure of language spread. Its use as a language of relation has made it poor in technical, scientific (e.g., names of plants and animals) and sociological vocabulary... The author of this dictionary has, with the aid of his Central African collaborators, also proposed neologies for a certain number of terms" (English Resumé).

[**SANSKRIT: pre-1850**] Sanskrit (English pronunciation:/'sænskɪt/; Sanskrit: संस्कृतम् written in Devanagari script; IAST: Saṃskṛtam; About this sound pronunciation; IPA: [s̩əskr̩t̪əm][a] or saṃskṛta, originally saṃskṛtā vāk, "refined speech") is the primary sacred language of Hinduism and Mahāyāna Buddhism, a philosophical language in Hinduism, Jainism, Buddhism and Sikhism. It was also a literary language that was in use as a lingua franca in ancient and medieval South Asia. It is a standardised dialect of Old Indo-Aryan, originating as Vedic Sanskrit and tracing its linguistic ancestry back to Proto-Indo-Iranian and Proto-Indo-European. Today it is listed as one of the 22 scheduled languages of India and is an official language of the state of Uttarakhand. As one of the oldest Indo-European languages for which substantial written documentation exists, Sanskrit holds a prominent position in Indo-European studies. The body of Sanskrit literature encompasses a rich tradition of poetry and drama as well as scientific, technical, philosophical and religious texts. Sanskrit continues to be widely used as a ceremonial language in Hindu religious rituals and Buddhist practice in the form of hymns and chants. Spoken Sanskrit has been revived in some villages with traditional institutions, and there are attempts to enhance its popularity (Wiki).

With the ownership signature of Fitzedward Hall on the title page, and "extensively annotated by him throughout in ink, offering additional definitions in English, additional Sanskrit words and their English equivalents, and variant usages in ancient Sanskrit literature, with references. Hall was the first American to edit a Sanskrit text (*Atmabodha* and *Tattvabodha*, in 1852. He subsequently edited and published at Calcutta between 1856 and 1865 a number of pioneering editions of Sanskrit texts)" (collector's description). Hall also re-edited and annotated Wilson's own translations of Sanskrit texts, and made major contributions to the OED (1888) and Wright's Dialect Dictionary.

"The extensive cultivation of Sanscrit, during later years in Europe, has occasioned a demand for the Dictionary of that language, published in 1819, greater than was anticipated, and greater than it perhaps deserved. Copies of it are in consequence procurable with difficulty. It was my intention to have delayed the publication of a second edition, until I was prepared to offer to those engaged in the study, comprehending men of mature intellect, and eminent amongst the most distinguished scholars of the age, a work constructed on an entirely different model, and one better adapted than a mere alphabetical compilation to learned and philosophical research. Other duties and occupations have prevented the accomplishment of this object, beyond the accumulation of materials.... From the frequent applications, also, that have been made to me for copies of the original Dictionary, I am encouraged to conclude, that a more prompt, though less efficient, compilation than that which I yet hope to accomplish, will not be unacceptable" (Preface), with further extensive remarks on this edition.

"The Santal language, or Santali, as it is usually called by Anglo-Indians, is spoken by about three million people living in a strip of country to the south of the Ganges, comprising districts belong to Bengal and Bihar and Orissa in North-eastern India, and now also in northern Bengal districts up to Assam. The Santals are by far the most

numerous of the aboriginal peoples and tribes known generally as Kols, Kolarians or Mundas... The Santals first came to the parts now known as the Santal Parganas district some 150 years ago, having been called in by Paharia landlords to clear the jungle. About one hundred years ago, Europeans began to come in contact with them, missionaries being the first to take an interest in, and to study their language. The first to publish anything about... the Santal language, was... the Rev. J. Phillips, a Baptist missionary living in Orissa. In 1852 he published 'An Introduction to the Santal Language.' This work contains a grammar and a vocabulary... As a first attempt it is a creditable piece of work... In 1868, the Rev. E.L. Puxley, of the Church Missionary Society, edited 'A Vocabulary of the Santali Language.'... As far as the present writer knows, no [further] vocabulary or dictionary of the Santal language was published until Mr. Andrew Campbell's dictionary appeared in 1899.

[**SĂOTOMENSE**] Forro Creole, Săotomense or Santomense, is a Portuguese-based creole language spoken in São Tomé and Príncipe. It should not be confused with São Tomean Portuguese, the non-creolized form of Portuguese spoken in São Tomé and Príncipe. São Tomé is an island of the Gulf of Guinea, discovered by the Portuguese in the 15th century. It was uninhabited at the time, but Portuguese settlers used the island as a center of the slave trade, and there was a need for slaves in the island. Since both parties needed to communicate, a pidgin was formed. The substrate languages were from the Bantu and Kwa groups. This pidgin then became fixed (creolized) as it became the mother language of children born from Portuguese men and African women slaves. Mixed marriages were then encouraged by the Portuguese Crown, for the sake of settlement. Later because of Dutch and French pressure to gain the island, many Portuguese settlers left. Children of Portuguese and black women were, eventually, not considered African or slaves; some were considered full right Portuguese citizens. Those mixed-raced that did not have the status of Portuguese, those with darker skin, often gained a "forro" designation, because their Portuguese fathers did not want to enslave their children. The São Tomean Creole is mostly known as "Forro", the language of the freed slaves or Crioulo Santomense, not to be confused with São Tomean Portuguese (a variety and dialect of Portuguese in São Tomé and Príncipe). Portuguese is the main language for children until their early 20s, when they relearn Forro. The rich São Tomean culture also preserves a unique mixture of Portuguese and African cultures (Wiki).

[**SARAMACCAN**] Saramaccan (autonym: Saamáka) is a creole language spoken by about 58,000 ethnic African people near the Saramacca and upper Suriname Rivers, as well as in the capital Paramaribo, in Suriname (formerly also known as Dutch Guyana), 25,000 in French Guiana, and 8,000 in the Netherlands. It has three main dialects. The speakers are mostly descendants of fugitive slaves who were native to West and Central Africa; they form a group called Saamacca, also spelled Saramaka. Linguists consider Saramaccan notable because it is based on two European source languages, English (30%) and Portuguese (20%), and various west- and Central African languages (50%) but diverges considerably from all of these. The African component accounts for about 50% once ritual use is taken into account, the highest percentage in the Americas. African portions are derived from Niger-Congo languages of West Africa, especially Fon and other Gbe languages, Akan, and Central African languages such as KiKongo (Wiki).

"The language of the village of Sau in central Kunar in East Afghanistan has not as yet been systematically described. The first information about this language, which is said to be spoken in about 100 homes, was conveyed by G. Morgenstierne [*Report on a Linguistic Mission to Northwestern India*, Oslo, 1932], to whom we owe the discovery and first, and thus far only, description of the closely related language Phalāra... The only European scholar to deal with Savi linguistically was W. Lentz. According to his report, he gathered a rich store of material during his work with the German Hindu-Kush expedition of 1935. Of this, however, to the best of my knowledge, only a short word list has been published ["Zeitrechnung in Nuristan und am Pamir", *Abhandlungen der Preussischen Akademie der Wissenschaft*, 1938, Nr. 7, Berlin, 1939)]. I therefore attempted to collect samples of the language during my participation in the German Hindu-Kush expedition of 1955/56.... My only source for the material collected here was a thirty year old man named Hazrat Omar. He came from Sau...and had two wives from his home village....With regard to the place of Savi among the Dardic languages, Morgenstierne had already suggested on the basis of his scanty linguistic material that Savi was a dialect of Phalāra, influenced by Gawar-Bati. The accuracy of this supposition is thoroughly confirmed by the material presented here" (Introduction, tr: BM).

In spite of the racism of the times, clearly evident in several remarks and turns of phrase in the foreword, this work is important as the first printed vocabulary of the Gullah language.

"None of the encyclopedias mentions the Gullah Negroes, nor does the name appear in the dictionaries.... This Gullah dialect is interesting, not merely for its richness, which falls upon the ear as opulently as the Irish brogue, but also for the quaint and homely similes in which it abounds and for the native wit and philosophy of its users" (Foreword). "The Glossary included in this volume, while making no pretense to absolute accuracy, is offered as a workable list of the words in common use by the Negroes of the South Carolina coast... The following list contains some seventeen hundred words. About this vocabulary two things are to be noted: First the Gullah is entirely a spoken, never a written language; Second, these 1700 and odd words are so extended and applied according to Gullah usage as to serve the purpose and scope of at least 5,000 English words."

"The Selepet people live within the Morobe District, Territory of New Guinea. There are two dialects of the language... The Northern dialect is spoken by about 3,000 people [1970] living in ten villages... The Southern dialect is [spoken by] about 2,500 [in three villages]... The Selepet language is a non-Austronesian language belonging to the Huon Stock of languages within the Finisterrek-Huon Micro-phylum (see McElhanon, 1969)..."

[**SELKUP**] Selkup language is the language of the Selkups, belonging to the Samoyedic group of the Uralic language family. It is spoken by some 1,570 people (1994 est.) in the region between the Ob and Yenisei Rivers (in Siberia). The language name Selkup comes from the Russian "селькупский язык" (selkupsky yazyk), based on the native name used in the Taz dialect, шӧлькұмыт ӕты šöľqumyt ӕty, lit. forest-man language. Different dialects use different names. Selkup is fractured in an extensive dialect continuum whose ends are no longer mutually intelligible. The three main varieties are the Taz (Northern) dialect (тазовский диалект, tazovskiy dialekt), which became the basis of the Selkup written language in the 1930s, Tym (Central) dialect (тымский диалект, tymskiy dialekt), and Ket dialect (кетский диалект, ketskiy dialekt) (Wiki).

Castren's, *Wörterverzeichnisse aus der samojedischen Sprachen*, Petersburg, 1855.

"The only representatives of the South Samoyeds still living are the Selkups, called Ostjak Selkups in pre-revolutionary literature. According to the Soviet census of 1959 the Selkups number 3,768, yet only 50.6% of them speak their mother tongue. They live in the Siberian part of the Soviet Union between the middle Ob River and the Jenissei and along their tributaries... The Selkup lexical material of Kai Donner... has not yet been published... The "Samjojedische Wörterverzeichnisse" of M. A. Castren... was published in 1855 in St. Petersburg... T. Lehtisalo published the Selkup portion separately on the basis of the original manuscript. Castren's work is still essential for present-day scholars of the Samoyed languages, but it is already outdated" (Foreword, tr: BM).

"I had to work with a dialect that was very little investigated. No texts, no vocabulary, and no grammar of this dialect were at my disposal" (Preface). "Selkup... are the only remaining representatives of the southern Samoyeds. They are also called 'Ostjak Samoyeds.' Peter Hajdu writes about them: 'Today the majority of the Selkup

who speak their mother tongue live along the Taz and its tributaries, as well as along the Turukhan and the Yelogy" (Preface)

[**SEMAI**] Semai is a Mon–Khmer language of Western Malaysia spoken by about 44,000 Semai people. It is perhaps the only Aslian language which is not endangered, and even has 2,000 monolingual speakers. One notable aspect of Semai phonology is its highly irregular pattern of expressive reduplication, showing discontinuous copying from just the edges of the reduplicant's base, thus forming a minor syllable (Wiki).

Includes English-Central Sakai only. This is the first extensive vocabulary of the language.

"In 1909 I was able to induce a Sakai from the Gopeng district to come down to Taiping for the purpose of teaching me his language. He was what is known as a 'tame' Sakai... I made notes on all that he told me...and worked them up (with the help of my wife) into this vocabulary. But I make no claim to speaking the language. No European, not even Cerruti, has gone as far as that... 'Central Sakai' is a name given by Blagden to the speech of the aboriginal communities who inhabit the Kledang hills, Bujang Malaka, and the main range of the Malay Peninsula from the Gopeng Valley in the north to Tanjong Malim in the south... All the Central Sakai speak substantially the same language and are mutually intelligible from end to end of their country. The language that they speak is said by experts to belong to the Môn-Khmer group and to be more akin to Môn than to Khmer... Central Sakai is only one of six Môn-Khmer dialects spoken in the Peninsula... The aboriginal tribes with their varying languages and customs are the one clue we have to the ancient history of the Peninsula. At present we know so little about them that the clue cannot be followed up."

"The Sengoi are the largest group of aboriginal people on the Malay peninsula. They inhabit the main mountain range in the states of Perak and Pahang... Some government officers and anthropologists have used the terms 'Semai' or 'Semai-Senoi' to refer to those using the language of this dictionary. While these terms are useful for ethnographic purposes, they are not terms that are generally recognized by the people themselves. Instead the people... refer to themselves as 'Sengoi'.... The preliminary work on this dictionary spans many years. In 1930 Rev. Paul Means of the Methodist Missionary began the first work among the Sengoi... The first school for the Sengoi was built in 1931... After [his] retirement in 1959... he... began intensive work on a Sengoi word list... It is the expectation of the editorial team that the [present] dictionary will help to stabilize written material in the language.... The dictionary will also provide for the

Sengoi a record of their language, including some Sengoi words that are gradually dying out... No dictionary can be complete and without error-especially so the first recording of a language" (Preface).

[**SERI**] Seri (Seri: cmiiq̄e iitom) is an indigenous language spoken by between 716 and 900 Seri people in Punta Chueca and El Desemboque, two villages on the coast of Sonora, Mexico. The language is generally considered an isolate, however, there have been attempts to include it in the theoretical Hokan language family. There is no concrete evidence for connections to other languages at this time. Seri has been concretely recorded by Westerners as early as 1692 but the population has remained fairly isolated. Extensive work on Seri began in 1951 by Edward and Mary Beck Moser with the Summer Institute of Linguistics. The language is viable within its community and is used freely in daily life. Exceptions include primary and secondary school, some parts of local church services, and communications with Spanish speakers outside of the Seri community. Most members of the community, including youth, are fluent in their language. However, the population of speakers is small and cultural knowledge is

dwindling as the traditional hunter-gatherer lifestyle becomes increasingly obsolete. For these reasons, Seri is listed as a vulnerable language by UNESCO (Wiki).

"The Shambala, officially referred to as Washambas, are a tribe of around 70,000 people in East Africa. The name of the Usambara Mountains in which they live is only a variant in pronunciation of the same basic word; the natives themselves refer to their land as Shambalai. Their speech, which possessed no written form, was set down in writing as a church and school language by the Bethel Evangelical Missionaries of German East Africa, who have been working among them since 1891. This dictionary has arisen in response to a need to grasp, as far as possible, the Shambala language in its entirety and fix its vocabulary in written form. Up to now, young people have learned Shambala only orally from their elders, because the Shambala could neither read nor write; only the elders mastered the vocabulary of the language. The lack of an auxiliary language rendered it difficult to pin down the meaning of words. When asked the meaning of a word, a Shambala could only explain it in his native tongue. If there wasn't some way of making it understood through gestures it often took a long time to get at the basic sense of the word... I spent eleven years on the manuscript, up to 1906; then I had no time for linguistic work and the work remained unfinished. In 1914, shortly before the war, when I returned home on a leave, I took the whole manuscript along, and in 1915 Professor Meinhof asked me to prepare the dictionary for print. ...125 pages were lost while I was moving back and forth in 1918 and I had to fill them out again. That, along with the unrest in the Fatherland, held things up even further, and now in 1921 the book, God willing, will be finished" (Preface, tr: BM).

[SHAN] The Shan language... is the native language of Shan people and spoken mostly in Shan State, Burma. It is also spoken in pockets of Kachin State in Burma, in northern Thailand, and decreasingly in Assam. Shan is a member of the Tai-Kadai language family, and is related to Thai. It has five tones, which do not correspond exactly to Thai tones, plus a "sixth tone" used for emphasis. It is called Tai Yai, or Tai Long in the Tai languages. The number of Shan speakers is not known in part because the Shan population is unknown. Estimates of Shan people range from four million to 30 million, though the true number is somewhere around six million, with about half speaking the Shan language. In 2001 Patrick Johnstone and Jason Mandryk estimated 3.2 million Shan speakers in Myanmar; the Mahidol University Institute for Language and Culture gave the number of Shan speakers in Thailand as 95,000 in 2006. Many Shan speak local dialects as well as the language of their trading partners. Due to the civil war in Burma, few Shan today can read or write in Shan script, which was derived from the Burmese alphabet... Chinese Shan is also called (Tai) Mao, referring to the old Shan State of Mong Mao (Wiki).

"This is the first major collection of materials made in recent decades within an area which, in general, very little has been written.... The language here represented is Tai Mau, the speakers of which are also known as Chinese Shans. The Shans commonly make a distinction between speakers of Northern Shan and Southern Shan. The Tai Mau dialect of this collection comes from the Northern Shan group and is spoken on the frontiers of northeastern Burma and Yunnan Province in the People's Republic of China. This collection is the result of research conducted in Chiang Mai, Thailand, during the period from January to August 1976.... Glossary I is keyed to [the] texts, but also includes additional vocabulary elicited in the field. Glossary II has been compiled to allow for a comparison of certain Tai Mau words with their cognates in Standard Thai" (Introduction).

[**SHAWNEE**] The Shawnee language is a Central Algonquian language spoken in parts of central and northeastern Oklahoma by the Shawnee people. It was originally spoken in Ohio, West Virginia, Kentucky, and Pennsylvania. It is closely related to other Algonquian languages, such as Mesquakie-Sauk (Sac and Fox) and Kickapoo. Shawnee is severely threatened, with speakers shifting to English. The approximately 200 remaining speakers are older adults. The decline in usage of Shawnee is largely the result of reform schools for Native American children that forced an education in English, causing some Native Americans to cease teaching their languages to children. Of the 2,000 members of the Absentee Shawnee Tribe around Shawnee town, more than 100 are speakers; of the 1,500 members of the Eastern Shawnee Tribe in Ottawa County, there are only a few elderly speakers; of the 8,000 members of the Loyal Shawnee in the Cherokee region of Oklahoma around Whiteoak there are fewer than 12 speakers. All of these low figures, in addition to the fact that most speakers are older adults, make Shawnee an endangered language. Additionally, development outside of the home is limited; apart from a dictionary and portions of the Bible from 1842 to 1929, it appears that there is little literature or technology support for Shawnee.... Conversational Shawnee booklets and CDs, and a Learn Shawnee Language website are available (Wiki).

[**SHENG**] Sheng is a Swahili-based cant, perhaps a mixed language or creole, originating among the urban underclass of Nairobi, Kenya, and influenced by many of the languages spoken there. While primarily a language of urban youths, it has spread across social classes and geographically to neighbouring Tanzania and Uganda. A word "Sheng" is coined from the two languages that it is mainly derived from: Swahili and English. The "h" was included from the middle of "Swahili because "Seng" would have sounded unusual. Originating in the early 1950s in the Eastlands area of Nairobi (variously described as a "slum", "ghetto" or "suburb"), Sheng is now heard among matatu drivers/touts across the region, and in the popular media. Most of the Sheng words are introduced in various communities and schools and given wide exposure by music artists who include them in their lyrics, hence the rapid growth. It can be assumed to be the first language of many Kenyans in urban areas. Although the grammar, syntax, and much of the vocabulary are drawn from Swahili, Sheng borrows from English and from the languages of various ethnic groups in Kenya, including Luhya, Gĩkũyũ, Luo and Kamba. Words are also borrowed from languages that are neither a local language nor English –

such as the Sheng word morgen "morning" – a Sheng word used in some areas with a similar meaning in German (Wiki).

Ethnologue is currently (2016) under consideration for listing as a language of Kenya.

[**SHINA**] Shina (Urdu: شینا *Šīnā*) is a language from the Dardic sub-group of the Indo-Aryan languages family spoken by the Shina people, a plurality of the people in Gilgit-Baltistan, Pakistan, formerly known as the Northern Areas of Pakistan. The separate nature of the Dardic languages is still clear, however, from their close relationship with other Indo-Aryan languages, especially Punjabi. Dialects are Gilgiti (the prestige dialect), Astori, Chilasi Kohistani, Drasi, Gurezi, Jalkoti, Kolai, and Palasi. Related languages spoken by ethnic Shina are Brokskat (the Shina of Baltistan and Ladakh), Domaa, Kohistani Shina, Palula, Savi, and Ushojo. Shina is the language of 40% people of Gilgit Baltistan. The valleys in which it is spoken include Southern Hunza Astore, Chilas, Darel, Tangir, Gilgit, Ghizer, Gurez, Drass, Juglot Valley, Drotte Palas, Kolai, and Kohistan (Wiki).

[**SHONA**] Shona /'ʃoʊnə/, or chiShona, is the most widely first spoken Bantu language, native to the Shona people of Zimbabwe. The term is also used to identify peoples who speak one of the Shona language dialects: Zezuru, Karanga, Manyika and Korekore, sometimes also Ndaou. Some researchers include Kalanga: others recognise it as a language in its own right. Desmond Dale's basic English–Shona and Shona–English dictionaries [see below] comprise special vocabulary of the Karanga, Korekore, Manyika and Zezuru dialects, but no Ndaou or Kalanga. Shona is a principal language of Zimbabwe, along with Ndebele and the official business language, English. Shona is spoken by a large percentage of the people in Zimbabwe. Other countries that host Shona language speakers include Botswana, Mozambique and of late South Africa due to influx of economical refugees fleeing the economic crisis in Zimbabwe. There are an estimated +/- 3 million Zimbabweans in South Africa of which more than half of them are Shona speakers (Wiki).

Romen and Sons, who printed the second edition as well, in 1913... The third edition was printed in 1927 at Mariannhill, in Natal, and was, again, an enlarged work... It is evident [on the basis of other early vocabularies discussed here] that there was, over these years, a great demand for dictionaries and vocabularies in every dialect-group. Today the demand seems to be no less, while dictionaries of every kind in Shona are out of print. In view of this demand it has been decided to re-issue Fr. Biehler's work as it appeared in 1927. That a very much fuller and up-to-date dictionary of Shona is urgently required is beyond doubt. Such a work is already being planned and much material has already been collected for it [see *Standard Shona Dictionary* below]. But as it will be some years before such a work can appear... it was decided to re-publish the present work unchanged" (Foreword, G[eorge] Fortune).

**1932:** [LILLYbm] *A Vocabulary of the Dialects of Mashonaland in the new Orthography*, by Bertram H[erbert] Barnes. London: The Sheldon Press, 1932. Original blue cloth over boards, lettered and decorated in black. Pp. [6] *i-iv v-ix x, 1 2-213 214* [2] (with 8 pp. inserted between pp. [ii]-[iii], Tables II and III). First edition. Zaubmüller, col. 410. Hendrix 1386. Includes Shona-English, pp. 1-148, and English-Shona, pp. 149-207.

"This little vocabulary is an aid to the unification of Shona Dialects undertaken at the desire of the Language Committee by one of their number. It aims at collating more or less the commoner words from the four or five chief dialects... It is, of course, written throughout in the new orthography without which unification is impossible. It is promised by the publishers that they will keep the type standing for two years from the date of publication in England, and it is proposed to bind up a good number of copies with blank pages interleaved [for comments and corrections by readers]... A number of Nda words are included at the express desire of the Missions working in that area... but ... there is much more difference of vocabulary and usage between Nda and the other dialects than there is between Karanga, Zezuru, and Manyika" (Preface). This copy with an ownership inscription in pencil: "Oril A. Penney / Matambara Mission / Matambara / Southern Rhodesia."

"When the Southern Rhodesia African Literature Bureau came to see that the higher cost of producing Shona books printed in an orthography which has six special symbols would slow down the growth of Shona literature... [it was decided to] replace Dr. Doke's orthography with one that would have no other letters than those in the English alphabet... Secondly, a new method of spelling Shona was devised... and labelled Standard Shona Spelling. Finally, the compilation of a Standard Shona Dictionary was projected."

[**SHOSHONI**] Shoshoni, also written as Shoshoni-Gosiute, and Shoshone (/ʃoʊˈʃoʊni/ Shoshoni: Sosoni' daigwape, newe daigwape or neme taikwappeh) is a Native American language of the Uto-Aztecan family spoken by the Shoshone people. Shoshoni-speaking Native Americans occupy areas of Wyoming, Utah, Nevada, and Idaho. Principal dialects of Shoshoni include Western Shoshoni in Nevada, Gosiute in western Utah, Northern Shoshoni in southern Idaho and northern Utah, and Eastern Shoshoni in Wyoming. The number of people who speak Shoshoni has been steadily dwindling since the late 20th century. In the early 21st century, fluent speakers number only several hundred to a few thousand people. An additional population of about 1,000 know it to some degree. (Wiki). Ethnologue lists Shoshoni as "threatened" as it notes that many of the speakers are 50 and older. UNESCO has classified the Shoshoni language as "severely endangered" in Idaho, Utah, and Wyoming. The language is still being taught to children in a small number of isolated locations. The tribes have a strong interest in revitalization but efforts to preserve the language are scattered, with little coordination. Literacy is increasing. Shoshoni dictionaries have been published and Bible portions translated in 1986 (Wiki).

"It is but just to the public to say that, with the English alphabet, it is next to an impossibility to write the dialect of the Shoshones so that a stranger, unacquainted with its peculiarities, can pronounce it correctly. In this vocabulary the words are spelled as phonetically as the English alphabet will allow, and with it any person may learn to speak the dialect so that an Indian can understand him. If this is accomplished it is all I expect" (Notice).

[T]he value of these new vocabularies ... rests in the fact of their being the largest number hitherto secured by one observer, by which circumstance the confusing elements of individual method and of conflicting orthographies are avoided" (Introduction).

[**SHUGHNI**] Shughni is one of the Pamir languages of the Southeastern Iranian language group. Its distribution is in the Gorno-Badakhshan Autonomous Region in Tajikistan and Badakhshan Province in Afghanistan. Shughni tends towards SOV word order, distinguishes a masculine and a feminine gender in nouns and some adjectives as well as the 3rd person singular of verbs. Shughni distinguishes between an absolutive and an oblique case in its system of pronouns. The Rushani dialect is noted for a typologically unusual 'double-oblique' construction, also called a 'transitive case', in the past tense (Wiki).

[**SIERRA LEONE LANGUAGES: POLYGLOT**] Sierra Leone is a multilingual country, with 25 languages. English is the de facto official language, and Krio is the most widely spoken and is spoken in different countries. Other major languages include

Mende, which is spoken by 29.5% of the population as a mother tongue and as a lingua franca in southern Sierra Leone, and Temne, which is spoken by 37% as a mother tongue and also as a lingua franca in northern Sierra Leone and some part of the Capital and the Western Area. Other languages include Kono, Kissi, Kuranko, Limba, Fula (Pular) and Susu. Although English, as the official language, is spoken in schools, government administration and the media, Krio is spoken as a lingua franca in virtually all parts of Sierra Leone. Krio, an English-based creole language, is the mother tongue of 10.5% of the population but is spoken by 90% of Sierra Leoneans (Wiki).

"After the appearance of the "Sikhule-Texte"...and the comparative study "Die Sichule-Sprache auf der Insel Simalur an der Westküste von Sumatra"... I now add, to complete my investigations of Sikule, a vocabulary of the languages. I've arranged the vocabulary in a comparative fashion: the Sikule words are followed, insofar as possible, by etymological parallels in Nias and Simeulue and its dialects.... The correspondences from Nias and Simeulue...may also make clear the particular character of the Sikule language, namely that of a 'blend language' (Mischsprache)... "The present work is based primarily on the extensive vocabularies of the Eddystone Island language recorded by the late Captain A. M. Hocart. I prepared a tentative edition of the main vocabulary in 1942 but wartime restrictions and my own service duties prevented its publication in a permanent form and it was issued in a foolscap typescript edition limited to twenty copies in 1944. That year I announced a more orthodox edition of my *Dictionary of the Mailu Language*... but a delay of twenty-five years has intervened before publication could be realised" (Preface). "Eddystone Island... lies in the western part of the New Georgian Archipelago in the Gizo District of the British Solomon Islands Protectorate... Very little data on the population of Eddystone are available... In 1946 I recorded a figure of upwards of 650, while in 1960 Scheffler found 'a population well in excess of 800'."

"It is some months ago since we were favoured by the government of India with the copious Vocabulary which forms the subject of the present article... political events rendering the publication of the Vocabulary now of urgency, we have therefor lost no time in ... hurrying it through to the press. We should also state that in the MSS. each Scindee word is also written down in the native character, and having no fount of types of this, we have been compelled to omit what would otherwise have rendered it so much more complete. As it now stands, however, it is a noble foundation for a complete Dictionary of the language... and is another monument to those patient labours of which Englishmen have so honorably aided to build up and to consolidate the influence and power of their country in the East, while they advance the cause of civilization and the interests of humanity" (p. The introduction includes the story of a failed attempt, at that time, to publish an English-Sindhi dictionary by the same compiler.

"Under the circumstances, it was decided to issue meanwhile a reliable Sindhi-English Dictionary of somewhat *moderate* dimensions, but yet fairly full in its way. The need for such a book was being also keenly felt owing to Shirt's Dictionary being out of print. Such a compilation would, it was expected, be comparatively easy after the time and labour collaterally spent upon the English-Sindhi Dictionary and the projected comprehensive Sindhi-English Dictionary, while it would also serve to recompense the publishers for the outlay they had already incurred.... The materials for the present work have been largely drawn from the late Rev. Shirt's compilation, to which has been added a fairly large number of words collected by myself..."(Preface).

"The Hindi-English-Sindhi Dictionary is one of the few trilingual lexicons which have seen the light of the day since Independence. That a trilingual dictionary should have been sponsored by the representatives of what is comparatively one of the smaller minorities of India speaks well of its spirit of enterprise and living interest in the field of letters....The history of Sindhi lexicography has a dim past. No recorded reference, earlier than the first half of the 19<sup>th</sup> century, has so far become available which would indicate that there was any Sindhi dictionary anterior to that period...It is, however, only after the British conquest of Sindh (1843 AD) that dictionaries, in the modern sense, came to be compiled for the Sindhi language" (Introduction).

Part Second: English and Cingalese; contains English primitive words and those of utility only, rendered into Cingalese. An Introduction is prefixed, containing observations on these languages, designed to assist in their acquirement, and an Appendix Is added, containing the Latin and the French Phrases which occur most frequently in English books*, by John Callaway. Colombo: Printed for the Author, at the Wesleyan Mission Press, 1821. Original wrappers with vellum spine, lettered and decorated in black. [i-iii], iv-xxii, [1]-92, [1]-156. First edition. Not in Zauhmüller. "Why the language of the Cingalese has never been presented to the public in the form of a dictionary, the writer is unable to explain." A Cingalese and English Vocabulary by the same author was printed in Colombo in 1818 (see above), with a second edition published in 1820.

**1885-1888:** [LILLY] "Relics of Ancient Religions in Ceylon—the Kohomba Yakas and Rice Customs," in: *The Taprobanian: A Dravidian Journal of Oriental Studies in and around Ceylon, in Natural History, Archaeology, Philology, History, &c....* Bombay: Education Society Press, 1885-1888. Includes pp. 167-175, a "Glossary of Goyi Words" [farmer caste (Goyi) vocabulary of Sinhalese]. The Lilly's copy is from the library of mystical philosopher Charles Muses, with his handwritten notes, although none on this glossary.

**1899, 1901:** [LILLYbm] *A Pocket Dictionary Of The English And Sinhalese Languages*, by the Rev. James Nicholson, Wesleyan Missionary, revised and enlarged by the Rev. David de Silva, and revised again by the Rev. J. Simon de Silva. Colombo: Methodist Book Room, 1901; bound with: *A Sinhalese-English Dictionary abridged from Clough's Dictionary*, by Revs. T[homas] Moscrop & R. A. Mendis. Collupitiya: W. Methodist Book Room, 1899. Contemporary unlettered full brown leather. Pp. [2] i-iii iv-vi, 1 2-353 354; [4] <sup>2</sup>1-276 [2]. Fifth edition of first title; first edition of second title. Not in Zauhmüller (who lists only Clough's dictionary of 1892 in two volumes). Includes English-Sinhalese, pp. 1-353, and Sinhalese-English, pp. <sup>2</sup>1-276.

"This new edition has again been carefully revised...to make it as complete and accurate as possible. The Edition contains twenty additional pages of new words in current use" (Preface to the Fifth Edition). "For a long period a small Sinhalese Dictionary has not been available. Owing to its price Clough's Dictionary has not been in the hands of the village teacher and his scholars, nor of many others who need such help as a Dictionary can give. This edition is abridged from Clough; but alternations have been freely made to secure brevity and greater clearness" (Preface). This latter dictionary has been reprinted as recently as 1994.

**1924:** [LILLYbm] *A Sinhalese-English dictionary*, by the late Rev. Charles Carter. Colombo: Published by The Baptist Missionary Society, printed by The "Ceylon Observer" printing works, 1924. Contemporary red cloth over boards, with green leather label on spine, lettered in gold. Pp. [2] i-ii iii-x, 1-806. First edition. Zauhmüller, col. 350. This copy with release stamp from the British Museum, in a BM binding with "British Museum" and crown in gold on front and rear covers, and "British Museum" stamped on top edge. Includes Sinhalese-English, pp. 1-806.

"The late Rev. Charles Carter, Compiler of this Dictionary, arrived in Ceylon, as a Missionary of the Baptist Missionary Society, on 22<sup>nd</sup> September, 1853. He set himself at once to acquire a knowledge of the language...and was able to preach his first sermon

in Sinhalese at Biyanwila four months after arrival. During his Missionary career he attained such a command of the language as has been rarely or ever equalled by Europeans. His English-Sinhalese Dictionary, printed at the Government Press, is the best of its kind and is in general use.... The author, who commenced [the present work] in 1892, has put into the compilation what would equal ten years' consecutive labour. The manuscript has been subjected to the scrutiny of competent Sinhalese scholars, who contributed valuable suggestions and corrected the work at the press" (Preface, John A. Ewing, Colombo, May, 1924).

Carter was a Baptist Missionary in Ceylon, "author of an English-Sinhalese Dictionary [first edition 1891; enlarged 1936], Sinhalese and English Lesson Books on Ollendorff's System, and translator of the Bible into Sinhalese, etc."

**1941:** [LILLYbm] *An Etymological Glossary of the Sinhalese Language*, by Wilhelm Geiger. Colombo: The Royal Asiatic Society Ceylon Branch, 1941. Original tan wrappers, lettered and decorated in black. 196 pp. First edition. Not in Zaunmüller, although the original German edition of 1898 is listed, as well as a Dictionary of the Sinhalese Language, with Don Yayatilaka, Colombo, 1935 ff. "Since the appearance in 1897 [sic] of Professor Wilhelm Geiger's *Etymologie des Singhalesischen* a large number of Sinhalese lithic records and many important classical texts have been carefully examined and edited by competent scholars. With the new materials thus made available...the author revised the above glossary and prepared the present enlarged edition. This, as well as his Sinhalese Grammar (1938), he considered as a part of his work on the Sinhalese Dictionary..."

**1970:** [LILLYbm] *Singalsko-russkii slovar: okolo 37 000 slov*, by A[leksandr] A[leksandrovich] Belkovich. Moscow: Sovetskaia Entsiklopediia, 1970. Original blue-gray cloth over boards, lettered in white and blue. Pp. 1-5 6-824. First edition. Includes Sinhalese-Russian, pp. [11]-750. Belkovich also published a Russian-Sinhalese dictionary in 1983.

**1982:** [LILLYbm] *Clough's Sinhala English Dictionary*, by B[enjamin] Clough. New Delhi: Asian Educational Services, 1982. Original shiny red cloth over boards, lettered in gold; d.j. yellow, white, and black, lettered in red and black. 824 pp. A reprint of the second, new and enlarged edition originally published in 1892 in Colombo by the Wesleyan Mission Press. The first edition was published in 1830.

[**SIONA**] The Siona language (otherwise known as Sioni, Pioje, Pioche-Sioni, Ganteyabain, Ganteya, Ceona, Zeona, Koka, Kanú) is a Tucanoan language of Colombia and Ecuador. As of 2013, Siona is spoken by about 550 people. Teteté dialect (Eteteguaje) is extinct (Wiki).

[**SIRIONÓ**] Sirionó (also Mbia Chee, Mbya, Siriono) is a Tupian (Tupi-Guarani, Subgroup II) language spoken by about 400 Sirionó people (50 are monolingual) and 120 Yuqui in eastern Bolivia (eastern Beni and northwestern Santa Cruz departments) in the village of Ibiato (Eviato) and along the Río Blanco in farms and ranches (Wiki).

Ethnologue: srq. Alternate Names: Mbia Chee, Mbya.

**1962:** [LILLYbm] *Vocabulario castellano-sirionó*, by Anselmo E[bnr] Schemair {1902- }. Innsbruck: Innsbrucker Gesellschaft zur Pflege der Geisteswissenschaften, 1962. Original yellow wrappers, lettered and decorated in black. Pp. [8] 1-406 407-408. First edition. Series: Innsbrucker Beiträge zur Kulturwissenschaft. Sonderheft 11. Includes Spanish-Sirionó, pp. 55-406. Schemair's *Vocabulario Sirionó-Castellano* appeared in 1958. Together the two volumes represent the first dictionary of Sirionó. Sirionó is spoken in Bolivia and is related to Tupi-Guarani.

"...Before the appearance of Father Schermair's work the language of the primitive Sirionó tribe was practically unknown... as a matter of fact, only short lists or glossaries with few words had been available" (Proem, in English).

[SIRMAURI] Sirmauri, or Himachali, is a pair of Western Pahari languages of northern India, Dharthi (Giriwari) and Giripari. Although considered dialects, intelligibility between them is difficult, and not much better than with neighboring languages. Since Kashmiri, Punjabi, Urdu and Hindi are spoken in a region that has witnessed significant ethnic and identity conflict, all have been exposed to the dialect-versus-language question. Each of these languages possesses a central standard on which its literature is based, and from which there are multiple dialectal variations. At various times, Gujri, Dogri and Himachali have been claimed to be dialects of Punjabi Language. Similarly, some Western Pahari languages (such as Rambani) have been claimed to be dialects of Kashmiri (Wiki).

Ethnologue: srx. Alternate Names: Himachali, Pahari, Sirmouri, Sirmuri.

**1976:** [LILLYbm] *Himachali Studies. I. Vocabulary*, by Hans Hendriksen. Copenhagen: Det Kongelige Danske Videnskabernes Selskab, 1976. Original gray wrappers, lettered and decorated in black. Pp. I-V VI-XXIII XXIV, 1-227 228. First edition. Historisk-filosofiske Meddelelser 48, 1. Includes Himachali-English, pp. 1-227.

"This publication is the outcome of two tours to [Simla] India in 1952-53 and 1964. The term *Himachali* means the group of dialects generally called West Pahari. The dialect here called Kotgarhi, spoken in the Kotgarh and Thanedhar district, was the main object of the investigation, but *Kochi*, spoken east of Kotgarh, is also included to a lesser extent. The vocabulary, which contains a little under 4500 words, is to be followed by texts with translation (tales, proverbs, folksongs) and a grammar" (Synopsis).

Saarbrücken, Germany: VDM Verlag Dr Muller, 2008. vi, 151 p.: maps; 23 cm. Includes bibliographical references (p. 83-86). Includes first lexicon of this language.

"This work provides the first linguistic description of Isaalo (Western Sisaala [SSL]), a language spoken by less than 10,000 people in and around Lambussie, in the Upper West Region of Ghana. It presents a detailed phonological description and includes an orthography proposal for this previously unwritten language. Included is also an overview of Isaalo morphology, a 1200 word lexicon and a transcribed interlinear glossed text. This work establishes Isaalo as a distinct language within the Sisaala language complex and disambiguates it from closely related Sisaala languages spoken in Northern Ghana and Southwestern Burkina Faso."--P. Pp. *i-iv* v-xviii, 1-2 3-242, 1-2, 3-60. First edition. Not in Hendrix. Includes Sisaala-English, pp. [1]-242, English-Sisaala, pp. [1]-47, illustrations and appendices, pp. [48]-50. First dictionary of the language.

"With more than 3,000 Sisaala entries (words, idioms, proverbs) we have covered the most common expressions of the language. It is based upon several years' research work by members of the Institute of Linguistics and many Sisaalas who helped us in the work. . . . We hope that the Sisaalas themselves will take the initiative to revise and extend this present edition. May this book become a daily guide for teachers in the various Sisaala schools. . . and an encouragement and challenge to many Sisaalas to learn to read their own language and to non-Sisallas to learn the Sisaala language" (Preface and Acknowledgements).

[**SOGDIAN**] The Sogdian language (Sogdian swγdy'w) was an Eastern Iranian language spoken in the Central Asian region of Sogdia, located in modern-day Uzbekistan, and Tajikistan (capital: Samarkand; other chief cities: Panjakent, Fergana, Khujand and

Bukhara), as well as some Sogdian immigrant communities in ancient China. Sogdian is one of the most important Middle Iranian languages, along with Bactrian, Khotanese Saka, Middle Persian and Parthian. It possesses a large literary corpus. The Sogdian language is usually assigned to a Northeastern group of the Iranian languages, although this is a Sprachbund rather than a genetic group. No direct evidence of an earlier version of the language ("Old Sogdian") has been found, although mention of the area in the Old Persian inscriptions means that a separate and recognisable Sogdia existed at least since the Achaemenid Empire (559-323 BCE). The modern Eastern Iranian language Yaghnobi is the descendant of a dialect of Sogdian spoken around the 8th century in Ustrashana, a region to the south of Sogdia (Wiki).

Ethnologue does not list Sogdian.

[**SOMALI**] Somali /sə'mɑ:li, sou-/ (Af-Soomaali [æf sɑ:mɑ:li]) is an Afroasiatic language belonging to the Cushitic branch. It is spoken as a mother tongue by Somalis in Greater Somalia and the Somali diaspora. Somali is an official language of Somalia, a national language in Djibouti, and a working language in the Somali Region of Ethiopia. .... Somali is the second most widely spoken Cushitic language after Oromo. As of 2006, there were approximately 16.6 million speakers of Somali, of which around 8.3 million resided in Somalia. The language is spoken by an estimated 95% of the country's inhabitants, and also by a majority of the population in Djibouti. Following the start of the Somali Civil War in the early 1990s, the Somali-speaking diaspora increased in size, with newer Somali speech communities forming in parts of the Middle East, North America and Europe. Constitutionally, Somali and Arabic are the two official languages of Somalia (Wiki).

**1964:** [LILLYbm] *Somali-English dictionary*, by R[oy] C[live] Abraham. London: University of London Press, 1964. Original dark blue cloth over boards, lettered in green. Pp. *i-vi* vii-xviii, 1-332. First edition. Hendrix 1407 (listing first edition as 1962). Although the copyright is given as 1962, The Somali Republic, there is no evidence that an edition was printed in 1962; indeed the Preface, p. 8, makes clear how unlikely it is that the 1962 date represents an edition. Includes Somali-English, pp. x-332.

"The present burdensome cost of printing—at least five pounds per page for setting up by monotype—has necessitated my typing the whole work for production by photo-offset, a gigantic task on top of the enormous task of compiling the dictionary. If in a few places the print is defective, I must crave the indulgence of the user for an author seventy years of age and suffering from heart trouble" (Preface).

Hendrix 1423. With the ownership signature of John B. Avery. This is the first true French Somali dictionary. The only previous separately published French language vocabulary appeared in 1897 by L. Henry: *Essai de vocabularie pratique français-issa (somalies) avec prononciation figurée*.

"Somali is the official national language of the Democratic Republic of Somalia. Up to 1972, it was only a spoken language, no alphabet having been adopted for writing it at that date. The Latin alphabet was chosen in preference to the Arab alphabet by the Somalian authorities. The Latin alphabet has thus been retained in editing this lexicon" (Preface, tr: BM).

"Thesis submitted for the degree of Doctor of Philosophy of the University of London 1981."

"The aim of this thesis is to examine the lexical modernisation of the Somali language.... Although some vocabulary expansion took place on a limited and informal scale with the introduction in 1943 of radio broadcasts in the Somali language, it was not until 1972 that an official orthography was established—prior to which date no generally accepted written form had existed—and a co-ordinated government programme of vocabulary expansion initiated. It is this new Somali vocabulary which forms the basis of the present study" (Abstract).

"In the recent times, many people from Somalia have settled in Europe and the America, due to which this language has gained extra-ordinary prominence in these advanced countries... However, this is a fact that there are very few dictionaries available in the market today... One of the dictionaries was produced in early seventies, but that was not complete in many respects. We feel pleasure to present this ... dictionary which has been compiled by a group of Somalian teachers in India."

[**SONGHAI LANGUAGES**] The Songhay or Songhai languages (pronounced [soŋaj], or [soŋoj]) are a group of closely related languages/dialects centered on the middle stretches of the Niger River in the west African countries of Mali, Niger, Benin, Burkina Faso, and Nigeria. In particular, they are spoken in the cities of Timbuktu and Gao. They have been widely used as a lingua franca in that region ever since the era of the Songhai Empire. In Mali, the government has officially adopted the dialect of Gao (east of Timbuktu) as the dialect to be used as a medium of primary education. As regards interintelligibility of Songhay languages, the dialect of Koyraboro Senni spoken in Gao is unintelligible to speakers of the Zarma dialect of Niger, according to the Ethnologue. For linguists, a major point of interest in the Songhay languages has been the difficulty of determining their genetic affiliation; they are commonly taken to be Nilo-Saharan, as defined by Greenberg in 1963, but this classification remains controversial. Linguist Gerrit Dimmendaal (2008) believes that for now it is best considered an independent language family. The name Songhay is historically neither an ethnic nor a linguistic designation, but a name for the ruling caste of the Songhai Empire. Under the influence of French language usage, speakers in Mali have increasingly been adopting it as an ethnic self-designation; however, other Songhay-speaking groups identify themselves with other ethnic terms, such as Zarma (Djerma) or Isawaghen. Songhay is currently written in the Latin script (Wiki).

Ethnologue includes nine languages in the Songhai family.

"This lexicon was profoundly inspired by the work of M. Dupuis Yacouba [1917, not in Zaunmüller] [which, however, was marked by the presence of] a large number of words of Arabic origin, since M. Dupuis wrote it in the region of Timbuktu, influenced by two centuries of Moroccan colonization, which had injected a large number of Arabic words into the local language, and also by the presence of numerous words from Bambara and Soninke... due to Timbuktu's position as a market between South and North... [The present] lexicon, although incomplete and imperfect, constitutes the most thorough document of what we know about this language today, and it will be a very precious aid to those who are concerned with the study of Songhai" (Introduction, tr: BM).

[**SONSOROLESE**] The Sonsorolese language is a Micronesian language... mostly spoken in a small area called Palau, which is located in the Pacific Ocean near Micronesia. Sonsorolese is also spoken in Sonsorol, Pulo Anna, and the Merir Islands (ethnologue.com). The language is one of the two indigenous languages spoken in the area and is actually the most spoken in the area, especially in Palau (sonsol.com). There are about 360 speakers spread out within 60 islands (Wiki).

**1969:** [LILLYbm] *Grammar and Vocabulary of the Language of Sonsorol-Tobi*, by A[rthur] Capell. Sydney: University of Sydney, 1969. Original light blue linen spine and powder blue paper wrappers, lettered in black. Pp. [6] 1-224. Second edition. Oceania Linguistic Monographs, No. 12. Includes Sonsorol-English, pp. 107-182, and an English-Sonsorol index, pp. 183-224.

"This monograph was originally prepared in 1948 as the outcome of the author's participation in the Coordinated Investigation of Micronesian Anthropology (CIMA). The report in its original form was duplicated in 50 copies and distributed to the libraries and institutions all over the world that received the series of CIMA reports... The present Sonsorol-Tobi Grammar and Vocabulary were issued as CIMA Report No. 30. The Report has been out of print since its original issue in 1951, and it seemed to the author that its preservation in some more permanent form was desirable... No alterations have been undertaken, because informant study is not possible from Sydney and the author is not able to revisit Micronesia" (Foreword). "Sonsorol' is one of four dialects spoken on the four small islands commonly grouped as the Sonsorol Group, situated to the south-

west of the Palau Islands, in the south-western corner of Micronesia... The four islands are closely related, and bear a fairly close resemblance in language also to Ulithi, and rather less to Truk and the Central Carolines. The language of all these groups forms together one subgroup of the Micronesian languages. The four islands are...Sonsorol...Pul...Merir...Tobi... The populations are small, and apparently are still on the wane...The only work on these islands hitherto published is *Ergebnisse der Südsee Expedition, 1908-1910*, ed. by G. Thilenius and Anneliese Eilers ...Considerable bodies of vocabulary ...are given in these volumes...but there is no formal linguistic study... [In the present study] information was collected largely through the medium of Japanese, which the Sonsorol people at Koror speak fluently. Much use also was made of their knowledge of the Palau language [utilizing Bishop Walleser's *Palau Wörterbuch* of 1913]... Sonsorol has been a Roman Catholic Mission area for a considerable number of years, and the only published work in the language is a Catechism" (Introduction).

[**SORA**] Sora, or Savara (also Saora, Saonras, Shabari, Sabar, Saura, Sawaria, Swara, Sabara), is a Munda language of India, spoken by some 288,000 native speakers (1997) in South Odisha in eastern India. Sora is written in the Latin and Telugu scripts, as well as the Sorang Sompeng script devised for the language in 1936. Many Sora people have the family name or surname Savara. A supposed Dravidian language with the same name is evidently spurious. Juray is considered by some to be a dialect of Sora (Wiki).

"This is the first attempt ever made to express in Sora the meanings of the words in the English dictionary. Neither English nor Sora is my mother tongue...but all that I know of Sora has been learnt directly from the persons speaking it...The dialect I have studied is that which is current among the rudest tribes living in the inaccessible hills in the western part of the Parlakimedi Agency...[quote from letter about Ramamurtri]: 'He has for years been spending his own small means and all his spare time toward assisting these people; and he had almost ruined his health over it. His knowledge of the language is probably unique and should not be lost...'. This is rather a vocabulary than a dictionary: about eleven thousand words and phrases have been selected for my purpose from an ordinary English dictionary."

**1938:** [LILLYbm] *Sora-English Dictionary*, by G[idugu] V[enkata] Ramamutri. Madras: Printed by the Superintendent, Government Press, 1938. Original blue cloth over boards, lettered in gold. 318 pp. First edition. Not in Zaunmüller.

"The Government of Madras sanctioned in 1927 the publication of the English-Sora and the Sora-English Dictionaries and approved of my proposal to use the phonetic symbols to represent the sounds of the Sora language...It took me nearly two years to prepare the English-Sora Dictionary, which was printed and published in 1933. ...I have carefully selected the words that deserve a place in the dictionary...but it is certainly not a complete record of the words in the Sora language... 'One missionary reports that he waited so long to hear the word for "thanks" that he considered it did not exist but it came

out at last, under stress of circumstances.'... Sora is an uncultivated language, and has no recognized standard. It varies considerably not only between villages but also between individuals." This is the first Sora-English dictionary.

[**SQUAMISH**] Squamish /'skwɔ:mɪʃ/[3] (Squamish Sk̓w̓x̓w̓ú7mesh sníchim [sqʷχʷoʔməʃ snetʃim], sníchim meaning "language") is a Coast Salish language spoken by the Squamish people of southwestern British Columbia, Canada, centred on their reserve communities in Squamish, North Vancouver, and West Vancouver. An archaic historical rendering of the native "Sk̓w̓x̓w̓ú7mesh" is "Sko-ko-mish" but this should not be confused with the name of the Skokomish people of Washington state. Squamish is most closely related to the Sechelt, Halkomelem, and Nooksack languages. Because the /ʔ/ (glottal stop) character glyph is not found on typewriters and did not exist in most fonts until the widespread adoption of Unicode, the Squamish orthography still conventionally represents the glottal stop with the number symbol "7"; of course, the same character glyph is also used as a digit to represent the number seven (Wiki).

[ST. LUCIAN CREOLE] It is a sub-variety of Antillean Creole, which is spoken in other islands of the Lesser Antilles and is very closely related to the varieties spoken in Martinique, Dominica, Guadeloupe, Grenada and Trinidad and Tobago. The intelligibility rate with speakers of other varieties of Antillean Creole is almost 100%. Its syntactic, grammatical and lexical features are virtually identical to that of Martinican Creole, though, like its Dominican counterpart, it includes more English loanwords than the Martinican variety. Like the other Caribbean Creoles, Saint Lucian French Creole combines syntax of African and Carib origin with a primarily French-derived vocabulary. In addition, many expressions reflect the presence of an English Creole and Spanish influences are also present in the language. The language is not considered to be mutually intelligible with standard French, but is intelligible with the other French creoles of the Lesser Antilles, and is related to Haitian Creole which has a number of distinctive features, but nonetheless are both mutually intelligible. It is still widely spoken in Saint

Lucia, though the actual number of speakers appear to have declined in the past decades. In the mid 19th century it was exported to Panama, where it is now moribund (Wiki).

"The first edition of the French-Soso Dictionary goes back to the Rev. Father Raimbault, who founded the Catholic Mission at Conakry. Since that edition is completely out of print, we wanted to offer to the colonials of French Guinea a complete manual of the native language. Toward this end, the late lamented Father Sage had collected precious material to publish a work more in tune with the phonetic rules and colloquialisms discovered through a more in-depth knowledge of the Soso race. As we

know, death brought to a close the linguistic work of this good and valiant missionary. While awaiting the successful completion of Father Sage's work, we are republishing Father Raimbault's lexicon. Its practical side, its clarity and precision will make this second edition of value" (Foreword to the Second Edition, tr: BM).

[**SWAHILI**] Swahili, also known as Kiswahili, is a Bantu language and the first language of the Swahili people. It is a lingua franca of the African Great Lakes region and other parts of eastern and southeastern Africa, including Tanzania, Kenya, Uganda, Rwanda, Burundi, Mozambique and the Democratic Republic of the Congo. The closely related Comorian language, spoken in the Comoros Islands, is sometimes considered a dialect. Although only around 2 million (2003) to 15 million people speak Swahili as their first language, it is used as a lingua franca in much of Southeast Africa. Estimates of the total number of Swahili speakers vary widely, from 50 million to over 100 million. Swahili serves as a national language of three nations: Tanzania, Kenya, and the Democratic Republic of the Congo. Shikomor, the official language in Comoros and also spoken in Mayotte (Shimaore), is related to Swahili. Swahili is also one of the working languages of the African Union and officially recognised as a lingua franca of the East African Community (Wiki).

"While a few sheets [of the dictionary] remained in the press, the venerable compiler fell into his last sleep, leaving the great work of his holy and useful life incompletd... The Committee [of the Church Missionary Society] assumed as a solemn duty the task of completing the work" (Introduction, Robert Cust). "Unfortunately [my dictionary manuscript of English, Kiswahili, and Kinika]... was destroyed by white ants... When Mr. Rebman and I were at work in Africa, there was no such demand for Kiswahili books as would justify a large expenditure in printing works of the magnitude of this Dictionary. Since then, however, a great change has taken place. The Church Missionary Society has greatly enlarged the area of its work.... The scientific and commercial enterprise of Europe has also found a large opening for activity in the land. So, now, the linguistic work that was prepared with so much labour and care in other days, can no longer be withheld from the public" (Preface).

"[This dictionary is] Krapf's magnum opus.... Krapf's name will stand in East African annals, not only as a great missionary and a great explorer, but for his great contribution to our knowledge of African languages" (C.M. "I was asked by the Governing Body of the East African Mission of the C.M.S. to revise the spelling in Dr. Krapf's 'Swahili-English Dictionary' in the Mombasi-Swahili dialect. ... In doing this work I have been astonished at the number of words which one never hears used, and it is a marvel how Dr. Krapf got hold of so many of these. I should think that nearly half of the words in this dictionary one hardly ever hears, certainly not outside the coast towns. I thought at one time that it would be well to have the words more generally used printed in another type, but felt that this would add too much to the cost of production" (Preface, H.K. Binns).

**1890:** [LILLYbm] *Praktische Grammatik der Suaheli-Sprache, auch für den Selbstunterricht. Mit Uebungstücken, einem Lesebuche und einem Deutsch-Kiswaheli-Wörterbuch*, by A[ugust] Seidel. First edition. *Die Kunst der Polyglottie*, 32. Not in Zaunmüller (who lists the same author's dictionary of Swahili of 1902). Hendrix 1561. Includes German-Swahili, pp. [133]-182.

"Within the past few years European, and particular German and English, interest in East Africa has increased to the point that calls increasingly for practical means of learning Kiswahili, the *lingua franca* of that area. The valuable publications of Steere, Krapf and others provide rare material, gathered with great circumspection, but for several reasons they are unsuited to the practical purpose of learning a language. The present book is intended to fill that gap. It focuses on the Zanzibar dialect as most likely to achieve linguistic dominance... The author hopes in particular that the German-Kiswahili dictionary, which contains over 4000 words, will fulfill an urgent need" (Foreword, tr: BM). "Kiswahili is spoken on the east coast of Africa... The total number of Waswahili may approach 500,000... Their basic characteristics are evident in the following description [paraphrasing R.B. Burton's work on Zanzibar, 1872]:... From the Arabs [the Waswahili] have inherited their malicious way of thinking and the art of hiding their thoughts. They welcome you politely and in their hearts they have already decided to kill you... They are clever but short-sighted in business... To their African origins they owe their relatively high tolerance for other religions; African as well is their lively distrust and the cleverness of the slave... they hardly even know the words for truth and honest... they are naturally optimistic... The primary occupation of the Kiswahili is farming, and to a lesser extent raising cattle, and handicrafts" (Introduction, tr: BM).

*comparative grammar of Greek and Latin for schools and colleges* (London: 1890), *Precis de grammaire palie* (1904), and lexicographical studies of Breton and Colmar dialects. Charles Sacleux was a former Apostolic Missionary to Zanzibar. First French dictionary of Swahili.

"...the Dictionnaire Français-Swahili was based on the Zanzibar dialect rather than that of Mombassa, which, although generally spoken more correctly than the Zanzibar dialect, is not in reality the purest. This work is without precedence of its kind. [There follows a detailed description of the making of the dictionary, listing manuscript sources]. The dictionary concludes with an Appendix of native and scientific names of 1520 plants, of which 780 are found on the island of Zanzibar" (Preface, tr: BM).

"European students of Swahili will find in Père Sacleux's 'Dictionnaire Français-Swahili', 1891... a complete and masterly representation of the language by one who has had the opportunity of devoting many years to its study" (Preface to Madan's *English-Swahili Dictionary*, 1894).

Second edition, revised and enlarged, **1959 [c. 1949]**: *Dictionnaire français-swahili, deuxième édition, revue et augmentée*, by Ch[arles] Sacleux. Paris: Institut d'ethnologie, 1959 (c. 1949). Includes English-Swahili, pp. [1]-635.

"To Krapf, Madan and Steere, whose work for the Swahili language should never be forgotten" (Dedication). "This dictionary is founded on Madan's *Swahili Dictionaries*, and like them, is intended to be an aid to the African in his study of English as well as to the European in this study of Swahili... Many definitions and examples contained in this work are identical with those in Madan's dictionaries, but others have been revised, and both the English vocabulary and the Swahili equivalents and definitions have been considerably augmented. The arrangement adopted differs from that of Madan's dictionary... The need for a revision of Madan's works, or for new dictionaries, was first seriously suggested at an Education Conference held at Dar-es-Salaam, Tanganyika Territory, in 1925... [but] the real work was not begun until the middle of 1933" (Preface). "*The compiler died in February 1937 soon after the complete material for this dictionary had been handed to the Publisher*" (note to Preface).

**1952:** [LILLYbm] *A New English-Swahili Phrase Book*, by B. J. Ratcliffe & Howard Elphinstone. Nairobi: East African Standard, [1952]. Original pale green wrappers, lettered and decorated in black. Pp. 1-72. Front wrapper sole title page. Later printing, with date of 1952 in adverts. on verso of front wrapper. Preface dated 1932. Includes English-Swahili vocabulary, pp. 43-72.

"The authors hope... that [this little booklet] may be found helpful by those who intend to make a more thorough study of the official language of the Colony by giving them the correct expression and so encourage the effort to avoid the jargon with which so many are content to 'scrounge along.' It is not intended to be a substitute for but a first step in the attempt to master the language now ranked as the seventh in the most universally spoken languages of the world."

**1944:** [LILLY] *A Ki-Swahili instruction book for the East Africa Command / East African Army Education Corps*. Entebbe, Uganda: Government Printer, 1944. 2nd ed. ii, 141 p.; 19 cm. Original gray wrappers, lettered and decorated in black. Includes Swahili-English, pp. 116-128, and English-Swahili, pp. 129-141. With a few grammar notes in manuscript at the end. With the stamp on the title page of the "Coast Battery Defense King's African Rifles" and the ownership initials: "V.A.F."

**1955:** [LILLYbm] *Swahili pocket dictionary*, by Margaret [Arminel] Bryan. Nairobi; London: Highway Press; Longmans, Green, 1955. Original tan wrappers, lettered and decorated in red. "This Pocket Dictionary is intended to provide a handy collection of useful everyday words, arranged according to subject... The use of a full dictionary is recommended for more detailed study" (Bibliography).

**1958:** [LILLYbm] *A Concise English-Swahili Dictionary. Kamusi ya Kiingereza-Kiswahili*, by R.A. Snoxall. London: Oxford University Press, 1958. Original light green cloth over boards, lettered in black. 326 pp. First edition. Not in Zaunmüller. Hendrix 1563. This edition was also published in Nairobi by Oxford University Press in the same year.

**1961:** [LILLYbm] [In Cyrillic script] *Suakhili-russkii slovar*, ed. by D[mitrii] A[alekseevich] Oldgerogge. Moscow: Gos. izd-vo inostrannykh i natsionalnykh slovarei, 1961. Original red cloth over boards, stamped in blind and lettered in black. 560 pp. + fold-out and errata slip. First edition. Published under the auspices of the Russian

Academy of Sciences. Hendrix 1545: "Designed for translators and students interested in folklore, literature, ethnography, and social science." This copy has a bookplate of the Library of Congress and an ink stamp indicating it was a duplicate. This appears to be **the** first Russian-Swahili dictionary.

"This Swahili-Russian Dictionary contains nearly 18,000 words and is intended for translators and students who are studying African languages. It can serve as a text-book for the reading of contemporary social-political and artistic literature, the press, folklore, and texts having ethnographic contents" (translated slip loosely inserted in book, presumably from a librarian).

**1965a:** [LILLYbm] *The E.U.P Concise Swahili and English Dictionary, together with students' notes and a short grammar*, by D.V. Perrott. London: The English Universities Press, Ltd., 1965. Original blue cloth over boards, decorated in blind, with a black stamped label on the spine, lettered in gold; d.j. yellow and blue, lettered in yellow and black. Pp. [8] 1 2-184. First edition. Hendrix 1522. Includes Swahili-English, pp. 23-78, and English-Swahili, pp. 84-184.

"Although it is a Concise Dictionary, its Swahili section contains all the words the compiler heard during thirty years' residence in East Africa, together with a selection of those taken for her own use from the dictionaries of Krapf, Sacleux, and Madan and the writings of Swahili authors, and a few present-day words not yet in any dictionary" (Preface).

**1965b:** [LILLYbm] *Kratkii suakhili-russkii i russko-suakhili slovar*, by A[leksandr] I[vanovich] Kutuzov & Ali Juma Zidikher. Moscow: Sovetskaia Entsiklopediia, 1965. Added title page: *Kamusi fupi ya kiswahili-kirusi na kirusi-kiswahili*. Original black cloth over boards, lettered and decorated in red, silver and black. Pp. 1-6 7-442 443-444. First edition. Hendrix 1522. Includes Swahili-Russian, pp. [13]-194, and Russian-Swahili, pp. [211]-435.

**1967:** [LILLYbm] *Swahili-English Dictionary*, by Charles W[illiam] Rechenbach. [Washington, D.C.]: The Catholic University of America Press, 1967. Original light green cloth over boards, lettered in black. Pp. i-iv v-xi xii, 1-641 642-644. First edition. Hendrix 1556 (dated 1968).

"The compilers of this Swahili-English dictionary, the first new lexical work for English speakers in many years, hope that they are offering to students and translators a more reliable and certainly a more up-to-date working tool than any previously available...In the long view, the future of Swahili is difficult to predict; but, for the present, its position appears to be more stable than that of any other African language...Swahili can no longer be considered in the category of the 'rarer' languages...Like all subsequent publications, [this volume] builds gratefully upon the *Standard Swahili-English* and *English-Swahili Dictionary* in two volumes...published by the Oxford University Press in 1939. The present dictionary has critically reappraised the entire word-stock of the language, modernizing and augmenting from many sources. It brings the vocabulary up to date, including the fantastic developments since World War II" (Introduction).

**1970:** [LILLY] *A Swahili nautical dictionary*, by A. H. J. Prins. Dar es Salaam: Chuo cha Uchunguzi wa Lugha ya Kiswahili, 1970. Original gray-green wrappers, lettered in black. First edition. Hendrix 2078. Second copy: IUW.

**1980:** [LILLYbm] *Afrikan language dictionary: Swahili-English and English-Swahili*, by D. W. Kabithe. Toledo, Ohio: Swahili Understanding International, 1980. Original brown cloth over boards, lettered in gold. Pp. I-VI, 1-411 412-418. First edition. Includes Swahili-English, pp. 1-148, and English-Swahili, pp. 150-411.

"It took six years to compose this dictionary.... The most unique aspect of this dictionary is that words that originate from the same root are grouped together, in spite of their alphabetical order. This helps to cut down on the time and labor involved in looking up the words. In previously-published dictionaries, it is common to look up a given words like *upendo* under *u*, only to be directed to the root word *penda* under *p*. Sometimes it is possible to have to search for the meaning of one word over several pages. In this dictionary the problem has been overcome" (Introduction).

[**SWAHILI, CONGO**] Both Congo Swahili and Kingwana are redirected to the general article on Swahili in Wikipedia. Neither is mentioned specifically.

Ethnologue: swc. Alternate Names: Zaïre Swahili. Kingwana is listed as a dialect of Congo Swahili.

**1928:** [LILLYbm] *Manuel de kingwana: le dialecte occidental de swahili*, by John Whitehead & L.F. Whitehead. Wayika, Congo Belge: La Mission de et a Wayika, 1928. Original red cloth over boards lettered in gold. Pp. *i-iii* iv-x, 1 2-492. First edition. Not in Zauhmüller. Not in Hendrix. Reinecke 104.221 (not seen by compilers). Includes Kingwana-French-English vocabulary, pp. 84-210, a French-Kingwana vocabulary, pp. 211-289, an English-Kingwana vocabulary, pp. 290-381, with additions and corrections to the Kingwana-French-English vocabulary, pp. 429-468, to the French-Kingwana vocabulary, pp. 468-486, and to the English-Kingwana vocabulary, pp. 486-492. With list of previous works consulted on p. [iii]. Preliminary matter in both French and English throughout. Whitehead was also the author of the dictionary of Bobangi published in 1899. With the ownership inscription of G. R. M. Stephens.

"To meet the need at Stanleyville for a small Handbook of the Swahili in local use, the Rev. W. Millman issued in 1917 a *Petit vocabulaire de français-english-swahili* [not in Zaunmüller]. On their return from England in 1919, the authors of the present book undertook to revise and enlarge Mr. Millman's work... The actual task... was begun in 1922... The present work is the first and unique effort made to grapple with the whole question of the universal *Lingua franca* Swahili under its *lingua franca* name Kingwana... A mere glance at the contents of this book will be sufficient to convince anyone of the high possibilities for the most ignorant types of the Congo natives to attain a high degree of culture, for every line and every page has been composed and printed by native boys, trained during the past nine years at Wayika. The issue of the present book is entirely unauthorized, it is issued on the sole responsibility of the authors... They regret the great delay in the production of the book... due not alone to standard missionary duties, but as well to] mental and spiritual struggles due to misconceptions, insinuations, the withdrawal of practical sympathy, the withholding of supplies of paper, etc. and the official refusal to sanction the production of this book" (Preface).

[**SWAZI**] The Swazi or Swati language (Swazi: siSwati [siswat'i]) is a Bantu language of the Nguni group spoken in Swaziland and South Africa by the Swazi people. The number of speakers is estimated to be in the region of 3 million. Swazi is an official language of Swaziland (along with English), and is also one of the eleven official languages of South Africa. Although the preferred term is "Swati" among native speakers, in English it is generally referred to as Swazi (Wiki).

Original orange and black cloth over boards, lettered and decorated in orange, black and white. Pp. i-vi vii-xxix xxx-xxxii, 1 2-189 190-192. First edition. With the ownership signature of Keith Fenwich. Includes siSwati-English, pp. [1]-111, and English-siSwati, pp. [115]-188.

"The siSwati language (sometimes called Swazi, from the Zulu form of the name) is a Bantu language of the Nguni group, closely related to Zulu. It is the national language of Swaziland (or kaNgwane) and is widely spoken also in the Eastern Transvaal province of the Republic of South Africa. Since 1968 when Swaziland became an Independent sovereign State, siSwati has steadily been replacing Zulu in education, administration and public life and its use as a written medium has grown rapidly. This dictionary... reflects 'standard siSwati,' based on the so-called 'royal dialect' spoken mainly in and around Mbabane, Lobamba and Manzini" (Introduction).

[**TAABWA**] Taabwa (Ichitaabwa), or Rungu (Malungu), is a Bantu language of Congo and Zambia spoken by half a million or so people (Wiki).

Includes Taabwa-French, pp. [15]-75, and French-Taabwa, pp. [77]-170. First dictionary of Taabwa.

"The first thought of this Dictionary was due to Reverend Father Gustave Debeerst, who founded and served as the first leader of the Mission St.-Jacques at Lusaka (Marungu). Called as his successor (1898), I was charged by my apostolic Vicar Monsignor Roelens with completing this work and delivering it to the printers. If this modest work has any merit, it should be attributed to this scholar and zealous missionary, taken too soon from his beloved mission" (Introduction, tr: BM).

[**TACHAWIT**] Shawiya Berber, also spelled Chaouiia (native form: Tacawit [θafawiθ]), is an Afroasiatic language of the Berber branch. It is a variety of the Zenati languages spoken in Algeria by the Shawiya people. The language's primary speech area is the Awras Mountains in eastern Algeria and the surrounding areas, including Batna, Khenchela, Sétif, Oum El Bouaghi, Souk Ahras, Tébessa, and the northern part of Biskra. The Shawiya people call their language Tacawit (Thashawith), which is also known as Numidian Berber (IPA: [θfawiθ] or [hfawiθ]). Estimates of number of speakers range from 1.4 to 3 million speakers. The French spelling of Chaouiia is commonly seen, due to the influence of French conventions on Algeria. Other spellings are "Chaoui", "Shawia", "Tachawit", "Thachawith", "Tachaouith", and "Thchèwith". Shawiya Berber was, until recently, an unwritten language and rarely taught at school. Recently the Shawiya language, together with Kabylean Berber, has begun to achieve some cultural and media prominence thanks to the Berber cultural and political movements in Algeria, and to the introduction of Berber language education in some public schools (Wiki).

[**TACHELHIT**] Shilha /'ʃilħə/ is a Berber language native to Shilha people. It is spoken by around 4 million people in western Morocco. The endonym is Tašlḥiyt /taʃlħijt/, and in recent English publications the language is often rendered Tashelhiyt or Tashelhit. In

Moroccan Arabic the language is called Šəlḥa, from which the alternative English name Shilha is derived. In French sources the language is called tachelhit, chelha or chleuh. Shilha is spoken in an area covering c. 100,000 square kilometres, comprising the western part of the High Atlas mountains and the regions to the south up to the Draa River, including the Anti-Atlas and the alluvial basin of the Sous River. The largest urban centres in the area are the coastal city of Agadir (population over 400,000) and the towns of Guelmim, Taroudannt, Oulad Teima, Tiznit and Ouarzazate. Shilha possesses a distinct and substantial literary tradition that can be traced back several centuries before the colonial era. Many texts, written in Arabic script and dating from the late 16th century to the present, are preserved in manuscripts. A modern printed literature in Shilha has developed since the 1970s (Wiki).

[**TAGALOG**] Tagalog (/tə'ɡɑ:lɔɡ/; [6] Tagalog pronunciation: [tə'ɡɑ:lɔɡ]) is an Austronesian language spoken as a first language by a quarter of the population of the Philippines and as a second language by the majority. Its standardized form, officially named Filipino, is officially the national language, along with English. It is related to other Philippine languages, such as the Bikol languages, Ilocano, the Visayan languages, Kapampangan and Pangasinan, and more distantly to other Austronesian languages, such as the Formosan languages, Indonesian and Malay, Hawaiian, Malagasy and Māori....

The first substantial dictionary of Tagalog language was written by the Czech Jesuit missionary Pablo Clain in the beginning of the 18th century. Clain spoke Tagalog and used it actively in several of his books. He wrote the first dictionary, which he later passed over to Francisco Jansens and José Hernandez. Further compilation of his substantial work was prepared by P. Juan de Noceda and P. Pedro de Sanlucar and

published as *Vocabulario de la Lengua Tagala* in Manila in 1754 and then repeatedly reedited, with the last edition being in 2013 in Manila (Wiki).

**1803:** [LILLY] *Ueber die tagalische sprache*, by Franz Carl Alter [1749-1804]. Vienna: Gedruckt bei J.T. Edl. v. Trattner, 1803. x, [11]-80 p. 18 cm. Contemporary (original?) gray-blue wrappers, unprinted. Not in Zaunmüller. Includes earliest vocabulary of Tagalog in German. The earliest Tagalog-English dictionary appears to be that of Charles Nigg, published in Manila in 1904.

**1860:** [LILLY] *Vocabulario de la lengua Tagala, compuesto por varios religiosos doctos y graves... por varios religiosos de la Orden de Agustinos calzados*, by Juan de Noceda & Pedro de Saniucar. Manila: Ramirez y Giraudier, 1860. Folio, pp. [18], 642; text in double columns, contemporary limp vellum; hinges split, pastedowns torn, pencil marks throughout preliminaries, occasional light worming through the text, owner's signature and ex-Libreria de Colon stamp on title page. An Ayer Linguistics duplicate, with their label on rear pastedown, and release stamp on flyleaf. The first incomplete vocabulary of Tagalog was published in 1613. It was later enlarged by Noceda and Sanlucar, with their first revised edition appearing in 1754 and undergoing repeated revisions up to 2013. This is the third edition under their editorship. The Biblioteca Filipina describes this dictionary as "difficult to find, because the book is valued like gold by those who have it." Biblioteca Filipina 1825, Palau 192021

**1883:** [LILLY] *Vocabulario Tagalo-Castellano*, by D. E. Fernandez. Manila: Esteban Balbas, 1883. First edition, 16mo, pp. 118, [2]; paper wrappers; spine chipped, one inch closed tear at the top of upper joint, a few pages creased at the bottom corner, small stain to fore-edge, in a custom stiff library folder. An Ayer Linguistics duplicate with release stamp on verso of the title page. Subsequent editions appeared in 1890, 1893 and 1894. Tagalog-Spanish, pp. [3]-64, Tagalog-Spanish verbs, pp. 76-84. Includes Tagalog-Spanish phrases, pp. 85-118. No preliminary material.

**1903:** [LILLYbm] *A Dictionary of the [Native] Plant Names of the Philippine Islands*, by Elmer D[rew] Merrill. Manila: Bureau of public printing, 1903. Contemporary brown half-leather and green cloth over boards, red leather label on spine, lettered in gold, raised bands. Pp. 3-193 (lacking title page and interleaved throughout with blank leaves). Series: Philippine Islands. Bureau of government laboratories. [Publications] no. 8, 1903.

"The present paper enumerates about 5,000 plants names used by the natives of the Philippines, and has been compiled chiefly from the publications of the various Spanish botanists who have worked on the flora of the Archipelago.... By far the greater number of names in the present enumeration are those of the Tagalog language, while of many of the dialects spoken in the Archipelago not a single plant name has ever been recorded... Most of the names recorded here are from perhaps 12 or 15 of the 70 or 80 dialects spoken by the various peoples of the Archipelago... Previously but two attempts have been made to compile any extensive lists of the plant names used by the natives of the Archipelago. The first was Vigil's 'Diccionario,' a pamphlet of 50 pages published in the year 1879, which enumerates about 2,400 names... The second list is that given by Vidal in Appendix II to his 'Sinopsis,' where he enumerates about 1,800 names of tree species, giving the generic identifications only" (Introduction). This copy with the ownership stamp of O.W. Pflueger, with his extensive annotations, both manuscript and typed.

Literally scores of additional plant names (both scientific and native terms) have been added. Otto Wilhelm Pflueger was the author of *Elementary forest measurements*, Mont Alto, Pa., 1940.

No. 9: *Vocabulary of identical Tagalog and Ilocano words with identical meanings translated into English*, by Catalino D. Garduque. Manila: Bureau of Printing, 1955. Original green wrappers, lettered and decorated in black. Pp. 1-2 3-23 24. First edition. Publications of the Institute of National Language, Paper No. 9. Not in Zaunmüller. This copy with pencilled note on title page: "from Rufus Alejandro | [illegible initials] | 20-1-56". Alejandro was Secretary and Executive Office of the Institute of National Languages and the author of the first vocabulary in this series. Includes Tagalog-Ilocano-English vocabulary, pp. 5-23. "This vocabulary was prepared...to disprove the contentions of some school men and women that the Filipino Language had been adopted from 'Tagalog alone', and as such, it is a 'foreign language to Ilocanos'...When an Ilocano child enters grade one, he practically does not know a word of English. In contrast to this situation, he has a ready vocabulary of around 575 Filipino Language words,-a fact which the child and perhaps the teachers do not know. The 575 words in this vocabulary prove the truth. This list is not conclusive. There are some more words" (letter printed as foreword).

**1960:** [LILLYbm] *An English-Tagalog Dictionary*. Manila: Institute of National Language, Republic of the Philippines, Bureau of Printing, 1960. Original red cloth over boards, lettered and decorated in black. 412 pp. First edition. Bibliography, p. [xvii]. "Begun in 1947, this dictionary, still in draft form, went through several revisions both as to word and phrase entries and as to their meanings...This dictionary is a trial edition." The dictionary was evidently compiled by the Institute of National Language under government directive. The language became the official language of The Philippines in 1962, and its name was changed to Pilipino.

"According to an estimate about 10 million people speak and write this language. Though originated from an area called LUZON near Manila (Philippines), this language is today spoken and written by a large number of people settled in United States, Canada, Europe and almost the whole of Philippines. Tagalog is a part of Malayo-Polynesians family of languages, and is strongly influenced by Spanish language because of Spanish domination in Philippines for about 300 years" (Publisher's Note).

[TAHITIAN] Tahitian (autonym Reo Tahiti, part of Reo Mā'ohi, languages of French Polynesia) is a Polynesian language, spoken mainly in the Society Islands in French Polynesia. It belongs to the Eastern Polynesian group. Tahitian was first transcribed from the oral spoken language into writing by missionaries of the London Missionary Society in the early 19th century. When Europeans first arrived in Tahiti at the end of the 18th century, there was no writing system and Tahitian was only a spoken language. In 1797, Protestant missionaries arrived in Tahiti on a British ship called Duff, captained by James Wilson. Among the missionaries was Henry Nott (1774–1844) who learned the Tahitian language and worked with Pōmare II, a Tahitian king, to translate the English Bible into Tahitian. A system of 5 vowels and 9 consonants was adopted for the Tahitian Bible which would become the key text by which many Polynesians would learn to read and write (Wiki).

Top ½ inch of spine missing. Title page torn and remounted with loss of last two letters in Aperçu and a few letters from place of publication (Berlin) and publisher's address. Ex-library with small stamps. Pp. 1-3 4-197 198-200. First edition. Zaunmüller, col. 374. Earliest vocabulary of Tahitian listed in Zaunmüller. Wolf 838. Includes Marquesan-French vocabulary, pp. [69]-79, French-Marquesan, pp. [81]-89, (earliest vocabulary of Marquesan, along with

Mosblech) Tahitian-French, pp. 102-140, an appendix of Tahitian-French vocabulary from other sources, pp. 140-149, and a comparative table of over a dozen Malay languages, pp. 152-165.

"My Marquesan vocabulary is based on a manuscript vocabulary by Johann Reinhold Forster in the Royal Library in Berlin... The small collection of words Forster published in his 'Observations' is only a extract, and another extract was offered by Captain Cook in the report of his second voyage. These extracts were reproduced in the large vocabulary ... edited by Pallas, and in the polyglot works of Hervas and Marsden. To Forster's vocabulary I have added the fine collection of words found in Marchand's voyage... The work of Mr. John Williams on the Polynesian missions formed a small supplement to my collection... After Forster and Marchand a vocabulary of M. de Langsdorff forms an important part of my Marquesan vocabulary [taken from *Bemerkungen auf einer Reise um die Welt in den Jahren 1803 bis 1807*] (Vocabulaire Marquesan, pp. 62-64, tr: BM).

Contemporary unlettered brown quarter-cloth and brown marbled paper over boards. Pp. *i-iii* iv v, [vocabulaire français-tahitien] 5 6-56, [dictionnaire abrégé tahitien-français] 1 2-96, 1 2-78. First edition. Not in Zaunmüller. The present copy contains the complete dictionary, but does not include the separately-paginated 115 page dual-language printing (French-Tahitian) of Mark.

"We owe a great of the Tahitian-French dictionary to the works of Mm. Carré, Noury, Orsmond; above all to the excellent Tahitian-English dictionary published in Tahiti by the press of the Society of London [Davies, 1851], and to the Tahitian-French dictionary that Mr. Ribourt sent to us in 1850. The French-Tahitian dictionary is our work. We had hoped to attach to these essays the story of Tobias and the Machabees. But unforeseen circumstances have forced us to take the story of Joseph and the Book of Mark... This book is in no way a speculative venture. Anyone who publishes for such a small audience will always lose money. But it is time the schools and our compatriots had a work of this type" (Author's note, tr: BM).

Second edition **1898**: [LILLYbm] *Grammaire et dictionnaire de la langue maori; dialecte tahitien*, by Tepano Jaussen. Paris: Neia i te nenei raa no Belin, 1898. Original heavily worn blue cloth over boards, lettered in black. Pp. 1-5 6-388. Although not identified as such, this is the second edition, with a substantially enlarged dictionary. Not in Zaunmüller. Includes Tahitian-French, pp. 83-172, and French-Tahitian, pp. [175]-381, double-columned. In addition to an illegible ownership signature and the date "September 1899" in ink on the fly-leaf, this copy bears an inscription from Eug. Amiot dated 22 August 1931, at Uturoa on the island of Raiatea in the Society Islands, presenting the book to "our friend Bill," and with the bookplate of William Emil Belanske. Belanske was an artist who accompanied William K. Vanderbilt on three expeditions, including the "Alva" World Expedition of 1931-1932. His watercolors of tropical fish made from live specimens caught on the cruise of 1926 were published in: *To Galapagos on the Ara* ([New York], 1927). The originals of these as well as those executed in 1931-32 are in the permanent collection of American Museum of Natural History.

**1919**: [LILLY] *A new grammar of the Tahitian dialect of the Polynesian language, together with brief reading exercises*, by Ernest G. Rossiter. Papeete, Tahiti, 1919. 2 p. l., 290, [4] p. [errata], one typed page inserted at end. 17.1 cm. Original cloth, lettered and ruled in black. This copy with the presentation inscription of J. Frank Stimson as the "author", revised and corrected throughout in his hand (see Rossiter's Preface:

"We feel that this work may be fully relied upon as we have been fortunate in obtaining the services of Mr. J. Frank Stimson, formerly of Yale University, whose technical studies of the Tahitian, as well as of other Polynesian Dialects, have been of great assistance in completing the present grammar"). With numerous short Tahitian-English vocabularies throughout. The recipient was James Lyle Young, an Irishman who was born in 1849. He went to Australia in the mid-1850s. From 1870 to 1876, he worked on Fiji and Samoa. In May 1876, he came to Ebon to trade for Thomas Farrell. In November 1877, he went to Majuro as a trader. At the end of 1879, he moved to Jaluit to become business manager for Capelle & Co., Young travelled throughout Micronesia by ship. In October, 1881, he quit working for Capelle and went to Tahiti as manager of a company. Later he became owner of Herderson & Macfarlane of Auckland. He died in 1929 in Canberra. **1923**: [LILLYbm] *A vocabulary of English - French - Tahitian, with explanatory remarks on Tahitian dialect*, by J[ohn] Frank Stimson [1883- ], Orovini, Papeete, Tahiti: Published by O.B. Peterson for the Church of Jesus Christ of Latter-day Saints, 1924. Original blue cloth over boards, lettered and decorated in orange. Pp. [26] 1 2-60 61-70. First edition. Not in Zaunmüller. O'Reilly & Reitman 5776. This copy with the bookplate of Burton M. Doolittle and the ink inscription "Papeete, | June 1925". Includes thematically arranged English-French-Tahitian lists, pp. [1]-60, and errata, pp. [61-62]. With a manuscript list of thirty-one Tahitian names with English meanings in two columns on p. [63] and a few further manuscript additions on p. [65].

"This Vocabulary...is written for the purpose of assisting...those who are desirous of acquiring a working knowledge of the Tahitian language in the shortest possible

time....This is not a dictionary, and consequently no effort has been made to give lengthy definitions, or to list the words in any particular way so as to find them readily; but it is a vocabulary and a lesson book, and the idea of the author has been largely to group the words according to their relationship or parts of speech" (Preface).

**1930:** [LILLYbm] *A New grammar of the Tahitian dialect of the Polynesian language, and combined with a vocabulary of English, French, Tahitian, Second Edition*, arranged and published by Geo. W. Burbidge for the Church of Jesus Christ of Latter Day Saints. [n.p.], 1930. Original red cloth over boards, lettered in gold. Pp. 1-5 6-334. Second edition. Includes English-French-Tahitian vocabularies, pp. [267]-334, arranged in 64 "lessons."

"Due to the great need of a good reliable Grammar with which to enable English speaking people to acquire a knowledge of Tahitian, Ernest C. Rossiter, in 1919, published, 'The Tahitian Grammar'. This publication was followed later by a vocabulary of English, French, and Tahitian, published by O. B. Peterson, in 1924. The supply of these two books has become exhausted; therefore, with a few slight corrections and alterations, we have combined them in this book" (Preface).

**1938:** [LILLYbm] [Cover title] *Grammaire Tahitienne suivie d'un vocabulaire pratique*, by Marcel Sénac. With woodcut illustrations by Roger Parry. Toulouse: Imprimerie Régionale, n.d. [c. 1938]. Original gray wrappers, lettered and illustrated in black. First edition. Series: Bibliothèque d'Études Polynésiennes. Not in Zaunmüller. Printed dedication to André Gide. Includes a thematically-arranged French-Tahitian vocabulary, pp. [89]-127.

"It is the quasi-impossibility of finding the classic grammar of M. Tepano Jaussen, which appeared in 1898 and has long since disappeared from commerce, which has led us to publish this work today. Thus we hope to spare tourists, future colonists, sailors, and French of French-speaking functionaries, the difficulties we have had" (Introduction, tr: BM).

**1944:** [LILLYbm] *A comparative dictionary of the Tahitian language: Tahitian-English with an English-Tahitian finding list*, by Edmund Andrews [1892-1941] & Irene [Geene] D[w] Andrews [1892- ]. Chicago: Chicago Academy of Sciences, 1944. Original yellow wrappers, lettered and decorated in black. Pp. i-iv v-xvi, 1-253 254-256. First edition. Special publication, Chicago Academy of Sciences, no. 6. Reproduced from type-written copy. Zaunmüller, col. 373. Includes Tahitian-English, pp. 1-195, and English-Tahitian, pp. 197-253. Andrews was surgeon whose grandfather was one of the founders and first secretary of the Chicago Academy of Sciences. He and his wife compiled this dictionary while in Tahiti.

"This work is not the product of the authors' knowledge but of their desire to learn the Tahitian languages. It was the result of our months in Tahiti without any available dictionary....It is indeed anomalous that there is not today available any dictionary of the language which is spoke in the capital of French Oceania. Previous works, first of Bounty fame, later by the Protestant Missions, and finally the authoritative one of Msgr. Jaussen are utterly unobtainable now. The only copy of any of them in America of which the authors have knowledge is one of the latter in the Library of Congress. One can buy today in Tahiti a 'Tahitian Grammar' published by the Mormon Church. This volume unfortunately was never completed by its author, and was brought out, we have heard, without his consent from the half finished manuscript. There is no alphabetically

arranged vocabulary...and the diacritical marks are scattered through it in a reckless, haphazard manner...[A]s a aid to learning the languages...one soon realizes its total uselessness. Thus it is that the *lingua franca* of the South Seas is without even a word list.... One of us was interested in the unusual medical vocabulary of the race and the other in the remarkably poetic legends....If the work proves too top-heavy with words bearing in those fields, it is therefore quite natural. for other shortcomings we can only repeat the famous excuse of Dr. Johnson, when questioned by a lady regarding an error in his Dictionary: 'Pure ignorance, Madame.'" (Preface).

**1958:** [LILLYbm] *Tahitian-English English-Tahitian Dictionary*, compiled by Leonard Clairmont in collaboration with Mauu Ariiteuira Teriitahi. Hollywood, CA: Leonard Clairmont, n.d. [1958]. 68 pp., ill. 17.6 cm. Original tan and dark brown illustrated wrappers, lettered in brown.*First edition*. Introduction dated Papeete, Tahiti, 1958:

"This unpretentious book is by no means a complete dictionary to the Tahitian language, but is intended merely to serve as a guide to the traveller, or the casual student."

Second edition, revised, **n.d.:** [LILLYbm] *Tahitian-English English-Tahitian Dictionary*, compiled by Leonard Clairmont in collaboration with Mauu Ariiteuira Teriitahi. Hollywood, CA: Leonard Clairmont, n.d. [1960's]. Original tan and dark brown illustrated wrappers, lettered in brown. 68 pp., ill.

Third edition, revised, **n.d.:** [LILLYbm] *Say It In Tahitian. Tahitian-English English-Tahitian Dictionary. Useful Phrases and Conversation. Third Edition Revised*, compiled by Leonard Clairmont in collaboration with Mauu Ariiteuira Teriitahi. Los Angeles: Tahiti Musique, n.d. Original illustrated wrappers (sail boat and island), lettered in yellow, light blue and black, with advertisements for Tahiti Records, Papeete, Tahiti on the rear cover. Pp. [2] 1 2-69 70. Third edition, revised. Includes "Tahiti Hit Parade" list with illustrations of record covers, pp. 68-[70] and rear cover, with address "P.O. Box 478, Papeete, Tahiti."

**1973:** [LILLYbm] *Dictionnaire moderne tahitien-français et français-tahitien*, by Mai-Arii Cadousteau & Jacques Anisson de Perron. Papeete (Tahiti): Stepolde, 1973. Original brown cloth over boards, lettered in gold. Pp. 1-11 12-366 367-368. First edition. Includes Tahitian-French, pp. [11]-113, and French-Tahitian, pp. [117]-366.

"The present dictionary, while not pretending to be exhaustive, nevertheless contains almost all words utilized in present-day Tahitian. Although words which have fallen out of use have been rigorously omitted, a certain number of older terms have been retained because they remain of historic interest or occur frequently in the Tahitian Bible, upon which most linguistic exercises in Tahitian are still based" (Introduction, tr: BM).

**1964:** [LILLY] *A revised study guide and dictionary: the Tahitian dialect of the Polynesian language*, by the Church of Jesus Christ of Latter-day Saints. Papeete: Arranged and published by Thomas R. Stone for the Church of Jesus Christ of Latter-day Saints, 1964. 203 p. 28 cm. Original blue cloth, lettered in yellow.

"[This book] represents a revision and enlargement of the original 'Study Guide and Dictionary,' published in 1958, and should be considered as an introduction to the more

comprehensive ‘Tahitian Grammar and vocabulary’ first published by the church in 1930 [see above]” (from the Preface).

**1973:** [LILLYbm] *Lexique du tahitien contemporain: tahitien-français, français-tahitien*, by Yves Lemaitre. Pref. de A. G. Haudricourt. Paris: Office de la recherche scientifique et technique outremer, 1973. Original orange cloth over boards, lettered in green: dust jacket orange, black and white, lettered in black and orange. Pp. 1-9 10-201 202 + 9 blank leaves. First edition. Includes Tahitian-French, pp. [29]-139, and French-Tahitian, pp. [141]-201.

"The Tahitian dictionary offered us by Yves Lemaitre is the first dictionary in which Tahitian is correctly noted. In the recent reediting of Jaussen's dictionary [this may refer to the dictionary published in 1973 in Tahiti by Mai-Arii Cadousteau & Jacques Anisson de Perron, see above], the length of the vowels is not noted except for certain disyllabic words" (Preface). "This dictionary attempts to respond to a double demand: to present what is indeed a limited vocabulary, but one which is actually in use today, and to present this vocabulary in a coherent and precise transcription (phonetic)" (Introduction, tr: BM).

[**TAI LANGUAGES: POLYGLOT**] The Tai or Zhuang–Tai languages (Thai: **ภาษาไทย** or **ภาษาไต**, transliteration: phāśāthay or phāśātay) are a branch of the Tai–Kadai language family. The Tai languages include the most widely spoken of the Tai–Kadai languages, including standard Thai or Siamese, the national language of Thailand; Lao or Laotian, the national language of Laos; Burma's Shan language; and Zhuang, a major language in the southern Chinese province of Guangxi (Wiki).

"White Tai is found in the extreme north-western part of Vietnam... White Tai speakers call themselves and their language tay don because of the white blouses worn by the women.... One of the most comprehensive dictionaries is Diêu and Donaldson [(White) Tai-Vietnamese-English vocabulary, Saigon, 1971].... The chief center of Black Tai is at Son La in northwestern Vietnam and to the south of the White Tai speaking area... A large group of speakers live in the state of Iowa in the United States..... Scholars generally attribute the name of the group to the fact that the women wear distinctive black blouses or because the group has resided in the area of the Black River... Red Tai is located in northwest Vietnam to the south of the White Tai and Black Tai areas... Some speakers claim that the Red Tai originally came from a town called Red town... Shan is the general term for the language spoken at the western end of the Southwestern Tai dialect continuum.... Shan is often divided into Southern Shan, Shan spoken primarily in Burma, and Northern Shan, those dialects spoken around the Burma-China border. Northern Shan is also referred to as Chinese Shan (see the dialects from Che Fang, Tai Maaw, and Muong Khawn). Dialects of both Southern and Northern Shan are often indicated by place names, as in His Paw Shan. The origin of the term Shan is obscure, although it is thought to be a variant of the same word as 'Siam'." (from the introductions to the various glossaries).

[**TAI DÓN**] ai Dón, also known as Tai Khao or White Tai, is a Tai language of northern Vietnam, Laos and China (Wiki).

Includes White Thai [White Hmong]-French only, pp. 11-237. The dictionary makes up the entire issue. Minot published a French-White Thai [White Hmong] dictionary, together with an elementary grammar, in 1949. White Hmong belongs to the Tai group of languages. From the library of Carleton T. Hodge.

"One is accustomed to say that the Thai language is a poor one, and easy to learn... But its poverty must not be exaggerated. If, at times, it reveals itself as insufficient to translate modern ideas or describe the things that we have imported and of which the Tai knew nothing not many years ago, it is on the contrary in its common use both very complete and quite precise" (Foreword, tr: BM).

[**TAI NŨA**] Tai Nüa (Tai Nüa) (also called Tai Nua, Dehong Dai, or Chinese Shan; own name: Tai<sup>2</sup> Lə6, which means "upper Tai" or "northern Tai", or [tai tau xoŋ]; Chinese: Dǎinǎyǔ 傣哪语 or Déhóng Dǎiyǔ 德宏傣语; pronounced [p<sup>h</sup>ā:sǎ: t<sup>h</sup>āj nŭa] or ภาษาไทไตคอง, pronounced [p<sup>h</sup>ā:sǎ: t<sup>h</sup>āj tāj.k<sup>h</sup>ōŋ]) is one of the languages spoken by the Dai people in China, especially in the Dehong Dai and Jingpo Autonomous Prefecture in the southwest of Yunnan province. It is closely related to the other Tai languages. Speakers of this language across the border in Myanmar are known as Shan. It should not be confused with Tai Lü (Xishuangbanna Dai). There are also Tai Nüa speakers in Thailand (Wiki).

First English dictionary of this language. Second copy: IUW.

"Dehong Tai, also referred to as Chinese Shan, is the language of a minority group in the western part of Yunnan Province in the Sino-Burmese border area of Southwest China. ... Dehong Tai has a distinctive Indic-based script, recently reformed by the Chinese authorities.... The dialect under consideration is spoken in Mangshi [and]... is chosen as representative of Dehong Tai by Chinese linguists on account of its homogeneity. The text of the dictionary is compiled from the following sources: 'A Dehong Tai-Chinese lexicon' (MS, prepared by the Central Institute of Nationalities, Beijing, 1984), *A comparative lexicon of the Zhuang-Dong (Kam-Tai) languages* (compiled by the Fifth Research Group, Language Research Centre, Central Institute of Nationalities, 1985) and *A Chinese Dehong Tai dictionary* (Meng & Fang, 1991)" (Introduction) .

[**TAINO**] Taíno is a language historically spoken by the Taíno people of the Caribbean. At the time of Spanish colonization, it was the principal language throughout the Caribbean. Classic Taíno (Taíno proper) was the native language of the northern Leeward Islands, Puerto Rico, the Turks and Caicos Islands, and most of Hispaniola, and was expanding into Cuba. Ciboney is essentially unattested, but colonial sources suggest it was a dialect of Taíno. It was the language of westernmost Hispaniola, the Bahamas, Jamaica, and most of Cuba. By the late 15th century, Taíno/Ciboney had displaced earlier languages except for western Cuba and pockets in Hispaniola. Taíno declined after Spanish colonization began with the language being displaced by Spanish and other European languages. The language continued to be spoken in isolated pockets in the Caribbean until the late 19th century. As the first native language encountered by Europeans in the New World, it was a major source of new words borrowed into European languages (Wiki).

[**TAJIKI**] Tajik or Tajiki (Tajik: забони тоҷикӣ, [za' bōni tōdʒi'ki], also called Tajiki Persian (Tajik: форсии тоҷикӣ, [fər'siji tōdʒi'ki])) is the variety of Persian spoken in Tajikistan and Uzbekistan. It is closely related to Dari Persian. Since the beginning of the twentieth century, Tajik has been considered by a number of writers and researchers to be a variety of Persian (Halimov 1974: 30–31, Oafforov 1979: 33). The popularity of this conception of Tajik as a variety of Persian was such that, during the period in which Tajik intellectuals were trying to establish Tajik as a language separate from Persian, Sadriddin Ayni, who was a prominent intellectual and educator, had to make a statement that Tajik was not a bastardized dialect of Persian. The issue of whether Tajik and Persian are to be considered two dialects of a single language or two discrete languages has political sides to it (see Perry 1996). Today Tajik is recognized as a West-Iranian language. Tajik is the official language of Tajikistan. In Afghanistan (where Tajiks make up a large part of the population), this language is less influenced by Turkic languages, is called Dari, and has co-official language status. Tajik has diverged from Persian as spoken in Afghanistan and Iran due to political borders, geographical isolation, the standardization process, and the influence of Russian and neighboring Turkic languages. The standard language is based on the northwestern dialects of Tajik (region of old major city of Samarqand), which have been somewhat influenced by the neighboring Uzbek language as a result of geographical proximity. Tajik also retains numerous archaic elements in its vocabulary, pronunciation, and grammar that have been lost elsewhere in the Persophone world, in part due to its relative isolation in the mountains of Central Asia (Wiki).

Lithographed throughout in the author's hand, reproducing the rare Tifinagh script along with the roman script of the French. Includes a table of the Tifinagh script. With the bookplate of W. Marçais. William Marçais was a noted Arabic philologist born in 1872 and author of *Le Dialect arabe parlé à Tlemcen* (Paris, 1902), *Textes arabes de Tanger* (Paris, 1911), and *Textes arabes de Takrouna: contribution à l'étude du vocabulaire arabe*, 8 vols. (Paris: CNRS, 1961), among others. S. Cid Kaoui, himself a Berber by birth, was a military interpreter for the French, posted to Ouargla, Algeria in 1887. He worked first on a French-Kayble dictionary, then on the French-Tamahaq dictionary, for which he developed his own transcription system.

"Up to the present, there exists no complete French-Tamahaq dictionary, and at a time when the trans-Saharan question exercises such a lively hold on the public mind, and at a time of colonial expansion projects, an exact and precise knowledge of the language of the people one is dealing with is clearly mandatory. The Tuaregs, who inhabit an area which extends into the southern parts of our Algerian possessions, remain isolated and avoid contact with us; we have need of them to carry out the grandiose plans of our civilization; they must therefore be the constant object of our studies and considerations. Only by means of a thorough knowledge of their language, their customs and their aspirations will we be able to make ourselves known to them, will we be able to remove the horror they have of our mores and our institutions and thus make our way among them" (tr: BM).

**1900:** [LILLYbm] *Dictionnaire pratique Tamâheq-Français (langue des Touareg) contenant 1° plus de six mille mots de la langue Tamâheq; la traduction en français de tous ces mots avec la prononciation figurée en caractères français et en caractères tifinar'; leurs différentes acceptions, avec de nombreux exemples, dictons, proverbes, traits de mœurs des Imouhar', etc.; 2° l'indication du genre, du nombre des noms; les formes verbales, etc.*, by S. Cid Kaoui (see notes for previous entry). Alger: Adolphe Jourdan, 1900. Original tan wrappers, lettered and decorated in black. Pp. I-VII VIII, I-IV, 1-2 3-441, I II III. First edition. Zaubmüller, col. 30. Hendrix 344. With the book plate of William Marçais (see notes for previous entry). Includes, pp. I-IV, a table of the Tifinagh script. Together with the French-Tamahaq dictionary of 1894, this constitutes the first complete dictionary of the language. A Tamahaq-English vocabulary was appended to a grammar in 1862 (see above).

"The Tamahaq-French dictionary published today is the indispensable complement to the French-Tamahaq dictionary edited in 1894, of which it is, unfortunately, merely an extract. Obligated for reasons of health to distance myself from the Saharan regions, deprived of any means of information or cross-checking, I have not been able to enlarge the present work as I had wished... The Tamashaq language is still little known; it was therefore necessary to place in the hands of those who study the language a practical dictionary that would allow them to find the word they were searching for" (tr: BM).

The full, four-volume dictionary appeared in 1951-1952.

"On his last voyage to French (1913) Father Foucauld passed on to me the manuscript of the Hoggar-French dictionary that appears today. The publication of the work was delayed by the outbreak of the war in 1914... it should be noted that the dictionary published here is only a small part of the manuscripts Father Foucauld passed on to me... A volume uniting an essay on the grammar and a French-Tamahaq vocabulary appeared in 1908, under the auspices of the governor-general of Algeria" (Preface, tr: BM). Father Foucauld's manuscripts included prose texts, poetry, dialogues, grammatical notes, and a 2,000 page encyclopedic dictionary of Hoggar, published in 1951-52 (see below).

"Father Foucauld didn't have time to produce a French-Tamahaq dictionary. He only left us a Tamahaq-French dictionary. A first abridged two-volume edition was published by René Basset [see above], and the complete four-volume edition was published by the Imprimerie nationale de France in 1951 [see above]. It was in order to make use of that dictionary that we have produced the present French-Tamahaq dictionary.... We thought it would be worthwhile to include certain words not in the Father's dictionary that appeared in the small lexicon of Motylinski in 1908. We have also picked up, or others have brought to our attention, several present-day Touareg

words that do not appear in the Father's dictionary, or appear there in a different sense" (Foreword, tr: BM).

[**TAMASHEQ**] Tamasheq is a variety of the Tuareg languages. It is spoken by the Tuareg people, principally in the Timbuktu area. There are two divergent dialects: Timbuktu (Tombouctou, Tanaslamt) and Tadghaq (Kidal) in Mali. Tamasheq as spoken in northeastern Burkina Faso is similar. The name Tamasheq is sometimes applied to the Tuareg languages in general (Wiki).

[**TAMAZIGHT, CENTRAL ATLAS**] Central Atlas Tamazight language (also known as Central Morocco Tamazight, Middle Atlas Tamazight, Tamazight, Central Shilha, and, rarely, Braber; native name: Tamazight [tæmæ'ziyt], [θæmæ'ziyθ]) is a Berber language of the Afro-Asiatic language family, spoken by 3 to 5 million people in the Atlas mountains of Central Morocco, as well as by smaller emigrant communities in France and elsewhere. Central Atlas Tamazight is one of the most-spoken Berber languages, along with Kabyle, Shilha, Riff, and Shawiya, and in Morocco it rivals Shilha as the most-spoken. All five languages may be referred to as 'Tamazight', but Central Atlas speakers are the only ones who use the term exclusively.

Central Atlas Tamazight (unlike neighbouring Tashelhit) had no known significant writing tradition until the 20th century. It is now officially written in the Tifinagh script for instruction in Moroccan schools, while descriptive linguistic literature commonly uses the Latin alphabet, and the Arabic alphabet has also been used (Wiki)..

First edition. Hendrix 332. Includes Tamazight-English, pp. 3-153, English-Tamazight, pp. 157-234, as well as cultural and a linguistic lexica.

"The language of this book is Tamazight, a dialect of Berber spoken in the middle Atlas Mountains of Morocco. Berber is spoken mainly in North Africa (Libya, Tunisia, Algeria and Morocco) and in Siwa (UAR). It is also spoken by the Tuareg groups in Mauritania and the countries of the Sahara (Mali, Niger and Chad). Berber, a branch of the Afro-Asiatic family of languages is an unwritten language. It is divided into some three hundred or more local dialects. The number of speakers of Berber has been estimated between 5,000,000 and 7,000,000...the speakers of Tamazight ... number approximately 2,000,000...The Ayt Seghrouchen live by farming and sheep herding. They live either in tents or in mud-brick houses" (Introduction). This appears to be the

first English language dictionary of Tamazight. In 1907 S. Cid Kaoui published a French dictionary that included Tamazight. A French Tamazight lexicon was also published by Taifi in Paris in 1992.

[**TAMIL**] Tamil (English pronunciation: /'tæmɪl/; Tamil; [t̪ɐmɪɻ]) is a Dravidian language predominantly spoken by the Tamil people of India and Sri Lanka, and also by the Tamil diaspora, Sri Lankan Moors, Burghers, Douglas, and Chindians. Tamil is an official language of two countries, Singapore and Sri Lanka. It has official status in the Indian state of Tamil Nadu and the Indian Union Territory of Puducherry. It is one of the 22 scheduled languages of India. Tamil is one of the longest-surviving classical languages in the world. It has been described as "the only language of contemporary India which is recognizably continuous with a classical past." The variety and quality of classical Tamil literature has led to it being described as "one of the great classical traditions and literatures of the world". In 1578, Portuguese Christian missionaries published a Tamil prayer book in old Tamil script named 'Thambiraan Vanakkam,' thus making Tamil the first Indian language to be printed and published. The Tamil Lexicon, published by the University of Madras, was one of the earliest dictionaries published in the Indian languages (Wiki).

**1834-1841:** [LILLYbm] *A Dictionary, of the Tamil and English Languages*, by J.P. Rottler. In four parts. Madras: Printed at the Vepery Mission Press, 1834-1841. Late-19<sup>th</sup> century brown half-leather and green paper over boards, lettered in blind. "Vol. I Part I" (1834): 300 pp.; "Vol. I. Part II" (1836-7), 410 pp. + x pp.; "Part III" (1839, "Revised by Rev. W[illiam] Taylor, and T. Vencatachala Moodelly"): 456 pp.; "Part IV" (1841, "Revised by Rev. W[illiam] Taylor, and T. Vencatachala Moodelly"): 248 pp. First edition. Zaunmüller, col. 374. Shanmuganar 16.

Note from Part II: "The revision, conducted by the Author, up to the period of his lamented decease, comes down to page 204. Of this part the further revision, with the same native assistance, was confided to the Reverend William Taylor in May 1836...the copy right by the Author's will, having been bequested to the Vepery Mission Press."

Note from Part III: "To any one unacquainted with the extent, and re-iteration, of labor connected with the revisal and publication of this dictionary, the issue may appear to be slow. The revisal, and printing, of the first part, containing 298 pages, occupied six years; the second part...engaged [the original compiler's] attention for nearly two years...and ...in the hands of the present reviser, [was] completed in one [further] year. The revisal of the entire third part, of 455 pages, has been finished in two years; the arrears of printing requiring another half year...The object of this brief notice is to shew, that cause of delay exists rather in the subject-matter, than in the mode of operation."

Prefatory remarks to Part IV: "It was once the intention of the writer of this notice...to have devoted some attention and labor to the production of a preface to the whole work. But the rich and full experience of unforeseen peculiarities, consequent to the task a little incautiously commenced, rather took off the keen edge of literary appetite; and induces him now to offer little other than the results of disgust and satiety... [Be that as it may] the deficiency which [Humboldt] a few years since expressly lamented, that is, the want of a good Tamil and English Dictionary, is by the present one very adequately supplied.... The Tamil language [is] one of the most copious, refined, and languages spoken by man." Shanmuganar lists Fabricus's Tamil-English dictionary of 1779, published in Madras, and including Malayalam as the only prior Tamil-English dictionary.

[8] 1-970 971-972. Second edition. Not in Zaunmüller. Revision of Shanmuganar 19. This copy with the bookplate and withdrawal stamp of the Theological Library of the Luther Theological Seminar at Gettysburg, Pa. With the pencil ownership signature of Rev. G. Maltby, dated 21 October 1862 [possibly the brother of T. J. Maltby, author of *A practical handbook of the Uriya or Odiya language* (1874)]. Revision of an earlier work [1844] by Joseph Knight and Levi Spaulding. Preface signed: L. S. [i.e. Levi Spaulding]. Includes English-Tamil, pp. 1-970.

"In preparing this second edition of the English and Tamil Dictionary, all the words in Dr. Webster's complete work, which are thought to be of practical utility to missionaries or civilians among the Tamil people, or to Tamil youth who are studying the English language, have been most carefully added to the old edition... This edition contains thirty-six thousand seven hundred and thirty-seven English words, being an enlargement of eight thousand nine hundred and eighty-four over the first edition.... Not only as to enlargement, but in respect to accuracy of definition, division, and arrangement of the different significations, this edition is believed to be a great improvement upon the previous one" (Preface).

"In one respect the Tamil has an advantage over the other vernaculars of India. It has a greater amount of Christian literature... It will be seen... that a Lexicon which will enable a student to read their books in poetry, as well as prose, is very necessary. Hitherto the Dictionary of Dr. Rottler has been the only one professing to give any aid to the student in reading Narive books... and that, though very valuable, was too limited in its vocabulary, and deficient in Astrological, Mythological and Scientific terms, fully to answer the purpose. It is very much confined to the Tamil of the Continent, not

embracing much that is in good use in Ceylon" (Preface). With history of the long-delayed publication of this work, including the story of the two earlier English-Tamil editions prepared by Knight and Spaulding from the same materials. This dictionary is thus a companion to the English-Tamil dictionary of 1852 (second edition) and with it forms a complete two-way dictionary superceding Rottler's. A list of subscribers and donors is given on pp. [xiii-xiv]. "This dictionary contains more than 67,000 words, and Rottler's nearly 37,000" (note on final page of dictionary).

[TANAINA] Dena'ina /dɛ'namə/, also Tanaina, is the Athabaskan language of the region surrounding Cook Inlet. It is geographically unique in Alaska as the only Alaska Athabaskan language to include territory which borders salt water. Four dialects are usually distinguished: [1] Upper Inlet, spoken in Eklutna, Knik, Susitna, Tyonek; [2] Outer Inlet, spoken in Kenai, Kustatan, Seldovia; [3] Iliamna, spoken in Pedro Bay, Old Iliamna, Lake Iliamna area; [4] Inland, spoken in Nondalton, Lime Village. Of the total Dena'ina population of about 900 people, only 75–95 members still speak Dena'ina. James Kari has done extensive work on the language since 1972, including his edition with Alan Boraas of the collected writings of Peter Kalifornsky in 1991. Joan M. Tenenbaum also conducted extensive field research on the language in the 1970s (Wiki).

**1874:** [LILLYbm] *Leopold Radloff's Wörterbuch der Kinai-Sprache*, ed. by A[nton] Schiefner [1817-1879]. St. Petersburg: Académie Impériale des Sciences, 1874. Series: Mémoires de l'Académie Impériale des Sciences de St.-Petersbourg, VIIe serie, Tome XXI, No. 8. Original tan wrappers, lettered and decorated in black (lacking rear wrapper). Pp. [2] I II-X, 1 2-33 34. First edition. Not in Zaunmüller. Includes German-Kinai, pp. [1]-33. First dictionary of this language, identified as an Athapaskan language spoken in Alaska, almost certainly present-day Tanaina, as spoken in Kenai, Alaska. It is

discussed here along with references to Ahtna around Copper River in South Central Alaska, which is known today by only a few native speakers (see **AHTENA**).

"The city of Kenai is named after the local Dena'ina (Tanaina) word 'ken' or 'kena', which means 'flat, meadow, open area with few trees; base, low ridge', according to the Dena'ina Topical Dictionary by James Kari, Ph.D., published in 2007. This describes the area along the mouth and portion of the Kenai River near the City of Kenai. Before the arrival of the Russians, Kenai was a Dena'ina village called Shk'ituk't, meaning "where we slide down." When Russian fur traders first arrived in 1741, about 1,000 Dena'ina lived in the village. The traders called the people "Kenaitze", which is a Russian term for "people of the flats", or "Kenai people". This name was later adopted when they were incorporated as the Kenaitze Indian Tribe in the early 1970s" (Wiki).

The original manuscript material for the Kinai [Tanaina] dictionary was gathered by Leopold Radloff, who died before it could be published. Schiefner eventually took over the task of editing the material, including word lists from other sources, as discussed in the preface. This copy with the ink ownership stamp of Wilhelm Grube, author of the *Goldisch-Deutsches Wörterverzeichnis*, St. Petersburg, 1900, the first dictionary of Nanai.

"Vocabularies such as one finds at the end of travel books are often quite extensive,--but what guarantee do we have of their accuracy? The linguist should accept such lists with thanks since they open new paths, but also with caution, for the paths they open are often slippery'. Although we share these sentiments, and find them supported even in the material offered here, we still must hope, in the interest of linguistic research and ethnography, that future travelers do not tire of assembling wherever possible extensive and comprehensive vocabularies that reflect when possible the entire life and activities, the whole world of ideas, of individual tribes, even if they are not granted the opportunity to devote themselves to a truly thorough study of the languages" (Foreword, tr: BM).

Original black plastic spiral binding and brown wrappers lettered in black. Pp. [4] 1-355 (with the number 220 omitted in the pagination). First edition. 400 copies. Includes English-Tanaina vocabulary, thematically arranged, pp. 23-285, with Tanaina-English index, pp. 286-353. Second copy: IUW.

"The name 'Tanaina' is the anglicized version of 'Dena'ina', which means 'the people'. The spelling and pronunciation 'Dena'ina' is strongly preferred by the people, especially those who read and write their language" (note to Preface).

"This is a dictionary of nouns for the Dena'ina...language of Alaska's Cook Inlet Basin... The dictionary contains...about 5,500 Dena'ina entries. It has been cross-checked in all four Dena'ina language areas... Many of the sections are considerably more detailed than are similar wordlists for other Athabaskan languages. The bird list, with 122 bird names, and the plant list with 259 items, are particularly noteworthy. Dena'ina vocabulary is very colorful and distinctive. Many Dena'ina words are found nowhere else in Athabaskan... The dictionary also contains many obscure and fascinating items of Dena'ina life that have not been noted before for an Athabaskan people" (Preface).

[**TANGALE**] Tangale (Tangle) is a West Chadic language spoken in Northern region of Nigeria. The vast majority of the native speakers are found across Akko, Billiri, Kaltungo and Shongom Local Government Area of Gombe State Nigeria (Wiki).

**1991:** [LILLYbm] *A dictionary of the Tangale language: (Kaltungo, Northern Nigeria)*, by Hermann Jungraithmayr. Berlin: Dietrich Reimer, 1991. Original green cloth over boards, lettered in gold. Pp. 1-7 8-218 219-220 with linguistic map. First edition. Series: Sprache und Oralität in Afrika, vol. 12. Includes Tangale-English, pp. 65-171, and English-Tangale, pp. 175-217, double columns. First dictionary of Tangale. The author wrote his doctoral dissertation on the Tangale language in 1956 with Johannes Lukas at Hamburg University. Second copy: LILLYbm, in wrappers: original green wrappers lettered in green.

"Tangale country lies some 30-40 miles south of Gombe...in a hilly landscape the outstanding landmark of which is the Tangale Peak (ca. 1300 m). It forms part of the former Tangale-Waja District in Bauchi State, North-eastern Nigeria... The main division linguistically as well as politically within the Tangale speaking area, which comprises some 30 villages with a total population of approximately 70,000 people, is between Billiri (Biliri) in the northwest and Kaltungo in the southeast."

[**TAUSUG**] Tausug (Tausug: Bahasa Sūg, Malay: Bahasa Suluk, Filipino: Wikang Tausug) is a regional language spoken in the province of Sulu in the Philippines, in the eastern area of the state of Sabah, Malaysia, and in North Kalimantan, Indonesia by the Tausūg people. It is widely spoken in the Sulu Archipelago (Basilan, Sulu and Tawi-Tawi), Zamboanga Peninsula (Zamboanga del Norte, Zamboanga Sibugay, Zamboanga del Sur, and Zamboanga City), Southern Palawan, Malaysia (eastern Sabah) and Indonesia (North Kalimantan). Tausug and Chavacano are the only Philippine languages spoken on the island of Borneo. The Tausug language is very closely related to the Surigaonon language of the provinces Surigao del Norte, Surigao del Sur and Agusan del Sur, and to the Butuanon language of northeastern Mindanao (Wiki).

Ethnologue: tsg. Alternate Names: Bahasa Sug, Jolohano, Moro Joloano, Sinug, Sinug Tausug, Sulu, Suluk, Tausog, Taw Sug.

**1893:** [LILLY] *English-Sulu-Malay vocabulary with useful sentences, tables, &c.*, by Andson Cowie, edited by Wm. Clark Cowie. London: Printed for the Editor by T. May, 1893. Original dark brown cloth, lettered in gold and decorated in blind. Pp. I-IX X-XLVIII, 1 2-288. First edition. Only ed. cited in NUC pre-56 125:494 and BM 45:209. Not in Zaunmüller. Presentation copy from the author dated 1893 to a member of parliament. Extensively annotated in black ink. Folded ms. sheet "Comparative vocabulary of the languages of British North Borneo," [3] p., pasted to back endpaper. With the bookplate of Peter Antony Lanyon-Orgill. Appears to be first English dictionary of the language.

"The whole of the Sulu portion of this work is original. It is the result of the labour of my late brother Andson, who devoted much time to the study of several native dialects during the thirteen years he resided in the Island of Sulu and various parts of Malaya...The author's object in adding Malay, to what he originally designed as a Sulu work only, was to accelerate the further fusion of two dialects which have so much

affinity and which will make the language of North Borneo the English of the farther East" (Preface). "The Sulu people are a bold, fearless race, and up to a very recent date, were most notorious pirates. In their lovely isles they lived comparatively contented until their ancient enemies the Spaniards gained a footing amongst them. Now all is changed! Spanish rule is hateful to them and many are leaving the Sulu archipelago for British North Borneo. In time they should make valuable subjects to the Chartered Company, but, whilst taming, they will require very careful treatment" (Introduction).

[**TANZANIAN SIGN LANGUAGE**] Seven or so Tanzanian sign languages were developed independently among deaf students in separate Tanzanian schools for the Deaf starting in 1963, though use of several is forbidden by their schools. In 1984, a standardized Tanzanian Sign Language was proposed by the Tanzania Association for the Deaf, using common or similar signs where these exist in the schools which allowed research, but it has not been officially implemented, and there remains little influence between the languages. A dictionary has been produced [see below]. The common Swahili name in Tanzania for these languages is *Lugha ya Alama*. (The name *Lugha ya Bubu* is also used, but is reported by Ethnologue to be pejorative) (Wiki).

[**TARAHUMARA**] The Tarahumara language (native name *Rarámuri/Ralámuli ra'ícha* "people language") is a Mexican indigenous language of the Uto-Aztecan language family spoken by around 70,000 Tarahumara (*Rarámuri/Ralámuli*) people in the state of Chihuahua, according to an estimate by the government of Mexico. There is no consensus among specialists on the number of dialects: competing proposals include two (Western and Eastern); four (Western, Northern, Southern, Eastern); and five, according to field surveys conducted in the 1990s by linguists working for the Mexican government and Ethnologue. Mexican researchers emphasize that the knowledge of *Rarámuri* dialects is still patchy, and they say there is a possibility that there are many more than five dialects. The five divisions tentatively recognized by the Mexican government are not the same ones proposed by Ethnologue (Wiki).

Ethnologue lists five separate languages under the heading *Tarahumara*: 1) Central *Tarahumara* [tar]; 2) Northern *Tarahumara* [thh]; 3) Southeastern *Tarahumara* [tcu]; 4) Southwestern *Tarahumara* [twr]; and 5) Western *Tarahumara* [tac].

Includes: Tarahumara-English, pp. 59-501, and English-Tarahumara, pp. 505-1144. This copy inscribed in ink on the free endpaper: "To Mrs. Marjory Stoneman Douglas / With my compliments / I. Thord-Gray." Douglas was author of novels, short stories and other works including *The Everglades: river of grass* (1947), *Alligator crossing* (1959), and *Nine Florida stories* (1990). This is the first English dictionary of the language and by far the most complete. Second copy: IUW.

"This lexicon is an attempt to provide an approach to an understanding of the Tarahumara, one of the more important North American tribal groups that have, to an extent, survived the civilizing of their conquerors.... Rapid changes are taking place among these people. In a few years it may be difficult to distinguish the old from the new... The Tarahumara is apparently not very closely related linguistically to any other culture, except perhaps, to the Varohio..., but lexically the language belongs to the Uto-Aztec group, which consists of widely scattered tribes and languages" (Preface). "The Indians known as the Tarahumara... live in the most mountainous region of the Sierra Madre, in the West and Southwest area of the State of Chihuahua, Mexico.... Barring the Nahuatl... the Tarahumara appear to be the largest tribe North of Mexico City. Their total population is now only about forty to forty-five thousand. But at one time... they must have been in vast numbers, perhaps somewhere near a million. Their legends say that they were more numerous than the grass on the mesa" (Introduction).

"It is readily evident that this dictionary is much more than a vocabulary but a compilation of anthropological and linguistic data as well" (Bartholomew).

Griffin was author of *Los mozarabismos del "Vocabulista" atribuido a Ramon Marti* (Madrid, 1961). Together with the previous volume, this constitutes the first complete dictionary of Tarifit.

"There are two major goals in publishing this Rif-Spanish dictionary. First to provide for the studios a new means of learning the Rif Berber dialect... Secondly to offer to the native speakers a vehicle that will allow them to gain a complete command of the Spanish language...[The present dictionary] is a complement to our previously published *Diccionario Español-Rifeño* [see above]... With the publication of this first Rif-Spanish dictionary, we believe we have brought to fruition a project begun with such hopes for the future by Father Pedro Hilarión Sarrionandia" (Introduction, tr: BM)

Rif is one of three major dialects of the Berber language, spoken in the mountainous Rif region of Morocco. "Whatever these dialects be called, the Kabyle, the Shilha, the Zenati, the Tuareg or Tamashak, the Berber language is still essentially one, and the

similarity between the forms current in Morocco, Algeria, the Sahara and the far-distant oasis of Siwa is much more marked than between the Norse and English in the sub-Aryan Teutonic group" (Encyclopedia Britannica, 13<sup>th</sup> ed.)

[**TAT, MUSLIM**] The Tat language or Tat/Tati Persian or Tati (Tat: zuhun tati) is a Southwestern Iranian language related to, but mutually unintelligible with Persian and spoken by the Tats in Azerbaijan and Russia. Its written form is related to Middle Persian Pahlavi. There is also an Iranian language called Judeo-Tat spoken by Jews of Caucasus. The Tats are an indigenous Iranian people in the Caucasus who trace their origin to the Sassanid-period migrants from Iran (ca. fifth century AD). Tat is endangered, classified as "severely endangered" by UNESCO's Atlas of the World's Languages in Danger. Most scholars divide Tat into two general varieties: Jewish and Muslim, with religious

differences correlating with linguistics differences. Another, almost extinct variety of Tat is spoken by Christians of Armenian origin, who are called Armeno-Tats. According to the 1989 Soviet census, 30,000 Tats lived in the Soviet Union, of which 10,000 were in Azerbaijan. The adults in most of the mountain and foothill communities reported they use Tat as their main language of interaction. They speak Tat with each other, but speak Azerbaijani with their children so that they will learn the language before beginning school. If the wife in the family is non-Tat speaking, however, the family is most likely to use Azerbaijani in the home. In the villages of Lahıc and Zəyvə, women who marry in are reported to learn Tat (Wiki).

[TASMANIAN LANGUAGES: POLYGLOT] The Tasmanian or Palawa languages were the languages indigenous to the island of Tasmania. The languages were last used for daily communication in the 1830s. The last full-blooded Tasmanian died on Flinders Island in 1888, but a Tasmanian lingua franca continued to be used until 1905, with the death of the last known speaker, Fanny Cochrane Smith. Tasmanian Aborigines today speak English. Tasmanian languages are attested by three dozen word lists, the most extensive being those of Joseph Milligan [see below **1857** and **1866**] and George Augustus Robinson. All these show a poor grasp of the sounds of Tasmanian, which appear to have been fairly typical of Australian languages in this parameter. Plomley (1976) [see below] presents all the lexical data available to him in 1976. Crowley and Dixon (1981) summarise what little is known of Tasmanian phonology and grammar. Bown (2012) teases apart the mixture of languages in many of the lists and attempts to classify them into language families (Wiki).

Ethnologue does not include Tasmanian languages.

Return to address to His Excellency the Governor; and ordered by the Council to be printed, 23 February, 1857. 20 pp. One of a series of reports (this No. 7) by Joseph Milligan to the Tasmanian parliament. May be earliest printed vocabulary of Tasmanian aboriginal dialects.

**1866:** [LILLY] *Vocabulary of the dialects of some of the aboriginal tribes of Tasmania*, by Joseph Milligan. Hobart Town, Tasmania: J. Barnard, Government Printer, 1866. 36. pp. Later half-leather binding by Bayntun. This vocabulary was first published in 1859 in the *Papers and Proceedings of the Royal Society of Tasmania*, Vol. 3, Pt. 2. It was then issued by the Government Printer in Tasmania in this separate edition in 1866 of 36 pages. Includes English-Tasmanian (3 different groups of tribes identified by geographical area), pp. 16-52, with "short sentences in the native language, pp. 53-55, place names, pp. 56-57, names of aborigines, pp. 58-59, and an appendix of a list of words used by natives of the Oyster Bay tribe copies from the 1826 manuscript of Thomas Scott, p. 60. This copy belonged to E.M. Curr and has his penciled annotations and a note on p. 35. The memoirs of Edward Micklethwaite Curr [1820-1889], *Recollections of squatting in Victoria, then called the Port Phillip District, from 1841 to 1851*, were reprinted by Cambridge University Press in 1965.

"The day is not far distant when, according to the ordinary course of nature, the last of the surviving remnant of the aboriginal inhabitants of Tasmania, now maintained at a Government establishment, and little more than a dozen in number, must be removed by death, and a distinct people cease to exist.... [U]nder such circumstances, every scrap of authentic information regarding the aborigines of Van Diemen's Land may be regarded as of some value" (pp. [5], 7).

*Oriental Silverwork* (1910), all of which are much sought after" (Gaston Renard bookseller's description).

"In the present work, the recorded knowledge as to the extinct native race of Tasmania has been brought together with, I think, an approach to absolute completeness" (Preface).

"The disappearance of the Tasmanian race is a unique instance of the pathos and the mystery of human destiny. Everybody, we suppose, has read that the Tasmanians were exterminated, not only in regular warfare, but also in the sport of civilized Europeans out for a day's shooting. And it is quite true that, between 1825, when the war against the blacks began, to 1834, when the last starved remnants of the race were removed to Flinders Island, parties of Christian whites would go larking forth into the forest on the chance of bagging niggers... But the story has its humane side, although, as shown by Mr. Roth, the humanity was fatally misdirected" (from a review of 1899 in the *Daily News*, loosely inserted in the book).

**1955:** [LILLYbm] *Tagabili vocabulary*, by Vivian Forsberg & Alice Lindquist. Manila: Published by the Summer Inst. of Linguistics in cooperation with the Bureau of

Public Schools and the Institute of National Language of the Department of Education, 1955. Original green wrappers, lettered in black. Pp. [4] 1-160. First edition. Not in Zaunmüller. Includes Tagabili-English, pp. 1-95, and English-Tagabili-Tagalog, pp. 97-159. This copy with the ownership signature in ink on front cover of Fred Eggan. Eggan was author, among others, of *Historical changes in the Choctaw kinship system*, 1936, *The kinship system of the Hopi Indians*, 1936, *Social organization of the western pueblos*, 1950, and *Selected bibliography of the Philippines, topically arranged and annotated*, 1956. First dictionary of the language.

"Tagabili is a dialect spoken by an estimated 20,000 people living in southern Catabato, Philippines.... They are almost entirely monolingual, though a few, through contacts with the settlers, have learned some Hiligaynon.... The authors lived, during the years 1953-55, in the barrio of Sinolon, in the Alah Valley, where the material for this vocabulary has been obtained" (Introduction).

[**TEDAGA**] The Teda language, also known as Tedaga, is a Nilo-Saharan language spoken by the Teda people in southern Libya, northern Chad, and eastern Niger. Along with the southern dialect of Daza, the northern Teda dialect constitutes one of the two varieties of Tebu. However, Teda is also sometimes used for Tebu in general (Wiki).

[**TEHUELCHÉ**] Tehuelche (Aoniken, Inaquen, Gunua-Kena, Gununa-Kena) is a Chon language of Patagonia. Its speakers were nomadic hunters who occupied territory in present-day Chile, north of Tierra del Fuego and south of the Mapuche people. It is also known as Aonikenk or Aonek'o 'ajen. The decline of the language started with the Araucanization of Patagonia, when many Tehuelche tribes adopted Mapudungun as their main language. While being quite separate from each other, the Tehuelche were considerably influenced by these two other languages and cultures. This allowed the transference of morpho-syntactical elements into Tehuelche. During the 19th and 20th centuries, Spanish became the dominant language as Argentina and Chile gained independence, and Spanish-speaking settlers took possession of Patagonia (Wiki).

(bookseller's description: Löwendahl).

"The following Dictionary was commenced soon after the publication of the Author's Teloogoo Grammar; and, the copyright of it having been purchased by the Madras Government, they have directed it to be printed at the College Press... Composed, as this work has been, at intervals, and often in the midst of all the bustle of a Collector and Magistrate's Office, the Author begs to crave for it some indulgence from the public"(Advertisement). Vol. I: A-K; Vol. II: L-Z. Zauhmüller, col. 377, giving "Madras 1835" with no indication the work is in two volumes. With the ownership signature H. Figulla, dated 1910, on each title page. Heinrich Hugo Figulla was author of scholarly works on the Near East, including *Altbabylonische Verträge* (Leipzig, 1914) and *Keilschrifttexte aus Boghazkoi* (Leipzig, 1916), both published by J.C. Hinrichs. According to information from OCLC, *The Madras Herald* with its alternate title the *Madras Male Asylum Herald* was

published in the 1830's by G. Calder twice weekly in Madras, beginning in 1833. First English-Telugu dictionary. The first Telugu-English dictionary was published by A.D. Campbell in Madras in 1821 (see above).

"The following dictionary was compiled under the auspices of the Board for the College and Public Instruction, and was, at their recommendation purchased by the Government of Fort St. George, on account of the East India Company, to whom the copyright has been assigned. A Dictionary English and Teloogoo, has been long required, not only for the purpose of assisting Europeans in the study of Teloogoo, but also to aid Natives of this Country in the acquirement of English...It has been intended that the Dictionary should embrace every English word of ordinary occurrence, with the exception of terms of science, or the names of trees, fruit, instruments &c. peculiar to Europe and unknown in India...It was at first contemplated to support the use of Teloogoo words of uncommon acceptation by quotations from Authors in that language and the plan was actually adopted in the first few pages of the Dictionary, as however it was feared that it would unnecessarily increase the bulk of the Work, the attempt was abandoned."

"Though speech may have been given to express our thoughts, writing was intended, according to the Telugu practice, to obscure them... The pedantry of 'grammatical' Telugu is tragically absurd... Now it may be a pity, but it is a fact, that...the educated Telugu learns to think and to express himself not in Telugu, but in English...the Telugu graduate write[s] dog-Telugu [like dog-Latin] because his thought was born in English and resists transmigration. When he tries to reincarnate it in a language not his own, that is in the Sanskritized and obsolescent dialect of the pundits, the infant becomes a monster...It does not follow that English is in any way likely to oust Telugu. Telugu is a living language because millions speak it in the villages, and the Telugu of the villages will go its own course in spite of the graduates...Should the period of English dominance end to-morrow and the Andhras form their own government, they must make an attempt to conduct their affairs in their own language... The author of this dictionary has

compiled words in common use from Cocanada to Bezwada. In so defining his limits and purging his language he has taken one step towards the King's Telugu...[This dictionary thus attempts to] establish...a norm and encourag[e] [Telugu] men of genius to use the tools most fitted for their work." From the library of Carleton T. Hodge, with his signature dated November, 1955, Madras, India.

"According to the latest figures, the total number of Temiar is now about 8,500. Almost all of them live in the deep jungle areas of Perak and Kelantan, with the exception of a small group now settled in Pahang. The Temiar practice a form of shifting agriculture that implies an only partly settled form of economic existence... In the more accessible areas, the majority of Temiar men speak Malay as a second language, but this is much less true of their women... There can be no doubt that Temiar is not a Malay dialect, but an active and vigorous language in its own right" (Introduction).

"This word list was collected in Temiar Settlements on the Upper Nenggiri River, Kelantan, during April and May 1958. For easy comparison, Malay equivalents are given

in the right had column of each page... Stress in Temiar words is always on the second syllable" (p. 86).

[**TESO**] Ateso (from Teso) is an Eastern Nilotic language spoken by the Iteso people of Uganda and Kenya. It is part of the Teso–Turkana language cluster. According to the 2002 Uganda population and housing census, over 1.57 million people (6.7% of the total Uganda population) in Uganda spoke Ateso. Also an estimated 279,000 people in Kenya speak it. The Ateso language comes from an area called Teso (Wiki).

**1915:** [LILLYbm] *A Handbook of the Ateso Language*, by A[rthur] L[eonard] Kitching. London: Society for Promoting Christian Knowledge, 1915. Original blue cloth over boards, lettered in black. Pp. *i-iv v-ix x*, 11-144. First edition. Not in Zaunmüller. Includes Ateso-English, pp. 53-89, and English-Ateso, pp. 90-125. This is the first dictionary of the language.

"The Ateso dialect is spoken by a tribe of some 300,000 people living between Lake Kioga and Mt. Elgon in the Eastern Province of the Uganda Protectorate. The Teso are a cheerful, industrious people, amenable to control and eminently teachable. Although now for some six years only in contact with civilization, the tribe has made phenomenally rapid progress in the arts of peace; the cultivation of cotton and labour on the construction of metalled roads has provided even the poorest peasants with abundant cash, and European articles, from cigarettes to bicycles, are in eager demand. Yet the name of this tribe does not appear, so far as the author is aware, in any of the works on the peoples of the Uganda Protectorate. The Teso appear to belong to the same Nilotic group as the Nandi, Turkana and Karamojo tribes, and the language has affinities with Masai. The dialect is given by Sir H.H. Johnson, in his work *The Uganda Protectorate*, as Elgumi..." (Introduction).

**1958:** [LILLYbm] *An English-Ateso and Ateso-English Vocabulary*, by J.H. Hilders & J.C.D. Lawrance. Nairobi, Kampala, Dar-es-Salaam: The Eagle Press, 1958. Original pale red cloth over boards, lettered in black. Pp. *i-iv v-xv xvi*, 1-58 59-60. First edition. Hendrix 1601. This copy with the ownership signature of the noted Australian linguist A[rthur] Capell, dated 31.8.60. Capell is the author, among many others, of *The New Fijian Dictionary* (1941), *The Changing Status of Melasian Pidgin* (1969), *A Survey of New Guinea Languages* (1969), *Grammar and Vocabulary of the Language of Sonsorol-Tobi* (1969), and the *Futuna-Aniwa Dictionary* (1984).

"Father Hilders spent many years amongst the Iteso and is now near Tororo in Bukedi District, but in an area inhabited by Iteso. Mr. Lawrance, who was for more than

five years District Commissioner, Teso... is Permanent Secretary in the Ministry of Land Tenure in Entebbe" (Foreword, by T.R.F. Cox, Chairman of the Languages Board, Uganda). "We hope that this vocabulary will meet a widespread want. Bishop Kitching's vocabulary [London, 1915], which contains in two sections a total of some 4,700 words, has long been out of print. Father Kiggen has recently published the English-Ateso volume of his dictionary [Mill Hill Mission, 1953], which 'embraces a translation of 18,000 English words and over 12,000 English derivations and English expressions of common usage.' There are no other lexicographical works in Ateso, a language spoken by more than half a million people, and we believe there is a general need for a vocabulary with both English-Ateso and Ateso-English under one cover, of a size between the two works mentioned, and produced at a price which is within the pocket of most Ateso" (Preface by the Authors).

[**TETUN**] Tetum /'tɛtɒm/, also Tetun, is an Austronesian language spoken on the island of Timor. It is spoken in Belu Regency in Indonesian West Timor, and across the border in East Timor, where it is one of the two official languages. In East Timor a creolized form, Tetun Dili, is widely spoken fluently as a second language; without previous contact, Tetum and Tetun Dili are not mutually intelligible. Besides the grammatical simplification involved in creolization, Tetun Dili has been greatly influenced by the vocabulary of Portuguese, the other official language of East Timor (Wiki).

**1889:** [LILLY] *Diccionario de Portuguez-Tétum*, by Apparicio da Silva, P. Sebastião Maria. Macau, Typographia do Seminario, 1889. (1, 1 blank l.), viii, 41 pp., (1 l. errata), 431 pp. 8, quarter cloth, original wrappers pasted on boards; worn, pp. 425-6 loose. Corner torn off blank leaf following t.p., which bears the inscription of Pe. B. [?] Silva, 23-4-98. Not in Zaunmüller. Dictionary of Portuguese and Tetum, the language spoken in Timor. The prologue includes conventions and abbreviations used in the text. The author, a Portuguese missionary at the Real Collegio das Missões Ultramarinas, was director of the seminary in Macau for two years, starting in 1875, and returned there in 1891 before taking a position at the seminary at Timor. Innocencio XIX, 355: without collation. Not in Gomes, *Bibliografia macaense*, which lists the author's *Catecismo*, Macau 1885.

**1906:** [LILLYbm] *Tettum-Hollandsche Woordenlijst met beknopte spraakkunst*, by A. Mathijssen. 's Hage; Batavia: Martin Nijhoff; Albrecht & Co., 1906. Original gray wrappers, lettered in black, laid on near-contemporary stiff paper with unlettered spine. Pp. [139]-145 [list of errata bound in front] 146, [2] I II-XIV, 1 2-138 [2]. First edition. *Verhandelingen van het Bataviaasch Genootschap van kunsten en wetenschappen*, d. 56, 2. stuk. Not in Zaunmüller. Includes Tetun-Dutch, pp. [1]-130, with an appendix of Dutch-Tetun phrases. Mathijssen was a missionary in Fialaran in Dutch Timor. Dutch Timor historically had an area of a little over 8,000 sq. miles.

"Kupan, the chief town of the residency, contains some 8000 inhabitants, of whom 145 are Europeans living in well-built houses, 394 Chinese, and 43 Arabs.... Dutch Timor [also includes] the small adjacent islands, Rotti, Peman, &c., the Savu islands, Sumba or Sandalwood island, the Solor and Allor group of islands and the eastern half of Flores" (*Encyclopedia Britannica*, 13<sup>th</sup> ed.). The first dictionary of the major language of

Timor appeared in 1889 (see above); a far shorter Dutch-Malay-Rotti-Timorese vocabulary had appeared in an academic periodical in 1894 (see under **MALAY**).

**1907:** [LILLYbm] *Diccionario Teto-Português*, by Raphael Das Dores. Lisbon: Imprensa Nacional, 1907. Original cream-colored wrappers, lettered and decorated in black; front wrapper detached. 248 pp. First edition. Not in Zauhmüller Includes Teto-Portuguese (pp. 77-204) and a vocabulary "Teto, Português e Malaio" (pp. 209-247). Portuguese Timor historically included the neighboring isle of Pulo Kambing and had an area of about 7450 sq. miles, with population estimates at the time varying from 300,000 to half a million.

"The natives, still mainly independent of their nominal Dutch and Portuguese rulers, are divided into many hostile tribes, speaking as many as forty distinct Papuan and Malayan languages or dialects. Some are addicted to headhunting, at least during war, and other barbarous practices" (*Encyclopedia Britannica*, 13<sup>th</sup> ed.).

**1984:** [LILLYbm] *Tetun-English Dictionary*, by Cliff Morris. Canberra: The Australian National University, 1984. Original yellow-green wrappers, lettered and decorated in black. Pp. "This dictionary is a welcome addition to the growing body of literature, in English, on Timor. It is also appropriate that the first substantial dictionary to English of any Timorese language should be Tetun, since Tetun has for centuries been an historically influential language throughout the island...Both historical and ethnographic evidence suggests that Tetun was already of great importance at the time of the arrival of the First Portuguese in the 16<sup>th</sup> century...the number of people who speak Tetun as the first language range from 300,000 to 400,000. The fact that Tetun was adapted as a lingua franca in east Timor means, however, that many more Timorese understand Tetun and can use it as a second language. The usefulness of a Tetun-English dictionary is thus unquestionable" (Preface, James J. Fox). "Tetun is spoken over the whole of the island of Timor in varying degrees of expertise and in a number of regional dialects. As a soldier in East Timor during the second world war I learnt Tetun-Los, and it is this dialect of Tetun which forms the basis of this dictionary...The biggest concentration of natural speakers occurs in the central south coast of Timor, from Alas in the west, to Luka in the east" (Introduction). First English dictionary of the major language of Timor.

[**TEWA**] Tewa is a Tanoan language spoken by Pueblo people, mostly in the Rio Grande valley in New Mexico north of Santa Fe, and in Arizona. It is also known as Tano, or (archaic) Téé-wah. The 1980 census counted 1,298 speakers, almost all of whom are bilingual in English. Each pueblo or reservation where it is spoken has a dialect. As of 2012, Tewa is defined as "definitely endangered" in Arizona and "severely endangered" in New Mexico by UNESCO. The written form of the language is not as ubiquitous as in languages such as Cherokee or Navajo, because some Tewa speakers feel that the language should be passed on through the oral tradition. The Tewa language was a spoken language through the 1960s; digital language documentation efforts were underway as of 1995 (Wiki).

Original olive cloth over boards, lettered and decorated in gold. Pp. [2] I-II III-X, I 2-76 [4]. First edition. Bureau of American Ethnology, Bulletin 56. Includes detailed Tewa-English annotated vocabulary of animals, birds, reptiles, insects, etc., pp. 9-68.

"Much of the work hitherto done in obtaining the names of plants and animals has been worthless, because no attempt was made to discover and record with certainty the kind of plants and animals to which the names are applied... The best way certainly is to get the information in the field, so far as possible by showing the Indian informants the animal in its natural environment. Specimens thus identified and discussed should then be scientifically identified and preserved for future reference" (p. 9).

**1916:** [LILLYbm] *Ethnobotany of the Tewa Indians*, by Wilfred William Robbins, John Peabody Harrington & Barbara Freire-Marreco. Washington: Government Printing Office, 1916. Original olive cloth over boards, lettered and decorated in gold. Pp. [2] I-II III-XII, 1-118-- + folding map. First edition. Includes detailed Tewa-English vocabulary of plants and flowers, pp. 8-118.

"Ethnobotany is virtually a new field of research... The ethnobotany of one tribe should be compared with similar studies of other tribes.... Conceptions of plant life differ among different peoples: a particular plant here does not react in the same way upon one people as it does upon another; it has a different name and probably a different usage; while different ideas are held concerning it.... Attempt should ultimately be made to investigate the causes and extent of these variations" (pp. 1-2).

[**THAI**] Thai, also known as Siamese or Central Thai, is the national and official language of Thailand and the native language of the Thai people and the vast majority of Thai Chinese. Thai is a member of the Tai group of the Tai-Kadai language family. Over half of the words in Thai are borrowed from Pali, Sanskrit and Old Khmer. It is a tonal and analytic language. Thai also has a complex orthography and relational markers. Spoken Thai is mutually intelligible with Laotian (Language of Laos; the two languages are written with slightly different scripts, but are linguistically similar).

This copy from the library of the noted linguist Johannes Rahder, with his ownership stamps and a few notations.

Jean-Baptiste Pallegoix, 1805 – 1862, arrived in Bangkok in 1830, and was appointed vicar apostolic of Eastern Siam in 1841. He became close to King Mongkut and was influential in establishing political and commercial relations between Thailand and France. His main claim to fame was in the development of printing in Thailand. He received his first press in 1838, and published his first primer, in romanized Thai, in September that year. A number of tracts and school books were printed in the following years in Thai, Annamese, Cochinese, and Malay, but all in roman characters. Pallegoix

was able to use Thai type acquired from the American Protestant missionaries in Bangkok. Winship, Michael: *Early Thai Printing to 1851*. (Crossroads, Volume 3, Number1).

"Aids to the study of the Siamese language are sparse... Of the available dictionaries, the large one by Pallegoix [Paris, 1854]... is hard to come by, Bradley's (Bangkok, 1873) is written entirely in Siamese and therefore only useful to those who know the language well; the Siamese-English dictionary of E[dward] B. Mitchell (Bangkok, 1892) is useful but incomplete... and the English-Siamese one by McFarland (Bangkok, 1886) is to be used with caution. There is no German-Siamese dictionary available... Given these circumstances, I expect a friendly reception [for this work, which includes] a German-Siamese dictionary of approximately 2500 words... It deals with the colloquial speech of everyday life; the elevated style, the speech of the court and the priests with their vocabulary borrowed from Sanskrit and Pali, requires separate study" (Foreword, tr: BM).

First French-Thai dictionary. Edward B. Mitchell produced a Siamese-English dictionary in Bangkok in 1892. A German-Siamese dictionary was published by F. J. Wershoven in Vienna in that same year (see above).

"The goal of this work is to fill a regrettable lacuna, the absence of any French-Siamese dictionary or lexicon. It is entitled ESSAI DE DICTIONNAIRE because of its imperfections, which are however inevitable in any work that is the first of its genre. The

works that have been of the greatest aid in compiling it have been, without doubt, the DICTIONNAIRE SIAMOIS-FRANÇAIS-ANGLAIS of Mr. Pallegoix..., and the DICTIONARY OF THE SIAMESE LANGUAGE by P. B. Bradley (Bangkok, 1873) [not in Zaubmüller]" (Preface, tr: BM).

"In this volume, an attempt has been made to produce a handy Siamese English Dictionary at a moderate price. Hitherto only two Siamese English Dictionaries have been published: namely the large work of Bishop Pallegoix, and the smaller one of Mitchell, the latter having now been out of print for a considerable time. The present work differs from both of the above in the following particulars: A. The arrangement of the words...B. The scope and compass of the work...While not possessing the wealth of detail of Pallegoix; the compass of the present work is considerably greater than that of Mitchell's.... [etc. ]" (Preface).

The Table of Contents [which is printed in an unfinished state] indicates that a final general vocabulary, English-Thai and Thai-English, may have been intended. The first edition appeared in 1915. This copy with the ink stamp "Bibliotheca John Stokes."

"Nine years have now elapsed since the author's publication of a previous work under the title of "An Elementary Hand-book of the Siamese Language," and with increased experience... he came to the conclusion that from the point of view of the Student, several grave objections could be raised against the said book as a rapid method for the study of the Siamese language. The author therefore decided that as soon as a demand arose for a new edition, it would be better to write an entirely new book, rather than to make a revised edition of the old. The present work is the outcome" (Author's Preface [to the First Edition]).

"Cartwright's Student Manual has proved its value as a textbook to English speaking students of the Siamese language. There is a constant demand for this work, but it has been out of print since 1928. Standardized Siamese spelling which has been introduced recently makes the book out-of-date... I have found it necessary, therefore, to extend the

3rd Part of the book, apart from bringing other Parts up to date, and correct the Siamese spelling" (Preface to the Revised Edition).

"The first edition of the McFarland *Thai-English Dictionary* came from the press in Bangkok just five months before Pearl Harbor. A few copies reached the United States before communication ceased. Since then it has been impossible to secure additional copies for use outside Thailand... To secure this specific need the present edition has been printed.... The page-size of this edition is reduced somewhat, making a handier volume than the original. Otherwise there is no change" (Preface to the Second Edition, Bertha Blount McFarland).

**1983:** [LILLYbm] *E-Saan-Central Thai Dictionary. Revised Edition*, by Sutthiya Sueppha, Karuna Kitkhayan, & Chotima Juengsawat. Thailand: U.S. Peace Corps, [1983]. Original orange wrappers, lettered and decorated in black. Pp. [1-64] (paginated in Thai, pp. [9]-[63]). Revised edition.

"This E-Saan to Central Thai Dictionary is a revised edition of the "Central to E-Saan Thai Dictionary" developed in 1981. The revision was based on the feedback we received from the Peace Corps Volunteers who used the first edition. Both format and content of the first edition have been changed: for one thing, the script is larger. An English column has been added and each entry starts with E-Saan Thai instead of Central Thai. So, on each page, there are four columns: the E-Saan Thai word, the Central Thai equivalent, the English equivalent, and sample usages... Since E-Saan Thai has no written script, the Central Thai alphabet and tone rules have been used to represent E-Saan Thai sounds... Our problems are further complicated by the existence of another tone - 'high falling.' It is close to falling tone but starts at a higher level. So, in E-Saan there are six addition of the English equivalents, this becomes this first English dictionary of E-Saan.

[**THEMNE**] Temne (also Themne, Timne) is a language of the Mel branch of Niger–Congo, spoken in Sierra Leone by about 2 million speakers. One of the country's most widely spoken languages, it is spoken by 30% of the country's population. It also serves as a lingua franca for an additional 1,500,000 people living in areas near the Temne people. It is closely related to the neighboring Kissi language. Temne speakers can also be found in all 12 districts of Sierra Leone. Temne people can be found in a number of other West African countries as well, including Guinea and The Gambia. Some Temnes have also migrated beyond West Africa seeking educational and professional opportunities, especially in Great Britain, the United States, and Egypt. Temnes are mostly scholars, business people, farmers, and coastal fishermen; and most are Muslims (Wiki).

[**TIBETAN, AMDO**] The Amdo language (Tibetan: Wylie: A-mdo skad, Lhasa dialect IPA: [ámtokeʔ]; also called Am kā) is the Tibetic language spoken by the majority of Amdo Tibetans, mainly in Qinghai and some parts of Sichuan (Ngawa Tibetan and Qiang Autonomous Prefecture) and Gansu (Gannan Tibetan Autonomous Prefecture). Amdo is one of the four main spoken Tibetic languages, the other three being Central Tibetan, Khams Tibetan, and Ladakhi. These four related languages share a common written script but their spoken pronunciations, vocabularies and grammars are different (Wiki).

Ethnologue: adx. Alternate Names: Amdo, Anduo, Ngambo, Panang.

[**TIBETAN, CENTRAL**] Central Tibetan, also known as Dbus a.k.a. Ü or Ü-Tsang, is the most widely spoken Tibetic language and the basis of Standard Tibetan. Dbus and Ü are forms of the same name. Dbus is a transliteration of the name in Tibetan script, whereas Ü is the pronunciation of the same in Lhasa dialect, [wyʼʔ] (or [yʼʔ]). That is, in Tibetan, the name is spelled Dbus and pronounced Ü. All of these names are frequently applied specifically to the prestige dialect of Lhasa. There are many mutually intelligible Central Tibetan dialects besides that of Lhasa, with particular diversity along the border and in Nepal: Limi (Limirong), Mugum, Dolpo (Dolkha), Mustang (Lowa, Lokä), Humla, Nubri, Lhomi, Dhrogpai Gola, Walungchung Gola (Walungge/Halungge), Tseku, Basum. Ethnologue reports that Walungge is highly intelligible with Thudam, Glottolog that Thudam is not a distinct variety. Tournadre (2013) classifies Tseku with Khams (Wiki). Ethnologue: bod. Alternate Names: Bhotia, Dbus, Dbusgtsang, Phoke, Tibetan, U, Wei, Weizang, Zang.

"This work represents a new and thoroughly revised edition of a Tibetan-German dictionary, which appeared in a lithographed form between the years 1871-1876. During a residence, which commenced in 1857 and extended over a number of years, on the borders of Tibet and among Tibetan tribes, I and my colleagues gathered the materials for this Dictionary. We had to take primarily into account the needs of missionaries entering upon new regions.... The chief motive of all our exertions lay always in the desire to facilitate and to hasten the spread of the Christian religion and of Christian civilization, among the millions of Buddhists, who inhabit Central Asia, and who speak and read in Tibetan dialect. A yet more definite object influenced my own personal linguistic researches, in as much as I had undertaken to make preparations for the translation of the Holy Scriptures into the Tibetan speech" (Preface).

**1903:** [LILLY] *Tibetan Manual,* compiled by Vincent C. Henderson, Chinese Imperial Maritime Customs. Revised by Edward Amundsen, British and Foreign Bible Society. Calcutta: Printed at the Baptist Mission Press and published by the Inspector General of Chinese Imperial Maritime Customs, 1903. [6] vi 118, 129. Includes thematically-arranged English-Tibetan vocabulary lists, pp. [45]-118, and a English-Tibetan vocabulary, pp. [1]-129. This copy with ownership signature of Vincent Nesfield on the free end-paper, and two pages of loosely-inserted notes in pencil and a page of manuscript in Tibetan.. The copy is annotated throughout with notes in pencil.

"Throughout my study of Tibetan, I felt greatly the want of an English-Tibetan vocabulary. I have carefully compiled this vocabulary with the object of saving the student much of the devious and laborious search after words which I experienced... My thanks are due to many Tibetans who patiently taught me under difficulties, and particularly to Wang Chug Tsering, Tibetan clerk in the Custom House, Yatung, Tibet, who assisted me greatly in my work. The whole work has been thoroughly revised by Mr. Edward Amundsen of the British and Foreign Bible Society—a gentleman of great linguistic attainments, probably the most erudite Tibetan scholar in India" (Preface, Vincent C. Henderson).

"The Vocabulary, forming Part Two, has occupied the author's attention most and gives to the book its special value" (Reviser's Preface, Edward Amundsen).

**1919:** [LILLYbm] *An English-Tibetan Dictionary, containing a Vocabulary oapproximately 20,000 Words with their Tibetan Equivalent*s, by Lama Dawsamdub Kazi [Zla-ba Bsam'Grub]. Calcutta: Baptist Mission Press, published by the University, 1919. Original dark-brown cloth over boards, decorated in blind, and lettered in gold. 990 pp. First edition. Zaunmüller, col. 378. This is the first substantial English-Tibetan dictionary, which draws upon previous Tibetan-English dictionaries by Csoma de Körös (1834; see above), Jäschke (1881; see above) and Das (1902). In 1920, Bell published an English-Tibetan colloquial dictionary, which has been described as the "first practical dictionary of the spoken language to appear in English" by Stuart Buck (see below), who refers to Kazi's dictionary, which preceded it by a year, as "for students of the written rather than the spoken language... In most instances the Tibetan 'definition' is an explanation in Tibetan of the English word or phrase rather than an equivalent meaning" (from Buck's Introduction to his own dictionary of 1969).

Second Edition. Calcutta: The Bengal Secretariat Book Depot, Writers' Buildings, 1920. Price Rs. 4. Pp. *i-iii iv v vi-viii ix-xi xii-xiv xv xvi-xxxvi / 2-562*. 18.3 cm. Original gray-green cloth over boards, lettered and illustrated in black. "Calcutta: Baptist Mission Press, 41, Lower Circular Road. 1920." on verso of title page. Includes English-Tibetan, pp. [1]-562. Reprints Preface to the First Edition, dated 1905.

"In the first edition this dictionary was published as the second part of a 'Manual of Colloquial Tibetan,' the first part consisting of a Grammar of Colloquial Tibetan. In this second edition both parts have not only been revised, but have also been considerably enlarged... Some two thousand fresh words have been added in this edition, which now contains between eleven and twelve thousand words.... [A] second edition was called for owing to the first edition being sold out—a rare occurrence among books on Tibet" (Preface to the Second Edition).

**1956:** [LILLYbm] *Dictionnaire français-tibétain. Tibet oriental*, by [Pierre Philippe Giraudeau] [1850- ] & Francis Goré. Paris: Adrien-Maisonneuve, 1956. Original full red leather ober boards, lettered in gold. Pp. [8]1 2-310, <sup>2</sup>1 2-24 25-26. First edition. Zaunmüller, col. 377. Includes French-Tibetan, pp. [1]-310, and a Tibetan-French glossary of historical and geographical names, pp. <sup>2</sup>[1]-24. Second copy: LILLYbm, bound in maroon cloth over boards, lettered in gold, otherwise identical.

"This first French-Tibetan dictionary is the fruit of a long stay in the Chinese-Tibetan frontier and the collaboration of Monsignor Giraudeau and Father Goré. Mgr. Giraudeau apostolic vicar to the Tibet Mission, spent 63 years in the Tibetan area, and is well known for his works on the Tibetan language, ... having collaborated on the Tibetan-French dictionary...published in 1890, and ...the Latin-Tibetan dictionary. In the course of these works he collected the information published here. Father Goré spent twelve years in the Chinese region of the Tibet Mission.... He compared his linguistic notes with dictionaries, grammars and manuals that had appeared up to that time in English, French, Latin and Chinese... There was a thought of publishing his work in 1939, by circumstances prevented this. He was expelled from the area in 1952 by the

Chinese communists. Gathering his papers together in Hong Kong, he returned to Europe and prepared this work, adding an index of the principal geographic, Buddhist and historical terms not found in the lexicon itself. Thanks to the collaboration of Fathers Le Corre and Pecoraro who studied Tibetan under his guidance, it has been possible to publish this first of two volumes: the French-Tibetan dictionary of 310 pages in two columns and the Method of the Tibetan language (style and language) of 200 pages, which will follow soon" (Prefatory note, tr: BM).

"The present little book is a response to the wishes of many [Swiss] parents for a language teaching aid for their adopted Tibetan children. The intention was to preserve or develop a limited vocabulary for children. This little book allows the parents to learn the correct pronunciation and how the words are written. Each German word is followed by an indication of its pronunciation in Tibetan, the printed Tibetan form, and the written Tibetan" (Foreword, tr: BM). There are estimated to be more than 200 Tibetan speakers in Switzerland.

This East German dictionary was printed in Russia and is based largely on material published in China.

"Both the form and the content of the Tibetan language has been substantially transformed in the new Tibet of post-1951. Its task was and remains to mobilize the *entire* Tibetan people for their great constructive work... Since the appearance of [the earlier classical Tibetan dictionaries] the Tibetan language has continued to develop, and its vocabulary has been substantially enriched, so that they are only of limited use in translating texts in modern languages. The present short *Tibetan-German Dictionary* of the modern language is intended to fill this significant gap and to offer the user an aid in reading the new Tibetan literature" (Introduction, tr: BM).

"Since the Red Chinese conquest of Tibet, a flood of new political, administrative, industrial, and technical terms has appeared in Tibetan language newspapers and periodicals published by the Communist Party... The primary purpose of the present dictionary is to provide full and accurate definitions of the vocabulary used in current publications in the Tibetan language, especially those appearing in Communist China. This does not mean, however, that either the colloquial language or the special vocabulary of the Tibetan classics will be ignored... On the other hand thousands of terms listed in the older dictionaries and glossaries have been omitted as being too obscure or impractical for our purposes" (Introduction).

"Thus there is the pronounced need for a comprehensive, standard English-Tibetan dictionary that would enable its readers to use correctly, in their speech and writing, the thousands of instances of modern terminology found in the English language. Unfortunately, dictionaries of such description are sadly lacking.... We find that today there is a vast difference between what is spoken and what is written in Tibetan. Moreover, standard, accepted phrases and words for newly invented and discovered objects, phenomena and services are conspicuously absent" (preface). "I am deeply indebted to H.H. the Fourteenth Dalai Lama for his peerless advice, encouragement and sacred blessings, without which this dictionary would never have seen the light of day... *Concluding Prayer* / Born as a Tibetan in the land of Snows, / This body and mind grew up / Cultivating the internal and external culture; In return thereof, / I give this New Light dictionary. // With the moon radiance emerging from this work, / May the desires of all me be assuaged, / And, dispelling the heat of unsatisfactoriness, ' May shade be given to all sentient beings." [**TIBETO-BURMAN LANGUAGES: POLYGLOT**] The Tibeto-Burman languages are the non-Sinitic members of the Sino-Tibetan language family, over 400 of which are spoken throughout the highlands of Southeast Asia as well as certain parts of East Asia and South Asia. The name derives from the most widely spoken of these languages, namely Burmese (over 32 million speakers) and the Tibetic languages (over 8 million). These languages also have extensive literary traditions, dating from the 12th and 7th centuries respectively. Most of the other languages are spoken by much smaller communities, and many of them have not been described in detail. Some taxonomies divide Sino-Tibetan into Sinitic and Tibeto-Burman branches (e.g. Benedict, Matisoff). However, other scholars deny that Tibeto-Burman comprises a monophyletic group. Van Driem argues that the Sino-Tibetan family should be called "Tibeto-Burman", but this usage has not been widely adopted. Others exclude a relationship with Chinese altogether (e.g. Beckwith, R. A. Miller) (Wiki).

[**TICUNA**] Ticuna, or Tikuna, is a language spoken by approximately 40,000 people in Brazil, Peru, and Colombia. It is the native language of the Ticuna people. Ticuna is generally classified as a language isolate, but may be related to the extinct Yuri language. (See Ticuna-Yuri.) It is a tonal language, and therefore the meaning of words with the same phonemes can vary greatly simply by changing the tone used to pronounce them. Ticuna is also known as Magta, Maguta, Tucuna/Tukuna, and Tukna (Wiki).

[**TIDORE**] Tidore of eastern Indonesia is a language centered on the island of Tidore but also spoken in neighboring Halmahera. A Papuan language, it is unlike most languages in Indonesia which belong to the Austronesian language family. It, and the similar Ternate language, appear to be related to languages of the Bird's Head peninsula in Papua. It is closely related to Ternate (Wiki).

[**TIGRÉ**] Tigre (Ge'ez: ተግረ tigre or ተግራ tigrē), better known in Eritrea by its autonym Tigrayit ተግራይት, and also known by speakers in Sudan as Xasa (Arabic: الخصابية ḥāṣiyah), is an Afroasiatic language spoken in Northeast Africa. It belongs to the North Ethiopic subdivision of the family's South Semitic branch and is primarily spoken by the Tigre people in Eritrea. Along with Tigrinya, it is believed to be the most closely related living language to Ge'ez language, which is still in use as the liturgical language of the Ethiopian Orthodox Tewahedo Church and Eritrean Orthodox Tewahedo Church. As of 1997, Tigre was spoken by approximately 800,000 Tigre people in Eritrea. The Tigre mainly inhabit western Eritrea, though they also reside in the northern highlands of Eritrea and its extension into the adjacent part of Sudan, as well as Eritrea's Red Sea coast north of Zula. The Tigre people are not to be confused with their neighbors to the south, the Tigrayans of Ethiopia and Biher Tigrinya in Eritrea. The northern Ethiopian province which is now named the Tigray Region is a territory of the Tigrayans. Tigrinya is also derived from the parent Ge'ez tongue, but is quite distinct from Tigre despite the similarity in name (Wiki).

Other than the glossary, the material differs substantially from the German edition above. Second copy: LILLY, later blue quarter-linen and blue paper over boards, with paper label lettered in ink.

The preface gives the history of the publication of the work in detail, pointing out that it was the first study of the Tigre language, "of which at that time nothing was known in Europe," although during the six year delay in publication, other vocabularies of the language appeared in French (Munziger, 1865) and Latin (Dillman, 1865). The vocabulary itself was gathered by Beurmann who, before it could be published, was "finally murdered by one of those, whose gradual civilization was the primary object of all his exertions... it is uncertain whether by a direct order of the Sultan of Wadai or by the private cruelty of an avaricious Governor. His noble zeal [had] brought him a second time into the interior of Africa and here he fell, one more German sacrifice for science and civilization" (from a sketch of the Beurmann's life by Merx, p. [1]).

planned). Hendrix 1613. The dictionary is tri-lingual, Tigre-German-English. First true dictionary of the language.

"The authors' primary goal in compiling this Tigre dictionary was to fill a gap in the series of previous lexica of Semitic languages; a gap that was even more regrettable due to the fact that this language is just as important as any other African-Semitic language for general and comparative Semitic Studies... The English translations were added to the German to render the dictionary of this still-current language useful to as wide a circle as possible. The fact that the Tigre words are not transcribed, but given in Ethiopian script, however, indicates in itself that the primary purpose of the dictionary is an academic one" (tr: BM). (Preface).

[**TIGRIGNA**] Tigrinya (properly Tigrigna; /tɪ'gri:njə/[3] (ትግርኛ təgrāñña) is an Afroasiatic language of the Semitic branch. It is mainly spoken in Eritrea and northern Ethiopia in the Horn of Africa, with around 6,915,000 total speakers. Tigrinya speakers in Ethiopia (known as Tigrayans; Tigrawot; feminine Tigrāweyti, male Tigraway, plural Tegarū) number around 4,320,000 individuals, and are centered in the northern Tigray Region. The Tigrinya speakers in Eritrea (Tigrinyas) total roughly 2,540,000, and are concentrated in the southern and central areas. Tigrinya is also spoken by emigrants from these regions, including some Beta Israel. Tigrinya should not be confused with the related Tigre language. The latter is spoken by the Tigre people, who inhabit the lowland regions of Eritrea to the north and west of the Tigrinya speech area.

Includes Tikopia-English, pp. 1-603, appendix of loan words, pp. 604-612, and bibliography: p. xxi-xiii. Includes discussion of "Antecedents of the Dictionary," pp. iv-vi. ). This is the first dictionary of the language, preceded by a brief vocabulary or two, and a 3,000-4,000 word list in the *Journal of the Polynesian Society* (1926-27) edited by Herbert Williams (see above).

"I have included in this dictionary a considerable amount of traditional material...Some of the words refer to customs which Tikopia no longer practice - such as the ritual of the *kava*...Not all modern Tikopia may want to know about these words and ideas from the past, but the evidence should be available to them...It may well be that in some future generation [they may] with their richness of cultural association and subtle figurative symbolic meaning...come to be prized as part of the whole Tikopia cultural achievement" (Introduction).

"This Tikopia word-book has taken more than ten years to produce, but its origins go back more than fifty years, to my first field expedition of 1928-29...At that time the culture of Tikopia had received only very fleeting study...I took part in a great range of Tikopia activities, from just sitting around in houses, talking and eating, to dancing, fishing, attending initiations, marriages, funerals and religious rites...I tried to get a selection of all kinds of utterance, from formulae recited as a religious offering was made to instructions shouted about a package of food or a canoe, or an angry expostulation when someone made a wrong move..." [**TILLAMOOK**] Tillamook is an extinct Salishan language, formerly spoken by the Tillamook people in northwestern Oregon, United States. The last fluent speaker was Minnie Scovell who died in 1972. [**TIMBISHA**] Timbisha (Tümpisa; also called Panamint or Koso) is the language of the Native American people who have inhabited the region in and around Death Valley, California and the southern Owens Valley since late prehistoric times. There are a few elderly individuals who can speak the language in California and Nevada, but none are monolingual and all use English regularly in their daily lives. Until the last decade of the twentieth century, the people called themselves and their language "Shoshone". The tribe then achieved Federal recognition under the name Death Valley Timbisha Shoshone Band of California. This is an Anglicized spelling of the native name of Death Valley, tümpisa, pronounced [timbiʃa], which means "rock paint" and refers to the rich sources of red ochre in the valley. Timbisha is also the language of the so-called "Shoshone" groups at Bishop, Big Pine, Darwin, Independence, and Lone Pine communities in California and the Beatty community in Nevada. It was also the language spoken at the former Indian Ranch reservation in Panamint Valley (Wiki).

Ethnologue: par. Alternate Names: Coso, Koso, Koso Shoshone, Panamint, Panamint Shoshone, Tümpisa Shoshoni.

**1989:** [LILLYbm] *Tümpisa (Panamint) Shoshone Dictionary*, by Jon P. Dayley. Berkeley: University of California Press, [1989]. Includes Tümpisa Shoshone-English dictionary, pp. 1-416, and an English-Tümpisa Shoshone Glossary, pp. 419-513. Bibliography, pp. 515-516.

"In aboriginal times and even well into this century, Panamint was spoken by small bands of people living in southeastern California and extreme southwestern Nevada in the valleys and mountain ranges east of the Sierra Nevada...Panamint is closely related to Shoshone proper, spoken immediately to the northeast of it, and to Comanche, spoken now in Oklahoma but formerly in the central and southern Great Plains. Together these three closely related languages comprise the Central Numic branch of the Numic family of the Uto-Aztecan stock of American Indian languages...No one really questions that Panamint and Shoshone are distinct languages...In this dictionary I have adopted the term Tümpisa Shoshone to refer to the variety of the language spoken by the people native to Death Valley, California, and vicinity. *Tümpisa*" and [other] variants...are well-known names for Death Valley in the language... There never were many Tümpisa Shoshone, at most never more than a few hundred even in aboriginal times... When I worked in the area in the early 1970s, only some 35-40 people spoke the language fluently and used it on a day-to-day basis. Today there are fewer than half a dozen people who speak the language fluently, and they are all in their 80s...I present the lexical material in this dictionary, then, knowing that it is incomplete, but also knowing that it is the most there is, perhaps the most there will ever be in monograph form." This is the first dictionary of the language.

[**TIMOTE**] Timote, also known as Cuica or Timote–Cuica, is the language of the Timote–Cuica state in the Venezuelan Andes, around the present city of Mérida and south of Lake Maracaibo. The language is reported to have gone extinct in the early to mid 20th century. However, in 1977 it was reported that the indigenous village of Mutús, in the heart of the old Timote state, still spoke an indigenous language, which would presumably be Timote. The name is apparently Timote, as 'Timote' itself derives from *ti-moti* 'Mutú speakers', and *mutú* or *mukú* is a common toponym in the region. This lead had not been followed up as of Adelaar (2004) (Wiki).

Ethnologue no longer lists this language (previously cited as Mutús: muf). It was removed between the 14<sup>th</sup> and 15<sup>th</sup> editions, since "no solid evidence can be found that the named language ever existed."

**1927:** [LILLYbm] "La famille linguistique Timote (Venezuela)," by P. Rivet, in: *International Journal of American Linguistics*, New York, 4, no. 2-4 (January 1927), pp. 137-167. Original gray wrappers, lettered in black. Includes French-Timote/Cuica vocabulary, pp. 151-167, with bibliography, p. 167. First substantial published vocabulary of this language, which is now extinct, or possibly never existed.

"It is to be hoped that a thorough and serious study of Timote-Cuica will be undertaken; there is some urgency, since the language is rapidly disappearing, and no doubt in a few years it will be too late. This would be a work of ethnographic salvaging

that should impose itself upon the patriotism of learned Venezuelans. If the present work has no other result than to stimulate such a study, it will not have been in vain".

[**TIMUCUA**] Timucua is a language isolate formerly spoken in northern and central Florida and southern Georgia by the Timucua people. Timucua was the primary language used in the area at the time of Spanish colonization in Florida. Linguistic and archaeological studies suggest that it may have been spoken from around 2000 BC. Most of what is known of the language comes from the works of Father Francisco Pareja, a Franciscan missionary who came to St. Augustine in 1595. During his 31 years of service to the Timucua, he developed a writing system for the language, the first for an indigenous language of the Americas. He published several Spanish-Timucua catechisms, as well as a grammar of the Timucua language, from 1612-1627. His 1612 work was the first to be published in an indigenous language in the Americas. Including his six surviving works, only nine primary sources of information about the Timucua language survive, including two catechisms written in Timucua and Spanish by Father Gregorio de Movilla in 1635, and a Spanish-translated Timucuan letter to the Spanish Crown dated 1688. In 1763 the British took over Florida from Spain following the Seven Years' War, and most Spanish colonists and mission Indians, including the few remaining Timucua speakers, left for Cuba, near Havana. The language group is now extinct (Wiki).

Ethnologue does not include this extinct language.

**1880:** [LILLYbm] *The Timucua language*, by Albert S[amuel] Gatschet [1832-1907]. [Philadelphia], 1880. Three parts. Caption title. With contemporary gray wrappers on Parts II and III, lettered in ink by hand. Separate publication from the *Proceedings of the American philosophical society*, v. 17, p. 490-504; v. 18, p. 465-502; excepting the first article, which is reprinted with new pagination from v. 16, p. 625-642. Part I "read before the American Philosophical Society, April 6, 1877"; Part II "read before the American Philosophical Society, April 5<sup>th</sup>, 1878, as a sequel to the article read April 6<sup>th</sup>, 1877"; Part III "read before the American Philosophical Society, February 20, 1880, as a third sequel to the articles on this subject read April 6, 1877, and April 5, 1878." Includes Timucua-English "words and sentences", pp. 14-17 (Part I), 503-504 (Part II), and 498-502 (Part III). This set from the Minnesota Historical Society with their blind stamp on the wrappers of Parts II and III. First published vocabulary of Timucua.

"The science of linguistics... is of very recent date....To similar researches I intend to furnish a small contribution by publishing some notices of the Timucua language, which is perhaps that idiom spoken within the present boundary of the Union in which the oldest writings of some extent have been published. As a nation, the Floridian Timucuas are now extinct, but their idiom is preserved in a shape which promises the possibility of total reconstruction" (p. [1]).

**1890:** [LILLYbm] *Vocabulaire Timucua*, by Raoul de La Grasserie [1839-1914]. [Orleans: Georges Jacob, [1890]. Contemporary unprinted gray wrappers. Pp. 1 2-16. First separate publication, reprinted from the *Revue de linguistique*. Not in Zaunmüller. Two accompanying parts were published in the same periodical and separately published as well, "Textes en langue Timucua, avec traduction analytique," by Albert Gatschet and Raoul de la Grasserie, and "Esquisse d'une grammaire du timucua, langue de la Floride," by Raoul de la Grasserie (Paris: J. Maisonneuve, 1890). The Timucua-French vocabulary, published here separately, pp. [1]-16. This is the first published vocabulary of French and Timucua.

**1993:** [LILLYbm] *A Grammar and Dictionary of the Timucua Language*, by Julian Granberry. Tuscaloosa, Alabama: University of Alabama Press, 1993. Original stiff tan and white wrappers, lettered and decorated in black and white. 292 pp. Third edition. The first and second editions were published by the author in Horseshoe Beach, Florida in 1986 and 1989 respectively. This dictionary is based on earlier work by John Swanton of the Smithsonian Institution's Bureau of American Ethnology, at his request. This is the first dictionary of this extinct language.

"Sixty some years after its inception Swanton's Timucua dictionary is at last something of a reality... The Timucua language was spoken from an indeterminate position on the Georgia coast...south through north and central Florida to the Daytona Beach region...Timucua was the primary native language in this large area at the time of the arrival of the Spanish and French in the late 1500's...It remained so until the end of the First Spanish Period in 1763, when the remnant Timucua speakers, heavily Christianized and acculturated to European lifeways, were moved to Cuba...Ultimately these refugees merged with the general population...Some Tawasa speakers survived in the early 1770's.. but they too soon disappeared... There were eleven Timucua dialects [including Taws]...The present study deals with the Mocama dialect only, inasmuch as this was the dialect with which Pareja and Movilla [the 17<sup>th</sup> century sources of information on the language] were intimately familiar and in which they wrote their religious tracts."

[**TIPPERA**] The Borok language, Kók Borok (Kókborok) or Kak-Borak, also known as Tripuri, is any of the native languages of the Tripuri people of the Indian state of Tripura and neighboring areas of Bangladesh. The word Kók Borok is a compound of kók "language" and borok "people", which is used specifically for the Tripuri people. Kokborok is a Sino-Tibetan language family of East Asia and South East Asia. It is closely related to the Dimasa language of neighbouring of Assam. The Garo language is also a related language as spoken in neighboring Bangladesh and Meghalaya. Kókborok is not a single language, but a collective name for the several languages and dialects spoken in Tripura. Ethnologue lists Usoi (Kau Brung), Riang (Polong-O), and Khagrachari ("Tippera") as separate languages; Mukchak (Barbakpur), though not listed,

is also distinct, and the language of many Borok clans has not been investigated. The greatest variety is within Khagrachari, though speakers of different Khagrachari varieties can "often" understand each other. Khagrachari literature is being produced in the Naitong and Dendak varieties. Kokborok is closely related to language of Dimasa Kacharies of Assam (Wiki).

Titan-English Glossary, pp. 157-189, English-Titan Finderlist, pp. 191-209. Includes bibliographical references (p. 457-461) and index.

"This book was written in order to make more usable the valuable data compiled by Po Minis and the New Britain missionary P. Josef Meier for the 'Manus/ Moanus' language (now usually called 'Titan'). Meier published seventy-five texts in this language in the journal *Anthropos* between 1906 and 1909 (with an addendum in 1912). The corpus is about 25,000 words. The stories contain brief information about the speakers and are glossed word-for-word in German (and occasionally in Latin when the topic of discussion was delicate). He provided no free translations. Meier also compiled a brief wordlist of about a hundred items and a short sketch of the language. After working initially only on the Meier materials, I was able to gain access to the unpublished Manus fieldnotes of Reo Fortune (1928) and Theodore Schwartz (1953–1954); they constitute a considerable set of resources in their own right.... This book is divided into three sections. This, the first, is the sketch grammar, based entirely on the texts collected by Meier and published by him in *Anthropos*. Patricia Hamel's (1994) *Grammar and Lexicon of Loniu: Papua New Guinea* has been very helpful as a guide to interpreting ambiguous data. Part Two is a wordlist compiled from the texts, with an English-Titan reversal" (Introduction).

[TIV] The Tiv language is spoken by over ten million people in Nigeria, with some speakers in Cameroon. Most Nigerian Tiv speakers are found in Benue State of Nigeria. The language is also widely spoken in the Nigerian States of Plateau, Taraba, Nasarawa, Cross River Kaduna, Lagos, Adamawa, Oyo as well as the FCT Abuja. It is part of the Southern Bantoid Tivoid family, a branch of Benue–Congo and ultimately of the Niger–Congo family. The Tiv people have a tradition that is arranged in order of chiefs: 1st class chief (Tor Tiv) 2nd class chief (Ter) which is normally in charge of each local government traditional council. They also have 3rd class chiefs (Tyoor) in charge of Districts and Kindred Heads (Mbateregh) they also have Ator a Ukpande (Tax Collectors) they can also be called village heads (Wiki).

The subsequent decision to expand the work involved the differentiation of meanings under main entries, as well as the addition of many words as found largely in *A Dictionary of the Tiv Language* by R. C. Abraham, London, 1940... This edition is provisional. Please make comments, corrections, and additions as necessary, in order to make a later edition as nearly complete and free from error as possible."

[**TIWA, NORTHERN**] The Taos dialect of the Northern Tiwa language is spoken in Taos Pueblo, New Mexico. In data collected in 1935 and 1937, George L. Trager (1946) notes that Taos was spoken by all members of the Taos Pueblo community. Additionally, most speakers were bilingual in either Spanish or English: speakers over 50 years of age were fluent in Spanish, adult speakers younger than 50 spoke Spanish and English, children around 5 years old could speak English but not Spanish—generally a decrease in age correlated with a decrease in Spanish fluency and an increase in English fluency. Pre-school children and a few very old women were monolingual Taos speakers. A more recent report by Gomez (2003) notes that the language "until a few years ago remained viable only in age groups of thirty and older", a sign that Taos is being affected by language endangerment pressures. Nonetheless, it is one of 46 languages in North America that are being spoken by significant numbers of children as of 1995 (Goddard 1996). The most recent estimate is from 1980 with about 800 native speakers out of 1600 ethnic population (50% of the population). Taos speakers have historically been reluctant to provide linguists with language data to work with and have preferred to keep their language secret from outsiders. G. Trager had to work with his consultants in private and keep their identities in confidence. The tendency for secrecy is a continuing general Pueblo reaction starting in the 17th century in large part due to the oppressive persecution (including public executions and torture) of Pueblo religious practices by the colonial Spanish. The Taos community has been particularly guarded about revealing their language (and culture) to outsiders when compared with other eastern pueblos in New Mexico. Due to secrecy practices, the details of language preservation are not known outside of the community (Wiki).

**1910:** [LILLYbm] *An Introductory Paper of the Tiwa Language, Dialect of Taos, New Mexico*, by John P[eabody] Harrington. [Washington]: Archaeological Institute of America, 1910. Original gray wrappers, lettered and decorated in black. Pp. 11-48 [2]. First edition. Papers of the School of American Archaeology, No. 14. "Reprinted from the *American Anthropologist*, Vol. 12, No. 1, Jan.-Mar., 1910." Tiwa-English, pp. 42-48. This is the earliest printed vocabulary of Northern Tiwa.

"No fact better illustrates the present fragmentary condition of our knowledge of American aboriginal languages than that the tongues of the Pueblo Indians of the southwestern United States have until now remained uninvestigated.... The dialects of Sandia, Isleta, and Isleta del Sur have for three centuries been known to the Mexican population of the region by the name Tigua, obscure in origin. A more continental spelling is Tiwa.... Inasmuch as Tiwa is apparently the most archaic of the Tanoan group...an outline of the language is here presented, the dialect of Taos having been chosen. The Taos, as is usual, consider themselves superior to all other Indians. They have infinite disdain for their southern neighbors, the Tewa, who are regarded as having perverted customs and as speaking a degenerate form of the Taos language. They pride themselves especially on occupying the highest and most northerly of all the Pueblo villages, and the tradition that the Pueblo Indians migrated originally from the north... seems to them sufficient proof that they are the most pristine and uncorrupted of Pueblo villagers."

[**TIWA, SOUTHERN**] The Southern Tiwa language is a Tanoan language spoken at Sandia Pueblo and Isleta Pueblo in New Mexico and Ysleta del Sur in Texas. Southern Tiwa belongs to the Tiwa sub-grouping of the Kiowa–Tanoan language family. It is closely related to the more northerly Picurís (spoken at Picuris Pueblo) and Taos (spoken at Taos Pueblo). Trager stated that Southern Tiwa speakers were able to understand Taos and Picurís, although Taos and Picurís speakers could not understand Southern Tiwa very easily. Harrington (1910) observed that an Isleta person (Southern Tiwa) communicated in "Mexican jargon" with Taos speakers as Taos and Southern Tiwa were not mutually intelligible (Wiki).

[**TIWI**] Tiwi /'ti:wi/ is an Australian Aboriginal language spoken on the Tiwi Islands, within sight of the coast of northern Australia. It is one of about 10% of Australian languages still being learned by children. Traditional Tiwi, spoken by people over the age of fifty by 2005, is a polysynthetic language. However, this grammatical complexity has been lost among younger generations. Tiwi has around one hundred nominals that can be incorporated into verbs, most of them quite different from the corresponding free forms. Unlike other Australian languages, which were once lumped together in a single language family, Tiwi has long been recognized as a language isolate (Wiki).

[**TLAPANEC**] Tlapanec /'tlæpənək/ is an indigenous Mexican language spoken by more than 98,000 Tlapanec people in the state of Guerrero. Like other Oto-Manguean languages, it is tonal and has complex inflectional morphology. The ethnic group themselves refer to their ethnic identity and language as Me'phaa [meʔpʰaː] [as does Ethnologue]. Before much information was known about it, Tlapanec (sometimes written "Tlappanec" in earlier publications) was either considered unclassified or linked to the controversial Hokan language family. It is now definitively considered part of the Oto-Manguean language family, of which it forms its own branch along with the extinct and very closely related Subtiaba language of Nicaragua. Me'phaa people temporarily move to other locations, including Mexico City, Morelos and various locations in the United States, for reasons of work.... Native speakers and the Instituto Nacional de Lenguas Indígenas of the Mexican government, identify eight or nine varieties, which have been given official status: Acatepec, Azoyú, Malinaltepec, Tlacoapa, Nancintla, Teocuitlapa, Zapotitlán Tablas (with Huitzapula sometimes considered distinct), Zilacayotitlán (Wiki).

Ethnologue distinguishes four Tlapanec languages: 1) Me'phaa, Acatepec [tpx]; 2) Me'phaa, Azoyú [tpc]; 3) Me'phaa, Malinaltepec [tcf]; 4) Me'phaa, Tlacoapa [tpl].

[**TLINGIT**] The Tlingit language (English: /'klɪŋkɪt/, /-ɡɪt/; Tlingit: Lingít [lɪŋkít]) is spoken by the Tlingit people of Southeast Alaska and Western Canada. It is a branch of the Na-Dené language family. Extensive effort is being put into revitalization programs in Southeast Alaska to revive and preserve the Tlingit language and its culture. Russian Orthodox missionaries were the first to develop a written version of Tlingit, using the Cyrillic script to record and translate it, when the Russian Empire had contact with Alaska and the coast of North America down to Sonoma County, California. Later, American missionaries developed a written version of the language in the Latin alphabet (Wiki).

Original brown paper wrappers, badly chipped and very brittle, rear wrapper detached, ms. title on front. Pp. [2] [205]-247 248. First edition. "From the Memoirs of the American Academy." Includes English-Tobi vocabulary, pp. 235-242, and English-Tobi, pp. 242-247. This copy with the ownership signature of A[rnold] Guyot in ink in upper right-hand corner of front wrapper and again on recto of initial blank leaf. Guyot was a Swiss, later American, geographer and educator. His many works included *The earth and man: lectures on comparative physical geography, in its relation to the history of mankind* (Boston, 1849, reprinted throughout the nineteenth century) and *Creation; or, The Biblical cosmogony in the light of modern science* (Edinburgh, 1883). First published vocabulary of Tobian.

"The vocabulary accompanying this communication derives its principal value from the circumstance of its being the only one, which has been yet collected, of the inhabitants of these secluded islanders. As, however, a long time will probably elapse before we shall have the means of obtaining any addition information of this dialect, or of the wretchedly destitute and inconsiderable tribe of people who inhabit this little island, it will be of some utility... to preserve this as one of the specimens of human speech,--as one fact in the history of the human race" (p. 206).

"First separate edition of an important monograph on the ethnology and linguistics of Tobi in the Caroline Islands (south of Palau). Pickering got much of his information from Horace Holden's *Narrative of the shipwreck of the American whaler, Mentor*, published in 1836. There are references as well to Horsborough's *India Directory* and to the *Narrative of the U.S. Exploring Expedition*. ...John Pickering [President of the American Academy], eldest son of American statesman Timothy Pickering, was an important philologist, who did important work on American Indian and Pacific languages. See Appleton's *Cyclopaedia of American Biography* V. 3" (bookseller's description: Edward J. Lefkowitz).

[**TODA**] Toda is a Dravidian language noted for its many fricatives and trills. It is spoken by the Toda people, a population of about one thousand who live in the Nilgiri Hills of southern India. The Toda language may have originated from Old Kannada (Wiki).

Ethnologue: tcx. Alternate Names: Todi, Tuda.

**1832:** [LILLY] *A description of a singular aboriginal race inhabiting the summit of te Neilgherry Hills, or Blue Mountains of Coimbatore, in the southern peninsula of India*, by Henry Harkness. London: Smith, Elder, and Co., 1832. Original green quarter-linen and gray paper over boards, printed paper label on spine. First edition. Includes a brief vocabulary and phrases, English-Toda, pp. 173-175. First published vocabulary of Toda.

[**TOGO FRENCH**] French is the official language of Togo. The French spoken in Togo is not sufficiently different from standard French to be considered a separate dialect by linguists, or listed separately in Ethnologue.

**1975:** [LILLYbm] *Dictionnaire des particularités du français au Togo et au Dahomey*, by S[uzanne] Lafage. [Abidjan]: Université d'Abidjan, Institut de linguistique appliquée, 1975. [Original?] blue cloth over boards, lettered in white. Pp. [4] 1 2-3 4-6, I-IX X -XII, 1 2-222. First edition. Includes, pp. [1]-213, a dictionary of African terms used by French-speaking natives in Togo and Dahomey, as well as special uses of French terms, with detailed explanations and examples in sentences.

"The *Dictionary of French in Togo* constitutes one of the elements of a future Dictionary of French in Black Africa... This is not a matter of a dictionary in the conventional sense, and in particular no claims are made of its being normative or objective. What is involved is an inventory of the peculiarities of French as it is actually spoken in Togo" (Preface, Laurent Duponchel, tr: BM). "We hope that this inventory, 'breaking new ground' in a field previously somewhat unexplored... will awaken sufficient interest to elicit constructive criticism, additional notes, or supplementary information" (Introduction, tr: BM). The author remarks that the only prior lexical study of French in Togo and Dahomey known to her is that of P. LeBoul, "Africanismes en usage au Togo et au Dahomey," CELTA de Lumbumbashi Bulletin No 3 and 4, 1973.

[**TOGO, LANGUAGES OF**] Togo is a multilingual country. According to one count, 39 languages are spoken. Of these, the official language is French. Two spoken indigenous languages were designated politically as national languages in 1975: Ewé (Ewe: Èvègbe; French: Evé) and Kabiyé. Among the other languages in Togo, Mina (the dialect of Ewé spoken in Lomé) serves as the working language in the south of the country, Mobaa, Tem (also called Kotokoli) and Fula (Fula: Fulfulde; French: Peul). Most of the indigenous languages of the country can be divided into two groups: the Gur languages in the north, and the Kwa languages in the south (Wiki).

[**TOHONO O'ODHAM**] O'odham (pronounced ['ʔɔʔɔðɦiam]) or Papago-Pima is a Uto-Aztecan language of southern Arizona and northern Sonora, Mexico, where the Tohono O'odham (formerly called the Papago) and Akimel O'odham (traditionally called Pima) reside. In 2000 there were estimated to be approximately 9,750 speakers in the United States and Mexico combined, although there may be more due to underreporting. It is the 10th most-spoken indigenous language in the United States, the 3rd most-spoken indigenous language in Arizona after Western Apache and Navajo. It is the third-most spoken language in Pinal County, Arizona and the fourth-most spoken language in Pima County, Arizona. Approximately 8% of O'odham speakers in the US speak English "not well" or "not at all", according to results of the 2000 Census. Approximately 13% of

O'odham speakers in the US were between the ages of 5 and 17, and among the younger O'odham speakers, approximately 4% were reported as speaking English "not well" or "not at all". Native names for the language, depending on the dialect and orthography, include O'odham ha-ñe'okĩ, O'ottham ha-neoki, and O'odham ñiok (Wiki).

Ethnologue: ood. Alternate Names: Nebome, Nevome, O'odham, O'othham, Papago-Pima, Tohono O'otham, Upper Piman.

**1908:** [LILLYbm] *The Pima Indians*, by Frank Russell [1868-1903]. Washington, [D.C.]: Government Printing Office, 1908. Original green cloth over boards, lettered and decorated in gold. Pp. [2] 1-2 3-389 390 + 47 plates. First edition. "Extract from the Twenty-Sixth Annual Report of the Bureau of American Ethnology," 1908. Includes "Linguistics. Vocabularies", p. 269-270, with list of "four short vocabularies of the Pima language in manuscript in the possession of the Bureau of American Ethnology," the first of which is published in Schoolcraft, volume III, page 461, and "forms the basis of the English-Pima vocabulary published in *Die Pima-Sprache* by Buschmann in 1857 (p. 367).

"Lieutenant Whipple obtained a vocabulary of 67 Pima words, which was published in his Report upon the Indian Tribes, Pacific Railroad Reports, volume III (Pt. III, p. 94). In the Journal of the Royal Geographical Society for 1841, page 248, there is a Pima vocabulary of 38 words....In his Opuscula, page 351, R. G. Latham has published a vocabulary of 27 words [see under **LANGUAGES OF THE WORLD: POLYGLOT**]... As example of the orthography and extent of these vocabularies, two are republished below" including English-Pima vocabularies by Coulter and Latham (app. 64 words), p. 270.

"From November, 1901, until June, 1902, the writer made his headquarters at Sacaton...on the Gila River reservation, in southern Arizona, where he was engaged in a study of the Pima tribe:" (Introduction).

**1969:** [LILLYBM] *Dictionary. Papago / Pima-English. O'othham-Mil-gahn. English-Papago/Pima. Mil-gahn-O'othham*, compiled by Dean & Lucille Saxton. Tucson, Arizona: The University of Arizona Press, 1969. Original orange, black and gray wrappers, lettered in orange and white. Pp. [10] 1-191 192 [2]. First edition. Includes Papago-Pima-English, pp. 1-51, English-Papago-Pima, pp. 53-101, and a bibliography, pp. 190-191. This is the first dictionary of the language.

"Papago, and its mutually intelligible neighbor to the north, Pima, constitute one of the most important Indian languages of the Southwest. Yet, by comparison with its importance, published accounts of it are meager indeed...this is the first modern work which makes available to the public a substantial body of Papago-Pima data" (Prologue, Kenneth L. Hale). "The vocabulary recorded here was compiled during field work in villages of the Papago Indian Reservation under the direction of the Summer Institute of Linguistics from 1953 to the present [1968]. Papago is the language of the desert people (Tohono O'odham), 14,000 people living in scattered villages of southern Arizona and northern Sonora, Mexico" (Introduction).

**1973-1976:** [LILLYbm] *A dictionary of Papago usage*, by Madeleine Mathiot. Two vols. Bloomington, Indiana: Indiana University, 1973-1976. Original red and black wrappers, lettered in white and black. Pp. [Vol. 1] [16] 1-5 6-504 [2]; [Vol. 2] [10] 1-504

[2]. First edition. Series: Indiana University publications. Language science monographs, v. 8/1-2. Includes Papago-English, pp. 135-504 (in vol. 1) and 1-504 (in vol. 2).

"This is a Papago-English dictionary intended primarily for the linguistically untutored nonnative speaker of Papago who has dealings with the tribe and wishes to improve his command of the language.... The terms contained in this dictionary were collected from the Totoguañ dialect of Papago spoken in the Santa Rosa area of the Papago reservation in Arizona. Whenever available in the author's data, variant forms from other dialects-mostly Kolóodi-are cited" (Preface).

**1995:** [LILLYbm] *Dictionary. Papago / Pima-English. O'othham-Mil-gahn. English-Papago / Pima. Mil-gahn-O'othham*, by Dean Saxton, Lucille Saxton, & Susie Enos. Tucson, Arizona: The University of Arizona Press, 1995. Original red cloth over boards, lettered in black. 145 pp. Third printing of the second revised and expanded edition of 1983. It was the first dictionary of the language.

[**TOKELAUAN**] Tokelauan /toʊkəˈlɑʊən/ is a Polynesian language spoken in Tokelau and on Swains Island in American Samoa. It is closely related to Tuvaluan and distantly related to Samoan and other Polynesian languages. Tokelauan has a co-official status with English in Tokelau . There are approximately 4,260 speakers of Tokelauan, of whom 2,100 live in New Zealand, 1,400 in Tokelau, and 17 in Swains Island. Loimata Iupati, Tokelau's resident Director of Education, has stated that he is in the process of translating the Bible from English into Tokelauan (Wiki).

**1969:** [LILLY] *A Tokelau-English vocabulary*, by D. W. Boardman. Wellington: Islands Education Division, Dept. of Education for the Dept. of Maori and Island Affairs, 1969. 66 p.; 23 x 34 cm. Original white wrappers, lettered and illustrated in black. First substantial printed vocabulary of this language.

"The publication of this word-list will provide [sic] an urgent need not only for the Tokelau people themselves, but also for others interested in what is virtually, at present, a spoken language only" (Foreword, D. J. Robinson).

"As the need for some kind of Tokelau-English vocabulary seems to be felt by a growing number of people it was decided not to delay publication unduly but to bring out what is available with minimum delay" (Introduction).

**1986:** [LILLYbm] *Tokelau dictionary*, compiled by Ropati Simona. Apia, Western Samoa: Office of Tokelau Affairs, 1986. Original yellow wrappers, lettered in red. Pp. *i-x xi-l [4] 1 2-503 504-506*. First edition. Includes Tokelauan-English, pp. [1]-434, and an English-Tokelauan wordlist, pp. [439]-503.

"A decade or so ago, the Tokelau people recognized the need for a dictionary of their language, both as a practical resource... and as a record of their language. We are proud that this dictionary has been produced largely by Tokelauans" (Foreword, by the Faipule of Tokelau)

"This [dictionary]...has been ten years in the making. The first [precursor] was a vocabulary of 214 items ... published in 1846 by Horatio Hale on the basis of his brief

visit to the atolls as a member of the United State Exploring Expedition in 1841....Over 120 years passed before the next publication-a *Tokelau-English Vocabulary* of some 1200 items compiled by D. W. Boardman ... published in 1969 [see above]. This was followed by the avowedly preliminary *Tokelau-English Dictionary* of about 3000 items by Hosea Kirifi and J. H. Webster which was produced on a school duplicating machine in Tokelau in 1975" (Introduction, Judith Huntsman and Antony Hooper.).

[**TOK PISIN**] Tok Pisin (English /tɒk 'pɪsɪn/ Tok Pisin [ˌtɒkpi'sɪn]) is a creole language spoken throughout Papua New Guinea. It is an official language of Papua New Guinea and the most widely used language in that country. In parts of Western, Gulf, Central, Oro Province and Milne Bay Provinces, however, the use of Tok Pisin has a shorter history, and is less universal, especially among older people. While it likely developed as a trade pidgin, Tok Pisin has become a distinct language in its own right. Non-academic Anglophones living in Papua New Guinea tend to refer to it as "Pidgin," "New Guinea Pidgin" or "Pidgin English", but it is common usage among academics, as well as people familiar with Tok Pisin, to refer to the language by its own name. Between five and six million people use Tok Pisin to some degree, although not all speak it well. Many now learn it as a first language, in particular the children of parents or grandparents who originally spoke different vernaculars (for example, a mother from Madang and a father from Rabaul). Urban families in particular, and those of police and defence force members, often communicate among themselves in Tok Pisin, either never gaining fluency in a vernacular (tok ples), or learning a vernacular as a second (or third) language, after Tok Pisin (and possibly English). Perhaps one million people now use Tok Pisin as a primary language (Wiki).

**ca. 1943:** [LILLYbm] *Booklet on pidgin English as used in the mandated territory of New Guinea. With dictionary of nouns and phrases. This language is used in conversation with natives, Asiatics, and German white missionaries*, by E[ustace] C[yril] N[orman] Helton. Brisbane: W. H. Adams, [ca.1943]. Original brown stapled wrappers, lettered and illustrated in black. Pp. 1-2 3-64. First edition. Not in Zaunmüller. Reinecke 87.176 (not seen by compilers: "prepared specifically for use during the war with Japan"). Includes English-New Guinea Pidgin English, pp. 23-47, and "Pidgin English-Dictionary English," pp. 48-64.

"With that restless feeling that all soldiers experience after returning from Active Service, after the Great War, the author turned his footsteps towards New Guinea in search of new adventure and as the result of twenty-odd years of experience this book has been compiled. The search for gold led him to all part[s] of New Guinea involving a close study of the natives, their customs and their language....This book is presented in the hope that it will be the means of saving many valuable lives and lightening the burden of the soldier, in his valiant efforts to regain our country for us" (Preface). Includes a list entitled "Don't do these things," including: "[Don't] be the first to walk across a stream near the coast. The natives see crocodiles very quickly. Have one of the natives walk in front of you," and "[Don't] lead the party at any stage. The tracks are narrow and should anything start it will give you a chance to get away." This appears to be the earliest published vocabulary of Pidgin English. "This booklet was produced during the Pacific

War (1941-1945). Very few copies remain today and the copy that I have sent to you is in exceptionally good condition." (bookseller's description: Bill McGrath, Pacific Book House).

Reinecke 87.281 ("Unscientific, but a more sophisticated work than Helton (1943); thought it was written for wartime use, its usefulness is shown by repeated printings"). With eight pages of photographs of native New Guineans. Includes Pidgin English-English, pp. 23-67, and English-Pidgin English, pp. 68-128.

"No attempt has been made, up to the present, to compose or standardize Melanesian Pidgin-English, and no book of reference is available to those who desire...to have a good knowledge of [the language]" (Preface). "Melanesian Pidgin-English is a most facile language, capable of embracing any subject. It is quite as exact as any native language and more adaptable...The only argument against Pidgin-English is an unreasonable and unreasoning antipathy toward it from a number of the white population" (Apologia).

"John Murphy died a few months ago [1997] and his widow gave me this first edition. I have never seen a first edition previously. Captain John Murphy is one of New Guinea's characters. He went to New Guinea in the 1930s as a District Officer and during the Pacific War he became a Coastwatcher, Army Officer and eventually a prisoner of the Japanese at Rabaul, New Britain. He was one of 7 survivors of 67 allied prisoners that were imprisoned at Rabaul. An American fighter pilot who now lives at Westborough, Massachusetts, wrote a book about his capture and imprisonment and he attributes his survival to John Murphy" (Bill McGrath, Pacific Book House).

Second edition **1947**: [LILLYbm] *The Book of Pidgin English, Being (1) A Grammar and Notes, (2) A Pidgin English-English Dictionary, (3) An English-Pidgin English Dictionary*, by John J[oseph] Murphy. Brisbane: W. R. Smith & Paterson, 1947. Original white (front cover) and gray (rear cover) paper pasted on boards, lettered in green and with a photograph of "Mt. pages of photographs of native New Guineans. Includes Pidgin English-English, pp. 22-68, and English-Pidgin English, pp. 69-129. This copy signed on the front flyleaf by the author: "Regards / John J. Murphy."

"Many adjustments and additions have been made throughout the book to make it as nearly accurate and comprehensive as possible with a subject like Pidgin English. Obviously the war in New Guinea could be expected to introduce many new words into Pidgin English...I have refrained from adding new words that the natives currently use round the battle areas - they are almost all English words covering military matters. All we can be sure of at present is that some are *likely* to survive" (Preface to the Second Edition (Amended)).

"I know now that none [of the military terms] have survived [in Pidgin English] (1965). It is possible that Pidgin English could be creolized and end up as the National language of Papua New-Guinea, just as Bazaar Malay has done in Indonesia" (Preface to the Eighth Printing (Revised Edition)).

"Ninth edition" [fifth edition], revised, **1973**: [LILLYbm] *The Book of Pidgin English (Neo-Melanesian), Being (1) A Grammar and Notes, (2) An Outline of Neo-Melanesian, (3) Classified Vocabulary and Phrases, (4) a Neo-Melanesian-English Dictionary, (5) An English-Neo-Melanesian Dictionary*, by John J[oseph] Murphy. Brisbane: W. R. Smith & Paterson, 1973. Original yellow limp cloth wrappers, lettered in black and decorated in red, black, yellow and gray-green. Pp. 1-4 5-191 192. "New revised and enlarged edition [fifth edition]." Includes new photos and colored plates of birds, Neo-Melanesian-English, pp. 73-118, and English-Neo-Melanesian, pp. 119-191.

"This book is recast in the standard orthography, as determined by the Department of Education in New Guinea after a long period of research" (Preface to Ninth Printing (Revised Edition)).

Revised [sixth] edition **1985**: [LILLYbm] *The Book of Pidgin English, revised edition*, by John J[oseph] Murphy. Bathurst, N.S.W.: Robert Brown & Associates, 1985. Original stiff bright orange wrappers, lettered in black and white, and decorated in white and yellow. Pp. 1-4 5-180.

Revised [sixth] edition. Includes Neo-Melanesian-English, pp. 69-110, and English-Neo-Melanesian, pp. 111-179. This copy signed by the author on the title page and dated 1/10/85.

**1945:** [LILLY] *Dictionary of "Bisinis-English" (Pidgin-English)*, by Rev. Father J. Schebesta, S.V.D., revised by Rev. Father L. Meiser, S.V.D. East New Guinea: W. Van Baar, [1945]. Original bark?-paper. Mimeographed. Pp. [4] ff. 1-3, pp. 1-26, ff 27-177. First edition. Not in Zaubmüller. Reinecke 87.394 ("Sechebesta produced a *Pijin Lexikon* before 1941, revised by Meiser in 1945. Valuable for detailed definitions and examples of usage. A number of coinages by the authors are included. The orthography is obsolete."). Includes "Bisinis-English"-English throughout. Lilly has two copies, one is partially interleaved and copiously annotated with equivalents in the Hagen language (of the Mt. Hagen area) by Rev. Ernest Brandewie, author of *Contrast and context in New Guinea culture: the case of the Mbowamb of the central highlands* (Anthropos Institute, 1981).

**1957a:** [LILLYbm] *Grammar and Dictionary of Neo-Melanesian*, by Francis Mihalic. Techny, Illinois: The Mission Press, S.V.D., 1957. Original limp unlettered maroon cloth with maroon linen spine. Pp. *i-iv v-xxi xxii, 1 2-60, 1 2-318*. First edition. Not in Zaubmüller. Reinecke 87.271 ("Designed for a general audience, but a careful, scholarly work"). This copy signed by the author on the title page: "Complimentary in any sense / F. Mihalic."

"Based on the earlier dictionary of the Revs. J. Schebesta and L. Meiser [*Dictionary of 'Businis-English' (Pidgin English)*, (New Guinea, 1945)] (which was not available to the general public), it embodies both a revision of their work and the Rev. Mihalic's further findings. It is thorough, extensive, and has undergone several careful revisions before reaching its present form" (Introduction, Robert A. Hall). "So a dictionary is needed. But why in Neo-Melanesian? For the simple reason that we cannot conceivably compile one for each of the three hundred and more native languages extant in the territory. That being so, is it not logical and realistic to select one language, the one most universally used? On this score Neo-Melanesian wins hands down.. Therefore we choose it as our bridge to English not, however, implying in any way that we thereby perpetuate it indefinitely. Nor does using it mean that we propose to hinder in any way the attainment of the goal set up for us by both the department of Education and the United Nations Trusteeship Council, namely, literacy in standard English. On the contrary, the sole aim of this dictionary and grammar is to span the gap to that farther shore. For my own part, I am looking forward to the day when Neo-Melanesian and this book will be buried and forgotten, when standard English and the Oxford dictionary will completely replace both... The second aim of this dictionary is to standardize written Neo-Melanesian. This is the first book published in the officially approved standard orthography of Neo-Melanesian (Pidgin English)" (Foreword). The first standard dictionary of the language.

First edition, Australian issue, **1957:** *Grammar and Dictionary of Neo-Melanesian*, by Francis Mihalic. Westmead, N.S.W.: Westmead Printing [for The Mission Press], 1957. Original tan wrappers, lettered in black. Pp. *i-iv v-xxi xxii, 1 2-60, 1 2-318*. First edition. Not in Zaubmüller. Reinecke 87.271. Contents as previous entry, with only title page differing.

**1957b:** see under WAFFA.

**1964:** [LILLYbm] *A Kuk Buk in Pidgin*, by Laurel Levi. Rabaul, T. N. G.: Methodist Mission Press, 1964. Original light green wrappers, lettered and illustrated in black. Pp. 1-4 5-111 112. First edition. Reinecke 87. 246. Includes English-Pidgin glossary for cooking, pp. 97-111, double columns. Recipes are in Pidgin English. "Once New Guinea was cut off from the rest of the world. All the women of New Guinea knew of cooking was their own village cookery. Now the world has come to New Guinea.... So it is natural for women here...to want to know how to cook their own natural foods in new and varied ways. It is with pleasure, therefore, that I introduce Mrs. Levi's cookery book written in Pidgin. It is always interesting for a woman to try out new recipes and this little book should be a great help to those New Guineans who have not yet mastered reading English. We wish you all good cooking" (Introduction, Vera N. Foldi, President, Girl Guides Local Association).

**1969:** [LILLYbm] *Concise Dictionary of New Guinea Pidgin (Neo-Melanesian) with translations in English and German*, compiled by Friedrich Steinbauer. Madang, New Guinea: Kristin Press, 1969. Original stiff ochre wrappers, lettered in red and black and illustrated in black. Pp. [4] 5-223 224. First edition. Reinecke 87.425. Neo-Melanesian-English-German throughout, with language of origin and sample Neo-Melanesian sentence given for each word, pp. 10-223. Second copy: IUW. "This edition was made possible through the interest and aid of the German Missionary Council and the Bavarian Lutheran Church" (note on p. [224]).

"This dictionary contains a list of about 1900 words of the New Guinea Pidgin language, which is also called Neo-Melanesian. The dictionary is a concise one, since it does not include all the words used by every segment of the population and in every dialect area. However, it does contain all the words...that are used universally in all areas of the Territory and by all speakers of the language... Word combinations and varieties of word order in the sentence give a possible range of expression [in Neo-Melanesian] roughly equal to that of the vocabulary of the average European... As you speak it, remember that it is a valid language by itself, not a garbled form of English. Only when you remember this will you be able to learn to speak it well" (Introduction). This appears to be the first dictionary of Neo-Melanesian to include German.

**1971:** [LILLYbm] *Tok Pisin. Supplementary notes of Pidgin English Neo-Melanesian* [cover title], by L. R. Healey. [Port Moresby]: [published by the author], [1971]. Original cream-colored wrappers, lettered and illustrated in black; orange plastic spiral binding. Pp. 1-219 220, I-XXXIII XXXIV. First edition. Reinecke 87.172bis (not seen by compilers). Includes "Dictionary Tokpisin to English", pp. I-XXXIII (double columns).

"'Tokpisin' or Neo Melanesian is no longer a status language imposed by whites, but the lingua franca of a large group of indigenous people who mostly speak it fluently or not at all and a smaller group of whites who speak it varying degrees of fluency, the majority poorly... It could develop into the New Guinea people's own language... A dictionary is necessary for use with these notes, although a concise alphabetical list of oft used words and their meanings can be found at page [I] to [XXXIII]. Two very well known Tokpisin texts have been written, one by Fr. Mihalic SVD., which is a most scholarly text on Tokpisin and a shorter text by J.J. Murphy, both of which are eminently suitable for use with these notes... Some words in constant use some years ago are now, because of racial overtones, universally avoided. Some for the same reason may not be

used by whites but bear little if any racial implication if spoken by native people. There are some words safe to use at the moment which assuredly will become unpopular in time when native people more universally understand their origin. [A brief discussion of words "best left out of Tokpisin conversation" follows]" (Tokpisin: An Introduction).

**1971:** [LILLYbm] *The Jacaranda Dictionary and Grammar of Melanesian Pidgin*, by Francis Mihalic. [Milton, Q.]: Jacaranda Press, 1971. Original brown cloth over boards, lettered in yellow; d.j. yellow, lettered in brown. 376 pp. First edition. Reinecke 87.276 ("A revision of Mihalic (1957), taking into account the new orthography"). This copy inscribed: "To dear Barb / To celebrate your first / posting as 'Mrs F.C.' / Lots of love / Colin / Christmas 1973." The "most comprehensive [such] dictionary ever published... a completely revised and updated edition of Mihalic's original *Dictionary and Grammar*-long recognized as the standard work in the field... contains the most extensive bibliography on Melanesian Pidgin ever compiled [pp. 52-54]."

**1986:** [LILLYbm] *Papua New Guinea phrasebook*, by John Hunter. South Yarra, Vic., Australia; Berkeley, CA, USA: Lonely Planet, 1986.: 93 p.: ill.; 13 cm. Original white and green wrappers, lettered in white and green, with an illustration of a native head in black and white on front cover. First edition. English-Tok Pisan vocabulary, pp. 59-90.

[**TOL**] Tol, also known as Eastern Jicaque, Tolupan, and Torupan, is spoken by approximately 500 Tolupan people in La Montaña de la Flor reservation in Morazán Department, Honduras. It was also spoken in much of Yoro Department, but only a few speakers were reported in the Yoro Valley in 1974. Tol speakers refer to themselves as the Tolpán, but are called Jicaques or Turrupanes by ladinos. Tol used to be spoken from the Río Ulúa in the west, to modern-day Trujillo in the east, and to the Río Sulaco in the inland south. This area included the areas around modern-day El Progreso, La Ceiba, and possibly also San Pedro Sula. Most Tolupan had fled the Spanish from coastal regions by the early 1800s. The Tol speakers at La Montaña de la Flor fled the Yoro Valley in 1865 to avoid being conscripted into forced labor by the local governor (Campbell & Oltrogge 1980:206, Hagen 1943, Chapman 1978) (Wiki).

Ethnologue: jic. Alternate Names: Jicaque, Tolpan, Xicaque. [Swanton and Gatschet both list Lean y Mulia as a dialect of Xicaque [Tol]].

**1923:** [LILLYbm] "The Jicaques of Honduras," by Edward Conzemius, in: *International Journal of American Linguistics*, New York, Vol. 2, Nos. 3-4 (January 1923), pp. 162-170. Includes Jicaque [Tol]-English vocabulary, pp. 167-170. First substantial published vocabulary of the language.

"The Indians called Jicaques (Xicaques, Hicaques) by the Spanish-speaking inhabitants of Honduras and 'Tol' or 'Tor' by themselves, are spread over a large part of Central Honduras. They number from 1200 to 1500 and are divided into two tribes speaking two very closely related languages. The western tribe lives in the vicinity of the pueblos Chamelecon and Villanueva, Department of Cortés. It is near extinction, not exceeding a population of 100. The Eastern tribe numbers over 1000 people....Alberto Membreño gives a vocabulary of the language in the second edition of his 'Hondurñismos' published in 1897; a short text precedes it but from the statements therein

it is evident that the author had never visited the villages of the Indians (fn. See also vocabularies in F. Guardia and J. F. Gerraz, Carlos Torres, Karl Sapper in Walter Lehmann, *Zentral America I*, Pt. 2, pp. 631-635 et seq.).... I had much difficulty getting the vocabulary given below as the Indians at first would not permit me at all to write down the words, stating that it was impossible to reduce them to writing. With small presents, mostly of tobacco I finally bought their confidence and at last was allowed to write down words in their language....The following vocabulary was taken in various parts of the department of Yoro, but the same language is spoken by the entire Eastern branch" (pp. 163, 165-165).

[**TOLAKI**] Tolaki (To'olaki), or Tolakinese, is the major language of Southeast Sulawesi, Indonesia. It is an Austronesian language of the Celebic branch (Wiki).

Ethnologue: lbw. Alternate Names: Laki, Lolaki, To'olaki, Tokia, Tololaki.

**1999:** see under **BUNGKU-TOLAKI LANGUAGES: POLYGLOT.**

[**TOLOWA**] The Tolowa language (also called Chetco-Tolowa, or Siletz Dee-ni) is a member of the Pacific Coast subgroup of the Athabaskan language family. Together with three other closely related languages (Lower Rogue River Athabaskan, Upper Rogue River Athabaskan or Galice-Applegate and Upper Umpqua or Etnemitane) it forms a distinctive Oregon Athabaskan cluster within the subgroup (Wiki).

What is now known as the Siletz Dee-ni language was restricted historically to speakers in "a small area on the central Oregon coast." Linguists have concluded that Siletz is not related to Tillamook at all, but is a form of Tolowa, an Athabaskan language rather than a Salishan language. The Tolowa people were one of the 20 Native American groups whose descendants comprise the Confederated Tribes of Siletz (Wiki).

Ethnologue: tol. Alternate Names: Smith River.

**1907-1930:** see Vol. 13 under **INDIGENOUS LANGUAGES OF NORTH AMERICA: POLYGLOT.**

**1917:** [LILLYbm] "A Siletz Vocabulary," by Leo J. Frachtenberg, in: *International Journal of American Linguistics*, New York, Vol. 1, No. 1 (July 1917), pp. 45-46. Includes Siletz-English numerals, terms of relationship, parts of the human body, animals, and two other nouns, pp. 45-46.

"The dialect spoken by the Indian tribe that lived on the Siletz River prior to the establishment of the Siletz Indiana Reservation (1856) represents the most southern branch of the Salish linguistic family.... The following material was obtained in 1910 from Susan Fuller, an old Indiana woman living on the Siletz Reservation" (p. 45).

**1989:** [LILLYbm] *Xus We-Yó'. Tolowa (Tututni) Language Dictionary. Second Edition.* Crescent City, CA: Tolowa Language Committee, 1989. Original maroon cloth over boards, lettered in gold, with illustrated red paper lettered in black pasted to front cover. Pp. *i* ii-xxi *xxii*, 1 2-488. This copy belonged to Karl van Teeter, with his dated signature and blind stamp of ownership. Teeter was author of *The Wiyot language* (Berkeley: University of California Press, 1964). Includes English-Tolowa, pp. [1]-411.

"The goal of this volume is to update the 1983 edition of the Tolowa dictionary and further document our language. the material in this edition of Tolowa language is a correction and expansion of the original language work" (Preface to second edition). Tolowan is a member of the Athabaskan language family. We share this language stock

with the Hupa, Chetco, Tututni, Navaho, Apache, and the Athabaskans of Canada and Alaska. The domain of our Athabaskan language covered a territory that ranged from the Sixes River, Oregon, south to Wilson Creek, California" (Introduction).

**1995:** [LILLY] *Now You're Speaking—Tolowa*, by Me'laasline Loren Bommelyn. [Arcata, CA]; Loren Bommelyn, 1995. "1st Edition" on title page. "Printed in cooperation with Center for Indian Community Development, Humboldt State University, Arcata, CA" (verso of title page). 177 p. 14 cm. Original red wrappers, lettered in white and dark red, with a color photo of tribe members on front cover. English-Tolowa, pp. 3-123, with illustrations.

"In 1969 the Tolowa language project was started in Crescent City. Elders were gathered together to start the documentation process. The project stabilized the language and extended it into present day. The original documentation was taken down in Uni-fon. In 1993 the orthography was shifted to the current linguistic format" (Introduction).

[**TONGA (Mozambique)**] Guitonga (sometimes spelled Gitonga, also less frequently also called Tonga) is a Bantu language spoken along the southern coast of Mozambique. Often thought to be closest to Chopi to its south, the two languages have only a 44% lexical similarity (Wiki).

Ethnologue: toh. Alternate Names: Bitonga, Gitonga, Inhambane, Shengwe, Tonga-Inhambane.

**1955:** [LILLYbm] *A study of giTonga of Inhambane*, by L. W. Lanham. Johannesburg: Witwatersrand University Press, 1955. viii, 264 l. illus, map. 33 cm. Reproduced from typescript. Original gray card lettered in black, with unprinted blue-gray linen spine. Bantu linguistic studies, 1. Includes various brief Tonga-English word lists.

[**TONGA (Zambia)**] The Tonga language, Chitonga, of Zambia and Zimbabwe, also known as Zambezi, is a Bantu Language primarily spoken by the Tonga people in those countries who live mainly in the Southern and Western provinces of Zambia, and in northern Zimbabwe, with a few in Mozambique. The language is also spoken by the Iwe, Toka and Leya people, perhaps by the Kafwe Twa (if that is not Ila), as well as many bilingual Zambians and Zimbabweans. It is one of the major lingua francas in Zambia, together with Bemba, Lozi and Nyanja.

The Tonga of Malawi, which is classified by Guthrie as belonging to zone N15, is not particularly close to Zambian Tonga, which is classified as zone M64, and can be considered a separate language. The Tonga-speaking inhabitants are the oldest Bantu settlers, with the Tumbuka, a small tribe in the east, in what is now known as Zambia. There are two distinctive dialects of Tonga, Valley Tonga and Plateau Tonga. Valley Tonga is mostly spoken in the Zambezi valley and southern areas of the Batonga (Tonga People) while Plateau Tonga is spoken more around Monze district and the northern areas of the Batonga. Tonga (Chitonga or iciTonga) developed as a spoken language and

was not put into written form until missionaries arrived in the area. The language is not standardized, and speakers of the same dialect may have different spellings for the same words once put into written text. Maho (2009) removes Shanjo as a separate, and not very closely related, language (Wiki).

Ethnologue: toi. Alternate Names: Chitonga, Plateau Tonga, Zambezi.

**1952:** see under **TUMBUKA**.

[**TONGAN**] Tongan /'tɒŋən/ (lea fakatonga) is an Austronesian language of the Polynesian branch spoken in Tonga. It has around 200,000 speakers and is a national language of Tonga. It is a VSO (verb–subject–object) language (Wiki).

Ethnologue: ton. Alternate Names: Faka Tonga, Tonga.

**1818:** [LILLYbm] *An Account of the Natives of the Tonga Islands in the South Pacific Ocean. With an original grammar and vocabulary of their language. Compiled and arranged from the extensive communications of Mr. William Mariner, several years resident in those Islands*, ed. by John Martin. 2 vols. London: John Murray, 1818.

Contemporary full calf, rebaked with leather with red and olive labels, lettered in gold. Vol. I: *i-vii* vii-lvi, 1 2-444 445-446; Vol. II: [4], 1 2-344 345-492. Second edition, with additions. Not in Zaunmüller. Includes: [Vol. II] "A Grammar of the Tonga Language," pp. [345-386], "A Vocabulary Tonga and English," pp. [387-428], and "A Vocabulary English and Tonga," pp. [429-492]. Vol. I frontispiece with Mariner in the costume of the Tonga Islands; Vol. II frontispiece fold-out map of the Tonga Islands.

"[Description of Mariner and Jeremiah Higgins dancing Tongan dances in London before friends] Mr. Mariner was dressed as represented in the frontispiece, and Higgin's only apparel was a sort of circular apron, made of loose strips of matting very thickly set... He also had a wreath of artificial flowers round the head, and another round the neck. He is beautifully tattowed from the hips nearly to the knees, agreeably to the custom of the Tonga people. Upon them it appears of a black colour, but upon a white man it causes the skin to resemble soft blue satin. The neatness, and I might almost say, the mathematical precision with which the pattern is executed, far surpasses the expectation of all who see it for the first time" (Preface). "The night dance called *oóla* is a very ancient one in Tonga... [p. 324-326, samples of words and music to 'The Oóla' which may be the first printed examples of the dance we call the Hula]" ("Songs and Music of the Tonga People"). "If we could but readily and for a time emancipate our minds from a sense of the nicer grammatical distinctions in our own languages, it is presumed the Tonga dialect... would be found very simple and easy to be attained; but as it is, the wide differences of our own habits of speech will give it the appearance of a language repeat with idioms, and abounding in circumlocutions" (A Grammar of the Tonga Language).

Third edition **1827:** [LILLYbm] *An Account of the Natives of the Tonga Islands in the South Pacific Ocean. With an original grammar and vocabulary of their language. Compiled and arranged from the extensive communications of Mr. William Mariner, several years resident in those Islands*, ed. by John Martin. 2 vols. Edinburgh: Constable & Co. and Horst, Chance & Co., 1827. Original green cloth over boards with original printed paper title-labels on spines; "a particularly fine, clean, wholly uncut and completely sound set." Vol. I: [6] *i-v* vi-xxxiv, 35 36-340 [4]; Vol. II; [6] *i-*

*iii iv-vii viii, 9 10-234, i-iii iv-cviii [4].* Third edition, "considerably improved." Constable Miscellany, Vols. XIII-XIV. Includes: [Vol. II] "A Grammar of the Tongan Language," pp. [iii]-lviii, and "A Vocabulary Tonga and English," pp. [xlix]-xciii. Both volumes with additional Constable's Miscellany illustrated short title pages. Vol. I frontispiece fold-out map of the Tonga Islands. "Engraved specimens of the Songs and Music of the Tonga People" facing p. 220. Includes "upwards of two thousand genuine Tonga words" (Introduction to the third edition). Although this is the edition reprinted by AMS in 1979, it does not include the English-Tonga portion of the vocabulary present in the second edition.

**1845:** [LILLYbm] *A vocabulary of the Tonga language, arranged in alphabetical order: to which is annexed a list of idiomatical phrases*, by S[tephen] Rabone. Neiafu, Vavau: The Wesleyan mission press, 1845. Later 19<sup>th</sup>-century full brown calf, spine decorated in gold with brown labels lettered in gold. Pp. [2] 1-3 4-212 (interleaved throughout)+ 2 pp. added in manuscript [of 217 pp.] "The title page is torn hand mounted, with loss of two words; 212 (of 217) pages are present with some of the missing text supplied in 2 pp. of manuscript at the back, the early leaves have defective lower margins with minor loss of text (sense generally remains clear), the book is interleaved throughout, with occasional annotations of an informed nature, one preliminary leaf with additional informed annotations. Mariner had appended a vocabulary of the Tonga language to his *Account of the Natives of Tonga*, 1819 (see above for 2<sup>nd</sup> and 3<sup>rd</sup> editions), but this *Vocabulary* by Rabone appears to be the first separately published dictionary of the language. Zauhmüller, col.379, not in Vancil, not in Trübner, 4 copies in NUC" (Rulon-Miller description).

**1925:** [LILLYbm] "Supplementary Tongan Vocabulary," by E. E. Collocot. In: *The Journal of the Polynesian Society*, No. 135, Vol. XXXIV, September, 1925, pp. 193-213. "(Continued from Vol. 34, No. 2)". Complete issue. Original pink wrappers, lettered in black.

**1959:** [LILLYbm] *Tongan dictionary: Tongan-English and English-Tongan*, C[lerk] Maxwell Churchward. London: Oxford University Press, 1959. Original turquoise cloth over boards, spine (faded) lettered in gold. Pp. [2] 1-vii viii-xiv, 1 2-836. First edition. Also issued in the same year in Nukualofa by the government of Tonga. Includes Tongan-English, pp. [1]-574, and English-Tongan, pp. [576]-836. First true dictionary of the language. This copy with "Colonial Office Library" stamped in blank on front cover and stamped in ink on title page.

"In the preparation of this dictionary full use has been made of the *English and Tongan Vocabulary* and the *Tongan and English Vocabulary* published in Shirley W. Baker in 1897, of the *Supplementary Tongan Vocabulary*, by E. E. V. Collocott, published in Volume 34 of the *Journal of the Polynesian Society* [see above], and of an earlier work, the *Dictionnaire Toga-Français*, published by the Marist Mission in 1890.

None of the material in these publications, however, has been merely transferred to the present volume, but... every word and every meaning has first been carefully investigated. In addition, many other words found in the existing literature, or heard in the speech of natives, or supplied by [my principal Tongan assistant] Feleti VI and others, have been included". The result is an entirely new dictionary... which is far larger, far more detailed, and (I believe) far more accurate and reliable, than any Tongan dictionary or vocabulary hitherto published" (Introduction). "Here and there, being unable to find a suitable Tongan expression, I have left the English word untranslated, but in its correct alphabetical position, so as to facilitate the insertion of a Tongan equivalent by any user of the Dictionary who may succeed in finding or inventing one" (p. 836).

**1992:** [LILLYbm] *A Simplified Dictionary of Modern Tongan*, by Edgar Tu'inukuafe. Aotearoa, N.Z.: Polynesian Press, 1992. Original maroon and red wrappers, lettered in white and black and white, with an illustration of the front cover. Pp. 1-6 7-278. First edition. English-Tongan, pp. 9-132, and Tongan-English, pp. 133-243, double-columned.

"This is the first dictionary to be compiled by a Tongan scholar... There are over 20,000 entries" (from the rear cover). "At a time when our Tongan language and culture is under threat, it is important that we nurture our heritage carefully. Likewise we must develop our English language skills if we are to take our place in the social and economic development of the world" (Foreword, HRH Princess Mele Siu'ilikutapu).

[**TONKAWA**] The Tonkawa language was spoken in Oklahoma, Texas, and New Mexico by the Tonkawa people. A language isolate, with no known related languages, Tonkawa is now extinct. Members of the Tonkawa tribe now speak English (Wiki).

**1949:** [LILLYbm] *An analytical dictionary of the Tonkawa language*, by Harry Hoijer[1904- ]. Berkeley: University of California Press, 1949. Original gray wrappers, lettered in black. Pp. i-ii iii iv, 1-74 75-76. First edition. Series: University of California publications in linguistics, v. 5, no. 1. Includes Tonkawa-English, pp. 4-74. First and only dictionary of Tonkawa, now extinct. This copy with the ink ownership signature "Elmendorf". William W. Elmendorf [1912-- ] was author of *The structure of Twana culture. With comparative notes on the structure of Yurok culture*, [Pullman, Washington State University], 1960, republished by Garland in 1974.

"The Tonkawa language, now nearly extinct, is the sole survivor of a group of languages formerly spoken in central and southern Texas. Data on the other languages of this group are scanty and unreliable, consisting for the most part of short vocabularies and brief religious texts collected by the early missionaries and travelers to this region. Swanton has published most of this material and has suggested that these languages were members of a single stock, the Coahuiltecan, to which, apparently, Tonkawa also belongs [see John R. Swanton under **COAHUILTECO**].... My work on the Tonkawa language began in 1927" (Introduction).

[**TONOCOTÉ**] Tonocoté may be the same language as Lule. Both are extinct and neither is listed in Ethnologue.

**1732:** see under **LULE**.

[**TONTEMBOAN**] Tontemboan is an Austronesian language, of northern Sulawesi, Indonesia. It is a Minahasan language, a sub-group of the Philippine languages. Other names and dialect names are: "Makela'i-Maotow, Makelai, Matana'i-Maore', Matanai, Pakewa, Sonder, Tompakewa, Tompasso, Tountemboan" (Wiki).

Ethnologue: tnt. Alternate Names: Pakewa, Tompakewa, Tountemboan.

**1908:** [LILLYbm] *Tontemboansch-Nederlandsch Woordenboek met Nederlandsch-Tontemboansch Register*, by J[ohannes] Alb[ert] T[raugott] Schwarz. Leiden: E. J. Brill, 1908. Contemporary brown half-leather, lettered in gold and decorated in gold and blind, with black marbled paper over boards. Pp. [2] I-V VI-X, I 2-690. First edition. Not in Zaunmüller. This copy with a note in ink on the half title indicating it was a gift from the Department van Kolonien, with the ownership signature of K. Wulff, dated April, 1909. This was almost certainly Kurt Wulff, one of the editors of a series of linguistic studies including *Beroringer mellem de finske og de baltiske (litauisk-lettiske) sprog* [Relationships between the Finnish and Baltic (Lithuanian-Lettish) Languages], by V. L. P. Thomsen, published in 1890. Includes Tontemboan-Dutch, pp. [1]-636, and Dutch-Tontemboan index, pp. [639]-685, with errata, pp. [687]-690. This appears to be the first dictionary of the language.

[**TOTONAC LANGUAGES**] Totonac is a language cluster of Mexico, spoken across a number of central Mexican states by the Totonac people. It is a Mesoamerican language and shows many of the traits which define the Mesoamerican Linguistic Area. Along with some 62 other indigenous languages, it is recognised as an official language of Mexico, though as a single language (Wiki).

Ethnologue lists nine separate Totonac languages.

**1956:** [LILLY] *Vocabulario de la lengua Totonaca*, compilado por Pedro Aschmann. México, D.F.: Instituto Lingüístico de Verano, 1956. Pp. 1-3 4-14; second pagination, 1 2-52 53-54. 23.2 cm. Third edition. Original light blue and red wrappers, lettered in black. Totonaco-Spanish, pp. [1]-52. The title on the cover is: *Vocabulario Totonaco*. From the library of the noted linguist Johannes Rahder, with his ownership stamp and manuscript note on title page. At this stage Totonac is still treated as a single language. The first edition appeared in 1949, the second in 1950.

"With the completion of this third edition, the author welcomes the collaboration of persons well acquainted with the totonac dialect, especially teachers in the rural area. This may be done in two ways: by submitting new words not included in the present work and correcting those already present. In this way the fruits to be harvested will be greater" (p. [54], tr: BM).

[**TOTONAC, XICOTEPEC DE JUÁREZ**] Apapantilla Totonac, or Xicotepec Totonac (Xicotepec de Juárez), is a Totonac language of central Mexico. Zihuateutla Totonac may be a separate language (Wiki).

Ethnologue: too. Alternate Names: Northern Totonac, Totonaco de Villa Juárez.

"Totonac is one of the many languages spoken in Mexico. There are approximately 125,000 people who speak the language. This dictionary is based on Totonac as it is spoken in the northern part of the state of Puebla... by approximately 10,000 to 15,000 people" (Introduction, tr: BM).

**[TOTONACAN LANGUAGES]** The Totonacan languages (a.k.a. Totonac–Tepehua languages) are a family of closely related languages spoken by approximately 290,000 Totonac (approx. 280,000) and Tepehua (approx. 10,000) people in the states of Veracruz, Puebla, and Hidalgo in Mexico. At the time of the Spanish conquest Totonacan languages were spoken all along the gulf coast of Mexico (Reid & Bishop 1974). During the colonial period Totonacan languages were occasionally written and at least one grammar was produced (Anonymous 1990). In the 20th century the number of speakers of most varieties have dwindled as indigenous identity increasingly became stigmatized encouraging speakers to adopt Spanish as their main language (Lam 2009). The Totonacan languages have only recently been compared to other families on the basis of historical-comparative linguistics, though they share numerous areal features with other languages of the Mesoamerican Linguistic Area, such as the Mayan languages and Nahuatl. Recent work suggests a possible genetic link to the Mixe–Zoque language family (Brown et al. 2011), although this has yet to be firmly established (Wiki).

**[TORRES STRAIT CREOLE]** Torres Strait Creole (also Torres Strait Pidgin, Yumplatok, Torres Strait Broken/Broken, Cape York Creole, Lockhart Creole, Papuan Pidgin English, Broken English, Broken/Broken, Blaikman, Big Thap) is an English-based creole language spoken on several Torres Strait Islands (Queensland, Australia), Northern Cape York and South-Western Coastal Papua. It has approximately 25000 mother-tongue and bi/tri-lingual speakers, as well as several second/third-language speakers. It is widely used as a language of trade and commerce. It has six main dialects: Papuan, Western-Central, TI, Malay, Eastern, and Cape York (Wiki).

**[TORWALI]** Torwali (Urdu: ٽوروال), or Turwali, is a Dardic language spoken in Kohistan and Swat districts of the Khyber Pakhtunkhwa Province of Pakistan. The language is indigenous to the Torwali people who live in scattered hamlets in the mountainous upper reaches of the Swat valley, above the Pashto-speaking town of Madyan up to the Gawri-speaking town of Kalam. There are two main dialects of Torwali: Bahrain and Chail (Wiki).

Part V: Vocabulary and Indexes: Torwali-English, pp. 134-185; indexes "of words in other languages quoted in the foregoing vocabulary," pp. 186-216.

"When Sir Aurel Stein, in the course of his inquiries regarding the track of Alexander the Great in his march to the Indus, visited the valley of Torwal, he recorded the three folktales and the list of typical words and sentences that form the basis of the present work... Very little has hitherto been known about Torwali, the language of Torwal... Torwali is one of a number of languages generally grouped together under the name of 'Kohistani,' as being spoken in the Panjkora, Swat, and Indus Kohistans lying to the north of the Peshawar and Hazara Districts of British India. Other members of the group as Garwi... and Maiya..." (Introduction, Grierson). "Torwal, where the Dardic tongue recorded in the stories ... is spoken, comprises that alpine portion of the valley of the Swat River which extends from Kalam down to the large village of Churrai. It was visited by me as the first European in April, 1926... No close estimate of the population of Torwal was obtainable, but it can scarcely exceed 2,000 households in all, including semi-nomadic Gujars and a few small settlements of Chitrali immigrants in Chihil-dara, Gurunai, and higher up" (Part I, Stein). From the library of Carleton T. Hodge. First extensive vocabulary of this language.

[**TRANS-NEW GUINEA LANGUAGES: POLYGLOT**] Trans–New Guinea (TNG) is an extensive family of Papuan languages spoken in New Guinea and neighboring islands, perhaps the third-largest language family in the world by number of languages. The core of the family is considered to be established, but its boundaries and overall membership are uncertain. Most TNG languages are spoken by only a few thousand people, with only four (Melpa, Enga, Western Dani, and Ekari) being spoken by more than 100,000. The most populous language outside of mainland New Guinea is Makasai on Timor, with 70,000.

The island of New Guinea is divided politically into roughly equal halves across a north-south line: The western portion of the island located west of 141°E longitude (except for a small section of territory to the east of the Fly River which belongs to Papua New Guinea) was formerly a Dutch colony, part of the Dutch East Indies. After the Dutch New Guinea Dispute it is now two Indonesian provinces: 1) West Papua with Manokwari as its capital; 2) Papua with the city of Jayapura as its capital. The eastern part forms the mainland of Papua New Guinea, which has been an independent country since 1975.

The languages of Papua New Guinea today number over 850. These languages are spoken by the inhabited tribal groups of Papua New Guinea making it the most linguistically diverse place on earth. Its official languages are Tok Pisin, English, Hiri Motu and Papua New Guinean Sign Language. Tok Pisin, an English-based creole, is the most widely spoken, serving as the country's lingua franca. Papua New Guinean Sign Language became the 4th official language in May 2015, as it is spoken by the deaf population all over the country (Wiki).

"As Mission work is now being actively pursued in [British New Guinea], these lists will show what languages may most profitably be studied by those who are engaged in the work... It is also hoped that the Vocabulary may be of some service to the philologist, as presenting ... the results of our present knowledge of the New Guinea languages. It does not seem likely that any of the Papuan languages will be used as a permanent medium of intercourse, and unless some interest is taken in them before it is too late, they will probably become, like the languages of Australia, mere philological curiosities... The accompanying map... was specially drawn to illustrate the British New Guinea languages" (Preface, Robert Needham Cust). "The fifty-two dialects here shown [1-23 Melanesian; 24-30 Melano-Papuan; 31-52 Papuan] fall practically into twenty-five languages" (Introduction).

“The limited material available [vocabularies], the unreliability of much of it, especially the imperfect phonetic renderings, have made my task very difficult” (Preface).

"The Kiwaian languages form a branch of the Trans–New Guinea language family of New Guinea. They are a dialect cluster of half a dozen closely related languages. They are grammatically divergent from other Trans–New Guinea languages, and typically have singular, dual, trial, and plural pronouns" (Wiki).

Such an arrangement is to the advantage of a researcher or student in a particular language. The linguistic researcher, however, interested in comparative studies will find it consuming and bothersome to arrange the words in comparable tables. For this reason, the present compiler decided to re-arrange the data in comparable columns for each lexical item on one separate page. This should lessen the burden of arranging the items independently by individual researchers" (Introduction).

[**TRINIDADIAN CREOLE ENGLISH**] Trinidadian English Creole is a creole language commonly spoken throughout Trinidad. It is distinct from Tobagonian Creole – particularly at the basilectal level– and from other Lesser Antillean English creoles. English is the country's official language (the national standard variety is Trinidadian English), but the main spoken languages are Trinidadian English Creole and Tobagonian English Creole. Both creoles contain elements from a variety of African languages. Trinidadian English Creole is also influenced by French and French Creole (Patois) (Wiki).

"Trinidad's language, while Britannic in essence, is thoroughly marinated with the elusive Spanish gold, French assaults, and a History rich from the cross-mingling of the sweat of slaves, with the vicissitudes of aristocracy. Entire villages still use the Patois, (broken French) and some Spanish-speaking territories not only still exist, but strongly flourish.... A sizeable portion of its inhabitants are of East Indian heritage. Arabic, Chinese and other exotic tongues... are also well represented.... Much of this copious pot-pouri is derived from an interchange with Tobago, the sister isle" (Foreword).

[**TRIO**] The Tiriyó language (also known as Trio, autonym tarëno), is spoken by approximately 2,000 people living in several villages on both sides of the Brazil-

Suriname border in the northern Amazon basin. It is a relatively healthy language, learned by all children as their mother tongue and actively used in all areas of life by its speakers. Most of the Tirió (there are no precise numbers, but impressionistic observation would suggest more than half are monolingual speakers. Of course, the long-term survival of their language, as is the case for almost all native South American languages, remains an open question (Wiki).

[**TRIQUE LANGUAGES**] The Triqui /'tri:ki:/, or Trique, languages are Oto-Manguan languages of Mexico spoken by the Trique people of the state of Oaxaca and the state of Baja California (due to recent population movements). They belong to the Mixtecan branch together with the Mixtec languages and Cuicatec. Ethnologue lists three major varieties:

Triqui de Copala spoken by 15,000 people (1990 census) in San Juan Copala, Oaxaca (and recently due to migrations in the San Quintín valley, Baja California).

Triqui de San Andrés Chicahuaxtla spoken by 6,000 people in San Andrés Chicahuaxtla, Oaxaca.

Triqui de San Martín Itunyoso spoken by 2,000 people (1983 survey) in San Martín Itunyoso, Oaxaca (Wiki).

[**TRUMAI**] Trumai is a language spoken by the indigenous community of the same name located in the Xingu reserve along the Upper Xingu River in central Brazil. Murphy and Quain reported that there were only 25 people remaining in the Trumai community. Fortunately, this has since increased to 94 as of 1997, of which 51 people spoke the Trumai language. In the *International Encyclopedia of Linguistics*, Grimes observes that there are 78 speakers as of 2003. Due to the popularity of speaking Portuguese among the local population, Trumai is considered an extremely endangered

language because the children are not learning to speak it as a first language. In the preface to her thesis "A Reference Grammar of Trumai", Guirardello states that Monod-Becquelin was the first person to conduct descriptive studies on the Trumai language [see below] (Wiki).

**1975:** [IUW] *La pratique linguistique des Indiens Trumai: Haut-Xingu, Mato Grosso, Brésil*, by Aurore Monod-Becquelin. Paris: SELAF, 1975- v.: ill.; 25 cm. Vol. 1: original yellows wrappers, lettered and illustrated in black; Vol. 2: library binding, incorporating original yellow front wrapper, lettered in black. Langues et civilisations à tradition orale 9, etc. Vol. 2 has on cover: Les aventures de soleil et lune, et d'autres mythes trumai. Summary in French, English, German, Portuguese, Russian, and Spanish. Includes bibliographies and indexes. Vol. 2: Trumai-Portuguese-Latin lists of mammals, birds, fish, lizards, toads, frogs, snakes, and plants, pp. 19-37.

"There being no previous linguistic publications concerning the Trumai, it seemed advisable to include a sketch of the information available concerning the related languages as well as Trumai. This work is therefore composed of two parts: one dealing with the prevalent multilingualism and the other concerning the Trumai language in particular" (English resume).

[TSETSAUT] The Tsetsaut language is an extinct Athabaskan language formerly spoken by the now-extinct Tsetsaut in the Behm and Portland Canal area of Southeast Alaska and northwestern British Columbia. Virtually everything known of the language comes from the limited material recorded by Franz Boas in 1894 from two Tsetsaut slaves of the Nisga'a, which is enough to establish that Tsetsaut formed its own branch of Athabaskan. It is not known precisely when the language became extinct. One speaker was still alive in 1927. The Nisga'a name for the Tsetsaut people is "Jits'aawit". The Tsetsaut referred to themselves as the Wetal. The English name Tsetsaut is an anglicization of [ts'əts'əut], "those of the interior", used by the Gitksan and Nisga'a to refer to the Athabaskan-speaking people to the north and east of them, including not only the Tsetsaut but some Tahltan and Sekani (Wiki).

Ethnologue does not list this extinct language.

**1924:** [LILLYbm] "Ts'ets'əut, an Athapaskan language from Portland Canal, British Columbia," by Franz Boas & Pliny E. Goddard, in: *International Journal of American Linguistics*, New York, Vol. 3, No. 1 (July 1924), pp. [1]-35. Includes English-Tsetsaut vocabulary arranged by grammatical categories, pp. 4-33, with annotations comparing the language to other Athapaskan languages. First published vocabulary of Tsetsaut.

"The material contained in the following pages was collected in 1894.... Unfortunately my principal informant, Levi, was exceedingly difficult to manage, and I did not succeed in making him understand that I desired to have connected sentences.... Furthermore the work was conducted through a Nass River interpreter, to whom Levi translated his words into Nass, and who in turn translated these words to me into Chinook Jargon" (p. [1]).

Also included in this issue: "Vocabulary of the Athapascan Tribe of Nicola Valley, British Columbia," by Franz Boas, pp. 36-38. Includes 30 words, Nicola Valley [Nicola]-English, reprinted from the author's report on the Northwestern Tribes of Canada, Ipswich Meeting of the British Association for the Advancement of Science, 1895, pp. 551 et seq.

Also included in this issue: "Vocabulary of an Athapascan Dialect of the State of Washington," by Franz Boas & Pliny E. Goddard, pp. 39-45. Includes 322-word English-Kwalhiokwa [Kwalhioqua-Clatskanie] vocabulary, pp. 41-45.

"The Chinook called the Athapascan tribe on the Willapa River Tkulxiyogwa'ike which corresponds to the form Kwalhioqua given by Hale and Anderson" (p. 41).

[**TSHANGLA**] Tshangla (/tsʰaŋla/), also called Sharchop, is a Sino-Tibetan language of the Bodish branch closely related to the Tibetic languages and much of its vocabulary derives from Classical Tibetan. Tshangla is primarily spoken in Eastern Bhutan and acts as a lingua franca in the country particularly among Sharchop/Tshangla communities, it is also spoken in Arunachal Pradesh, India and Tibet. Tshangla is the principal pre-Tibetan (pre-Dzongkha) language of Bhutan. Tshangla dialects represent a continuum centered around the town of Trashigang, whose dialect is considered by Tshangla speakers to be the prestige dialect. Differences between dialects do not prevent mutual intelligibility, and many loanwords have come through Classical Tibetan (Chöke). In Arunachal Pradesh, Tshangla is spoken in the Dirang area of West Kameng. The dialect there, called "Central Monpa", is spoken by some 6,000 people [see **1968** below]. More speakers of Tshangla dialects live in Kathmandu, Darjeeling and Assam. In Bhutan, Tshangla is virtually identical to Cāngluò (Chinese: 仓洛) of southeastern Tibet, also called "Mòtuō (Bomê) Monpa". The Bomê County region of Tibet, formerly known as Padma-bkod or Pemako, contains remnants of these Tshangla communities separated by hundreds of miles (Wiki).

Ethnologue: tsj. Alternate Names: Menba, Monpa, Sangla, Sarchapkhka, Shachobiikha, Shachopkha, Sharchagpakha, Sharchhokpa, Tsangla, Tshalingpa.

**1968:** [IUW] *An introduction to Central Monpa* [by] K. Das Gupta. Shillong, North-East Frontier Agency, 1968 [i.e. 1971] vi, 167 p. 22 cm. Part II: Vocabulary [thematically-arranged], English-Central Monpa [Tshangla], in both Roman and Monpa script, pp. [65]-133; Part III: Sentences (thematically-arranged), Central Monpa [Tshangla]-English, pp. 138-166. Comparative word lists of [the villages of] Dirang, Senge and Jang (23 words), p. 167. "DIPR. 11/800."

"The material of this book was collected in the Dirang and Sangti vilages. I am indebted to the people of these villages for assisting me in the collection of materials" (Acknowledgement).

"Monpa, also spelt Monba, is the westernmost of the Bodic languages of N. E. F. A. and is the speech of about twenty-one thousand souls. It occupies the western half of the Kament district, between the allied speeches of Bhutan in the west and Miji and Sherdukpen in the east and the Himalayas in the north and the Inner Line of the south.... Central Monpa, spoken by about six thousand souls, forms the subject of this book. The area of this dialect is surrounded by Miji and Dafla in the east, Bhutanese in the west,

Northern Monpa [Tawang Monpa] in the north, Sherdukpen and Southern Monpa [Kalaktang Monpa] in the south" (Introduction).

[**TSIMANÉ**] Chimané (Tsimané) is a South American language. Some dialects are known as Mosetén (Mosetén of Santa Ana, Mosetén of Covendo). Chimane is a language of the western Bolivian lowlands spoken by the Tsimane peoples along the Beni River and the region around San Borja in the Department of Beni (Bolivia). Sakel (2004) [3] classifies them as two languages for a number of reasons, yet some of the variants of the language are mutually intelligible and they reportedly have no trouble communicating (Ethnologue 16) and were evidently a single language separated recently through cultural contact (Campbell 2000) (Wiki).

Ethnologue: cas. Alternate Names: Chimané, Mosetén, Moseteno.

**1917:** [LILLYbm] *Moseteno Vocabulary and Treatises*, by Benigno Bibolotti. Evanston and Chicago: Northwestern University, 1917. Original brown half-cloth and tan cloth over boards, lettered in gold ("Northwestern University Library" at base of spine). 142 pp. First edition. Not in Zaubmüller. "From an Unpublished Manuscript in possession of Northwestern University Library." Includes several thematically-arranged Moseteno-English vocabularies, as well as reproducing, pp. 3-102, the extensive Spanish-Moseteno vocabulary of Bibolotti.

"Dr. Schuler had supplied an English translation of the whole vocabulary, but it did not seem to me that such a translation added anything of value [sic]. I have, therefore, omitted it... Dr. Schuler had undertaken to correct many of Bibolotti's errors and supply omissions...[C]hanges were made to the printed proof needed to make the reproduction of the manuscript correspond to the original" (Walter Lichtenstein). The vocabulary is of "a relatively little studied Bolivian aboriginal idiom spoken by Indians who have almost vanished [1917]"(Rudolf Schuler). The manuscript is dated Covendo, May 20, 1868.

[**TSIMSHIAN**] The Tsimshianic languages are a family of languages spoken in northwestern British Columbia and in Southeast Alaska on Annette Island and Ketchikan. About 2,170 people of the ethnic Tsimshian /'simʃiən/ population in Canada still speak a Tsimshian language; about 50 of the 1,300 Tsimshian people living in Alaska still speak Coast Tsimshian. Tsimshianic languages are considered by most linguists to be an isolate group of languages, with four main languages or lects: Coast Tsimshian, Southern Tsimshian, Nisga'a, and Gitksan. Nisga'a and Gitksan are very closely related and are usually considered dialects of the same language by linguists. However, speakers from both groups consider themselves ethnically separate from each other and from the Tsimshian and thus consider Nisga'a and Gitksan to be separate languages. Coast and Southern Tsimshian are also often regarded as dialects of the same language. As of 2013, Tsimshian courses are available at the University of Alaska Southeast (Wiki).

Ethnologue lists 3 languages under the Tsimshian family: 1) Tsimshian: tsi. Alternate names: Chimmezyan, Maritime Tsimshianic, Sm'algyax, Tsimpshean, Zimshian; 2) Gitksan [git]; and 3) Nisga'a [ncg]. Ethnologue considers Southern Tsimshian (Old Klemtu, Sguuxs, Skiixs), and Coast Tsimshian (Sm'algyax), as dialects of Tsimshian (tsi).

**1978:** [LILLYbm] *A practical dictionary of the Coast Tsimshian language*, by John Asher Dunn. Ottawa: National Museums of Canada, 1978. Original white wrappers, lettered and illustrated in black. Pp. [I] i-x xi, 1-155 156. First edition. Series: National Museum of Man Mercury Series. Canadian Ethnology Service Paper No. 42. Includes Tsimshian-English, pp. 1-118, with English index, pp. 119-144. Second copy: IUW.

"This dictionary represents a contemporary complement to the Tsimshian work of Franz Boas (1912) and Amelia Susman (1940) since it was compiled in the period from 1968 to 1977. Likewise it represents a geographic complement to the Tsimshian materials because it contains data from the Katkatla and Hartley Bay. The earlier research had been conducted in Metlakatla and Port Simpson" (Abstract).

**1995:** [LILLYbm] *Sm'algyax: A Reference Dictionary and Grammar for the Coast Tsimshian Language*, compiled and edited by John Asher Dunn. Seattle: University of Washington Press, 1995. Original stiff black and white wrappers, lettered in black. Pp. 145, 79. New combined edition of two volumes first published in 1978 and 1979. Includes Coast Tsimshian [a dialect of Tsimshian]-English and an English index.

[**TSONGA**] Tsonga (Xitsonga) is a southern African Bantu language spoken by the Tsonga people. It was officially created in 1875 at the Valdezia Mission Station and Elim/Waterval/ Shirley Mission Stations by two Swiss missionaries, Reverend Paul Berthoud and Reverend Ernest Creux. Prior to the arrival of the Missionaries at Valdezia, the Tsonga people in that region that includes, Bungeni, Chavani, Mbhokota, Shirley, Riverplaats, Elim, Waterval, Nwaxinyamani and adjacent areas did not speak one language, but rather, they spoke a diverse of east coast dialects all related to modern Tsonga language. The Swiss Missionaries combined all these east coast dialects, such as Xigwamba, XiNkuna, Xihlengwe, XiTembe, XiValoyi, XiNyembani, Xitswa, XiRonga, and XiChopi to form a new unified superlanguage which they called 'Thonga', but they later modified it and renamed Xitsonga or simply Tsonga. The Swiss Missionaries refused to recognise Tswa and Ronga as independent languages from Xitsonga because, according to them, Tswa and Ronga are 99% related to Xitsonga. At Valdezia Mission Station and the Elim Mission Station, Tswa and Ronga were swallowed, incorporated and disappeared into Xitsonga. But in Mozambique, Tswa, Ronga and Xitsonga continue to exist as independent languages. The only differences between Tswa, Ronga and Xitsonga in Mozambique is that Ronga and Tswa are highly influenced by the Portuguese language as Maputo and Matola are the homelands of the Ronga and Tswa people. While the homelands of Xitsonga speakers in Mozambique starts 75 km north of Maputo, Xitsonga, Tswa and Ronga are 99% similar to one another, and it is difficult for a non-Xitsonga speaker to see a difference between the three dialects (Wiki).

The first English dictionary of the language was published by Chatelain in 1909 (see above).

"The speech described in this work is thought to be the most archaic of the Bantu languages.... It comprises a number of homogeneous dialects easily recognized at the first hearing by the fact that all of them, and they alone in the world, use the typical expression *bantu botatwe* for 'three people.' For this reason it may be called the *Bantu Botatwe Language*" (Foreword).

[**TSOTSITAAL LANGUAGES**] Tsotsitaals are a variety of mixed languages mainly spoken in the townships of Gauteng province, such as Soweto, but also in other agglomerations all over South Africa. Tsotsi is a Sesotho slang word for a "thug" or "robber" (possibly from the verb "ho tsotsa" "to sharpen" — whose meaning has been modified in modern times to include "to con"; or from the tsetse fly, as the language was first known as Flytaal, although "flaai" also means cool or street smart) and taal is the Afrikaans word for "language". A tsotsitaal is built over the grammar of one or several languages, in which terms from other languages or specific terms created by the community of speakers are added. It is a permanent work of language-mix, language-switch, and terms-coining. From the original Tsotsitaal, the noun tsotsitaal came to refer to any gang or street language in South Africa. However, the specific variety behind the term would depend on the languages actually present in the specific urban environment where one tsotsitaal appears. The most important tsotsitaal nowadays in South Africa is the one from the township of Soweto, the largest township and the place which shows the most diverse linguistic setting in the country (Wiki).

Ethnologue lists Tsotsitaal as an alternate name for Flaaitaal (an early manifestation) and present-day Camtho: cmt. Alternate Names: Iscamtho, Isicamtho, Tsotsitaal.

**2003:** see under **CAMTHO**.

[**TSOU**] Tsou is a divergent Austronesian language spoken by the Tsou people of Taiwan. Tsou is a threatened language; however, this status is uncertain. The speakers are located in the west central mountains southeast of Chiayi, Alishan area in Taiwan. The language is not written, so it can only be passed by folk songs and folk tales (Wiki).

**1941:** see under **AUSTRONESIAN LANGUAGES: POLYGLOT**.

[**TSWA**] Tswa (Xitswa) is a South-Eastern Bantu language in Southern Mozambique. Its closest relatives are Ronga and Tsonga, the three forming the Tswa–Ronga family of languages. Tswa is mainly spoken in the rural areas west of Inhambane. Its largest dialect, Hlengwe, extends westwards to Southern Zimbabwe; Maho (2009) considers this to be a distinct language. The other principal dialects are Dzibi (Dzivi) and Dzonga. According to some estimates, there are just over one million BaTswa, but not all can speak the Tswa language. Many Mozambicans, including census officials, often consider it a dialect of Tsonga (Shangaan) (Wiki),

[**TSWANA**] The Tswana language, Setswana or Sichuan, is a language spoken in southern Africa by about five million people. It is a Bantu language belonging to the Niger–Congo language family within the Sotho languages branch of Zone S (S.30), and is closely related to the Northern- and Southern Sotho languages, as well as the Kgalagadi language and the Lozi language. Tswana is an official language and lingua franca of Botswana. The majority of Tswana speakers are found in the north of South Africa, where four million people speak the language, and where an urbanised variety known as Pretoria Sotho is the principal language of that city. Although Tswana language is significantly spoken in South Africa and Botswana, a small number of speakers are also found in Zimbabwe and Namibia, where respectively an unknown number of people and about 10,000 people speak the language (Wiki).

This is the first dictionary of Tswana in any language. *Second copy:* in later brown polished calf and brown cloth over boards, lettered and decorated in gold.

"This little work was compiled with a view to my own use alone. Being unable to learn words from merely hearing them spoken, and in the absence of a Secwana dictionary, it was necessary for me to begin making a vocabulary upon my introduction to the language. The idea of publishing never occurred to me till some of my brethren who joined the mission after I did, and to whom the vocabularies in their manuscript form had been useful, requested me to print them.... This is but a humble commencement of a work rendered increasingly important by the opening up of Becwana Land to European enterprise, and that commingling of the white and black races which will, in all probability, take place in the near future. My hope is that this work will be useful both in enabling Europeans to obtain a better knowledge of their coloured neighbours, and in helping the Becwana to profit by the superior knowledge of the white man" (Preface).

"The Secwana language is that used by the Becwana people. The Secwana nation is divided into several tribes, whose language is the same, with the exception of slight tribal variations. The dialect used in the vocabulary is for the most part that of the Setihapiñ tribe in South Becwana Land" (p. [<sup>2</sup>iii]).

"After a lapse of nearly twenty years, a new edition of the Secwana vocabulary ought to be larger and more correct than the first edition. It will, I think, be found that this is the case, though there will still be defects.... As the book is bulky, and the demand for it will be limited, I fear the price will be comparatively high. No more than bare cost,

however, will be charged. The Missionary Society will be satisfied if the outlay is refunded by sales some day. The compiler has done the work as part of his duties" (from the Preface, signed John Brown, and dated Taungs, March, 1895). "The untimely death of my friend and colleague Frank Stimson occurred shortly before the final draft of this Dictionary was completed... There may be some who question the value of this unique and tremendous effort. Of what use are the often debatable facts relating to the dying language of a subjected people? If one is a humanist, it may be sufficient to say that here were a people who loved life and Freudian enough to seek for unknown lands through uncharted seas in crowded ships. They developed a richly satisfying way of life such as the world may never see again. Surely it is little enough for us, the descendants of the destroyers of their civilization, to record a part of their heritage for posterity!... This truly ethno-linguistic dictionary contains a great store of data which will aid in elucidating the original Polynesian way of life... In all the Polynesian area, the Tuamotus stand in greatest need of ethno-linguistic study" (Preface).

"The only extensive list of Tuamotuan words published prior to the present compilation appeared in the *Journal of the Polynesian Society*, Volume 2 *et seq.*, with an introduction by Edward Tregear, but without any acknowledgment of source or authorship [cf. above].. Unfortunately, I find this vocabulary unreliable - particularly in

respect of definitions; and errors of orthography are numerous. Nevertheless, the list has usefulness in comparative studies for those who have a working knowledge of some other Polynesian dialect, provided they are alert to the danger of unduly relying upon it... In preparation for work in the field I began studying Tuamotuan in 1929... Perhaps this dictionary, in its dry and pedagogic way, may preserve a little of the life and outlook, if not of the proud songs and home-told tales, of these immemorial wanderers - bold seakings seeking the rising sun - over the wakeless Pacific toward unguessed horizons. I hope so" (Introduction, Frank Stimson).

[**TULU**] Tulu (Tulu: ತುಳು ಭಾಷೆ Tulu bāse ['tulu 'bɔ:sæ]) is a language [of India], one among the five major Dravidian languages spoken by around 2 million native speakers mainly in the south west part of the Indian state of Karnataka and in the Kasaragod district of Kerala which is collectively known as Tulu Nadu. It belongs to the Dravidian family of languages. Robert Caldwell, in his pioneering work *A Comparative Grammar of the Dravidian or South-Indian family of languages*, called this language "peculiar and very interesting". According to him, "Tulu is one of the most highly developed languages of the Dravidian family. It looks as if it had been cultivated for its own sake." Non-native speakers such as the Konkani-speaking Mangalorean Catholics, Goud Saraswath Brahmins, Karhade Brahmins, Havyaka Brahmins and Daivajnas, as well as the Beary people in Tulu Nadu are generally well-versed in the language (Wiki).

[**TUMBUKA**] The Tumbuka language is a Bantu language which is spoken in the Northern Region of Malawi and also in the Lundazi district of Zambia. It is also known as Chitumbuka or Citumbuka — the chi- prefix in front of Tumbuka means "the language of", and is understood in this case to mean "the language of (the Tumbuka people)". Tumbuka belongs to the same language group (Guthrie Zone N) as Chewa and Sena. The World Almanac (1998) estimates that there are approximately 2,000,000 Tumbuka speakers, though other sources estimate a much smaller number. The majority of Tumbuka speakers are said to live in Malawi. Tumbuka is the most widely spoken of the languages of Northern Malawi, especially in the Rumphu, Mzuzu, and Mzimba districts. The Tumbuka language suffered during the rule of President Hastings Kamuzu Banda, since in 1968 as a result of his one-nation, one-language policy it lost its status as an official language in Malawi. As a result, Tumbuka was removed from the school curriculum, the national radio, and the print media. With the advent of multi-party democracy in 1994, Tumbuka programmes were started again on the radio, but the number of books and other publications in Tumbuka remains low (Wiki).

"Isolation from the world and their life in deep forests has kept the indigenous peoples of New Guinea at the lowest level of the village and even individual families.... The finest distillate of all cultures, language, has only passed beyond the lowest level of

the individual hearths here and there, and only in the weakest of forms.... On an expedition [in 1910 as part of the German continent of the German-Dutch expedition in Kaiser-Wilhelm land], on which a rapid progress toward the interior was required, forbidding any but the briefest periods of necessary rest, the constant variation in language in the areas passed through proved an insurmountable barrier to linguistic research. At first I believed I could overcome this by means of personal contact with willing natives. A young Papuan from Monumbo and a Melanesian from Tumleo, former pupils at the Catholic Mission of the Holy Ghost labored in vain, however, to teach me related words to their own languages in those of the tribes of the areas we passed through; we never progressed beyond the crudest communications based on gestures and facial expressions. But the openness of the young Melanesian tempted me to learn his own language better, which I had come to know in part through out mutual attempts at interpreting. This served as a spice to my hours of rest over the next eight months of my travels through the forests and along the rivers. What I learned that's new, or saw in a perspective differing from that of my precursors, is given here" (Introduction, tr: BM).

[**TUMZABT**] Mozabite, or Tunzabt, is a dialect of the Berber language spoken by the Mozabites, an Ibadi group inhabiting the seven cities of the M'zab natural region in the northern Saharan Algeria. It is also spoken by small numbers of Mozabite emigrants in other local cities and elsewhere. Mozabite is one of the Mzab–Wargla languages, a dialect cluster of the Zenati languages. [**TUNICA**] The Tunica (or Tonica, or less common form Yuron) language was a language isolate spoken in the Central and Lower Mississippi Valley in the United States by Native American Tunica peoples. There are no known speakers of the Tunica language remaining. When the last known fluent speaker Sesostrie Youchigant died in the mid-20th century, the language became extinct. Linguist Mary Haas worked with Youchigant to describe what he remembered of the language, and the description was published in *A Grammar of the Tunica Language* in 1941. This was followed by *Tunica Texts* in 1950 and *Tunica Dictionary* in 1953 [see below]. By the 17th century, the people had suffered a high rate of fatalities due to Eurasian infectious diseases, warfare and social disruption. The reduced Tunica tribe lived close to the Ofo and Avoyelles tribes in present-day Louisiana. They communicated by the Mobilian Jargon or French. Due to this circumstance of small population and use of a jargon, the linguist Haas noted that the eventual deterioration of the Tunica language was inevitable.

[**TUPI**] Old Tupi or Classical Tupi is an extinct Tupian language which was spoken by the native Tupi people of Brazil, mostly those who lived close to the sea. It belongs to the Tupi-Guarani language family, and has a written history spanning the 16th, 17th and early 18th centuries. In the early colonial period Tupi was used as a lingua franca throughout Brazil by Europeans as well as Amerindians and had literary usage, but it was

later suppressed almost to extinction, leaving only one modern descendant with an appreciable number of speakers, Nheengatu. The names Old Tupi or Classical Tupi are used for the language in English and by modern scholars (it is referred to as *tupi antigo* in Portuguese), but native speakers called it variously *ñeengatú* "the good language", *ñeendyba* "common language", *abáñeenga* "human language", in Old Tupi, or *língua geral* "general language", *língua geral amazônica* "Amazonian general language", *língua brasílica* "Brazilian language", in Portuguese.

**[TURKISH—pre-1800]** Turkish (About this sound Türkçe (help·info)), also referred to as Istanbul Turkish, is the most widely spoken of the Turkic languages, with around 10–15 million native speakers in Southeast Europe (mostly in East and Western Thrace) and

60–65 million native speakers in Western Asia (mostly in Anatolia). Outside of Turkey, significant smaller groups of speakers exist in Germany, Bulgaria, Macedonia, Northern Cyprus (only recognized by Turkey), Greece, the Caucasus, and other parts of Europe and Central Asia. To the west, the influence of Ottoman Turkish—the variety of the Turkish language that was used as the administrative and literary language of the Ottoman Empire—spread as the Ottoman Empire expanded. [TUVALUAN] Tuvaluan /tu:və'lu:ən/, often called Tuvalu, is a Polynesian language of or closely related to the Ellicean group spoken in Tuvalu. It is more or less distantly related to all other Polynesian languages, such as Hawaiian, Maori, Tahitian, Samoan, and Tongan, and most closely related to the languages spoken on the Polynesian Outliers in Micronesia and Northern and Central Melanesia. Tuvaluan has borrowed considerably from Samoan, the language of Christian missionaries in the late 19th and early 20th centuries. The population of Tuvalu is approximately 10,837 people (2012 Population & Housing Census Preliminary Analytical Report). There are estimated to be more than 13,000 Tuvaluan speakers worldwide. In 2015 it was estimated that more than 3,500 Tuvaluans live in New Zealand, with about half that number born in New Zealand and 65 percent of the Tuvaluan community in New Zealand is able to speak Tuvaluan.

[TWANA] The Twana language, also known as Skokomish from one of the tribes that spoke it, belongs to the Salishan family of Native American languages. It is believed by some elders within the Skokomish community (such as Bruce Subiyay Miller) that the language branched off from Lushootseed (dxwəlšucid) because of the region-wide tradition of not speaking the name of someone who died for a year after their death. Substitute words were found in their place and often became normalizing in the community, generating differences from one community to the next. Subiyay speculated that this process increased the drift rate between languages and separated Twana firmly

from xwəłšucid (Lushootseed). The last fluent speaker died in 1980. The name "Skokomish" comes from the Twana sq<sup>w</sup>uq<sup>w</sup>óʔbəš, also spelled sqWuqWu'b3sH, and meaning "river people" or "people of the river" (Wiki).

[**TZELTAL**] Tzeltal or Ts'eltal /'tʰɛltɑ:l/ is a Mayan language spoken in the Mexican state of Chiapas, mostly in the municipalities of Ocosingo, Altamirano, Huixtán, Tenejapa, Yajalón, Chanal, Sitalá, Amatenango del Valle, Socoltenango, Villa las Rosas, Chilón, San Juan Cancun, San Cristóbal de las Casas and Oxchuc. Tzeltal is one of many Mayan languages spoken near this eastern region of Chiapas, including Tzotzil, Ch'ol, and Tojolab'al, among others. There is also a small Tzeltal diaspora in other parts of Mexico and the United States, primarily as a result of unfavorable economic conditions in Chiapas. It is a living language with some 371,730 speakers as of 2005, including approximately 50,000 monolinguals (Wiki).

[**TZOTZIL**] Tzotzil /'tʰsoʊtsil/ (native name: Bats'i k'op [bats'i k'op<sup>h</sup>]) is a Maya language spoken by the indigenous Tzotzil Maya people in the Mexican state of Chiapas. Most speakers are bilingual in Spanish as a second language. In Central Chiapas, some primary schools and a secondary school are taught in Tzotzil. Tzeltal is the most closely related language to Tzotzil and together they form a Tzeltalan sub-branch of the Mayan language family. Tzeltal, Tzotzil and Ch'ol are the most widely spoken languages in Chiapas. In 1975, the Smithsonian Institution produced a dictionary of Tzotzil, containing some 30,000 Tzotzil-English entries, and half that number of English-Tzotzil entries, the most comprehensive resource on Tzotzil vocabulary to that date [see below]. Tzotzil word-lists and grammars date back to the late 19th century, most notably in Otto Stoll's *Zur Ethnographie der Republik Guatemala* (1884) [see below] (Wiki).

"This dictionary of Tzotzil (Mayan) vocabulary from the town of Zanacantán, Chiapas, Mexico, was edited by the author over a period of nine years. The original manuscript, compiled by an anonymous Dominican friar, probably at the close of the 16<sup>th</sup> century, disappeared during the Mexican Revolution, but a manuscript copy of 351 pages survives. It was made around 1906 at the Behest of the Bishop of Chiapas... The approximately 11,000 Spanish-Tzotzil entries have been translated into English" (Abstract).

[**TZ'UTUJIL**] Tz'utujil /'tsu:təhi:l/ is a Mayan language spoken by the Tz'utujil people in the region to the south of Lake Atitlán in Guatemala. Tz'utujil is closely related to its larger neighbors, Kaqchikel and K'iche'. The 2002 census found 60,000 people speak Tz'utujil as their mother tongue. The two Tz'utujil dialects are Eastern and Western. The majority of the Tz'utujil people have Spanish as their second language, although many of the older people, or those in more remote locations do not. Many children also do not learn Spanish until they go to school around the age of five although more importance is now being placed upon it due to the influx of tourism into the region. As of 2012, the Community Library Rija'tzuul Na'ooj in San Juan La Laguna features story telling for children in Tz'utujil; bilingual children's books are also available. Spanish is used in written communication (Wiki),

Includes Tzutujil-Spanish, pp. <sup>2</sup>1-581, and Spanish-Tzutujil index, pp. 583-698. First dictionary of the language.

"Tzutujil is a Mayan language spoken by around 100,000 people in the districts of Solalá and Suchitepéquez in the midwestern region of Guatemala to the south of Lake Atitlán.... The work on the preparation of this dictionary started more than twenty years ago in 1973" (Introduction, tr: BM).

[**UAB METO**] Uab Meto is an Austronesian language spoken by Atoni people of West Timor. The language has a variant spoken in the East Timorese exclave of Oecussi-Ambeno, called Baikenu. Baikenu uses words derived from Portuguese, for example, obrigadu for "thank you", instead of the Indonesian terima kasih. A wordlist of 200 basic vocabulary items is available at the Austronesian Basic Vocabulary Database (Wiki).

[**UBYKH**] Ubykh or Ubyx is an extinct Northwest Caucasian language once spoken by the Ubykh people (who originally lived along the eastern coast of the Black Sea before migrating en masse to Turkey in the 1860s). The language's last native speaker, Tevfik Esenç, died in 1992. The Ubykh language is ergative and agglutinative, with polypersonal verbal agreement and a very large number of distinct consonants, but only two phonemically distinct vowels. With around eighty consonants it has one of the largest inventories of consonants in the world, the largest number for any language without clicks. The name Ubykh is derived from /wəbəx/, its name in the Abdzakh Adyghe language. It is known in linguistic literature by many names: variants of Ubykh, such as Ubikh, Ubih (Turkish) and Oubykh (French); and Pekhi (from Ubykh /tʰaxə/) and its Germanised variant Päkhy (Wiki).

Includes Ubychish [Ubykh]-German glossary, pp. 61-117, and German-Ubychish [Ubykh] index, pp. [118]-134. This is the first substantial vocabulary of the language.

"Ubykh belongs to the northwest-Caucasian languages... There are no longer any Ubykhi on Caucasian soil; in 1864 following the conquest of their homeland by the Russians, they all emigrated to Turkey, primarily to Anatolia. They live there scattered among the Turkic... population. Of their present-day circumstances little can be said, given the events and aftermath of the world war... With the exception of the brief wordlists of [James] Bell already mentioned [*Journal of a residence in Circassia during the years 1837, 1838, and 1839* (London: E. Moxon, 1840)], our knowledge of Ubykh is limited to one printed and one manuscript source. [The printed source has no vocabulary; the manuscript includes brief wordlists]... I call [my work] a sketch. I doubt if it will ever be possible to complete it fully. What Benediktsen already noted in 1898 I found fully confirmed in 1913; Ubykh is dying out as a language" (Foreword, tr: BM).

This is the first dictionary of this language.

"The present situation of Ubykh is hopeless. At the time of our two visits to Meszaros, Ubykh was still spoken in many of the villages in the Manyas region; today, the language is not known by more than twenty people.... The majority of these are over seventy years old" (Preface, tr: BM).

[**UDI**] The Udi language, spoken by the Udi people, is a member of the Lezgian branch of the Northeast Caucasian language family. It is believed an earlier form of it was the main language of Caucasian Albania, which stretched from south Dagestan to current day Azerbaijan. The Old Udi language is also called the Caucasian Albanian language and possibly corresponds to the "Gargarian" language identified by medieval Armenian historians. Modern Udi is known simply as Udi. The language is spoken by about 4,000 people in the Azerbaijani village of Nij in Qabala rayon, in Oghuz rayon, as well as in parts of the North Caucasus in Russia. It is also spoken by ethnic Udis living in the villages of Debetavan, Bagratashen, Ptghavan, and Haghtanak in Tavush Province of northeastern Armenia and in the village of Zinobiani (Oktomberi) in the Kvareli District of the Kakheti province of Georgia (Wiki).

[**UDMURT**] Udmurt (удмурт кыл, udmurt kyl) is a Uralic language, part of the Permic subgroup, spoken by the Udmurt natives of the Russian constituent republic of Udmurtia, where it is co-official with Russian. It is written using a Cyrillic alphabet, including five characters not used in the Russian alphabet: Ж/ж, Ѕ/ѕ, Ў/ў, and Ъ/ъ. Together with Komi and Komi-Permyak languages, it constitutes the Permic grouping. Among outsiders, it has traditionally been referred to by its Russian exonym, Votyak. Udmurt has borrowed vocabulary from the neighboring languages Tatar and Russian. Ethnologue estimates 550,000 native speakers (77%) in an ethnic population of 750,000 in the former USSR (1989 census) (Wiki).

[**ULWA**] Sumo (also known as Sumu) is the collective name for a group of Misumalpan languages spoken in Nicaragua and Honduras. Hale & Salamanca (2001) classify the Sumu languages into a northern Mayangna, composed of the Tawahka and Panamahka dialects, and southern Ulwa. Sumu specialist Ken Hale considers the differences between Ulwa and Mayangna in both vocabulary and morphology to be so considerable that he prefers to speak of Ulwa as a language distinct from the northern Sumu varieties (Wiki).

[**UNAMI**] Unami is an Algonquian language spoken by Lenape people in what was then the lower Hudson Valley area and New York Harbor area, New Jersey, Pennsylvania and Delaware, but later in Ontario and Oklahoma. It is one of the two Delaware languages, the other being Munsee. The last fluent speaker in the United States, Edward Thompson, of the Delaware Tribe of Indians, died on 31 August 2002. His sister Nora Thompson Dean (1907–1984) provided valuable information about the language to linguists and other scholars. Lenape is from /lɔna:p:e/, a word in the Unami dialect whose most literal translation into English would be "common person". The Lenape names for the areas they inhabited were Scheyichbi (i.e. New Jersey), which means "water's edge", and Lenapehoking, meaning "in the land of the Delaware Indians", although the latter is a term coined by the Unami speaker Nora Thompson Dean in 1984, to describe the ancient homeland of all Delaware Indians, both Unami and Munsee. The English named the river running through much of the traditional range of the Lenape after the first governor of the Jamestown Colony, Lord De La Warr, and consequently referred to the people who lived around the river as "Delaware Indians" (Wiki).

Series: Anthropological papers / Smithsonian Institution, Bureau of American Ethnology; no. 46. From Bureau of American Ethnology Bulletin 157 (1955). Contains facsimile plates of the Strachey vocabulary, with an introduction by John P. Harrington. Bibliography: p. 202.

"[T]he original manuscript by William Strachey, written probably about 1612, entitled "Historie of Travaile into Virginia Britannia...", terminated by the large vocabulary of the Virginia Indian language, the tongue spoken by Powhatan and Pocahontas, has lain at the Bodleian Library, Oxford, all these years and has never been published in full and correct form.... While in the capacity of Secretary of the Jamestown Colony, Strachey evidently interviewed one or more Indians and from them produced a vocabulary of some 800 words" (Introduction).

"The short [Sanhican] vocabulary... was first published in 1633 in Johannes de Laet's *Novus Orbis*... and is the first known recording of any Delaware dialect.... Some scholars believe that De Laet's Sahican vocabulary may represent the otherwise unrecorded Unalachtigo (or Northeastern Unami) dialect of Delaware, which some evidence indicates may have been spoken in central New Jersey, particularly in the Trenton area.... De Laet's original word-list appeared in Latin and [he] organized the terms by subject categories: parts of the human body, the sexes, the elements, animals, birds, fish and 'qualities.' For this edition, the Latin definitons have been translated into Egnlsih and the entire list alphabetized. A numerical table follows the vocabulary" (Preface to the 1999 edition). The Preface also information on the disputed authorship of the Delaware vocabulary list, and the editorial steps that have been taken to improve and correct the list in this edition.

**[UPPER UMPQUA]** Upper Umpqua is an extinct Athabaskan language formerly spoken along the south fork of the Umpqua River in west-central Oregon by Upper Umpqua (Etnemitane) people in the vicinity of modern Roseburg. It has been extinct for at least fifty years and little is known about it other than it belongs to the same Oregon Athabaskan cluster of Pacific Coast Athabaskan languages as the Lower Rogue River language, Upper Rogue River language and Chetco-Tolowa. The most important documentation of Upper Umpqua is the extensive vocabulary obtained by Horatio Hale in 1841 (published in Hale 1846) [see below]. Melville Jacobs and John P. Harrington were

able to collect fragmentary data from the last speakers as late as the 1940s (Golla 2011:70-72). Although known to early explorers and settlers as Umpqua, the language is now usually called Upper Umpqua to distinguish it from the unrelated Oregon Coast Penutian language Lower Umpqua (Kuitsh or Siuslaw) that was spoken closer to the coast in the same area (Wiki).

This extinct language is not listed in Ethnologue.

[**URA** (Vanuatu)] Ura is a moribund language that is found in the Republic of Vanuatu, an archipelago of about 80 islands off of New Caledonia. The first inhabitants settled there around 4,000 years ago, and the population has grown about 2.3% per year according to a 1999-2009 census. Specifically, Ura is found on the southern island of Erromango, home to 1950 people (Daniel, 2010). The language originated just north of Elisabeth Bay and as far as Potnuma, eventually moving to other inland areas including the large caldera (Crowley, 1999). According to Terry Crowley's count in the 1990s it is spoken fluently by 6 people and semi-fluently by a couple dozen others. All the speakers of the Ura language are multilingual. They speak Sye, which is the main language in the island, as well as Bislama, which is their pidgin English. Ura itself may have once been referred to as Aryau or Arau, words that are based on the first person singular possessive pronoun of the language. This naming system is characteristic of other Erromangan languages (Crowley, 1999) (Wiki).

[**URDU, MODERN STANDARD: post-1947**] Urdu (/ˈʊərduː/; Urdu: اُردُو ALA-LC: Urdū; IPA: [ˈʊr̩d̪uː]), or Modern Standard Urdu) is a standardised register of the

Hindustani language. It is the national language and lingua franca of Pakistan, and an official language of six states of India. It is also one of the 22 official languages recognized in the Constitution of India. Urdu is historically associated with the Muslims of the region of Hindustan. Apart from specialized vocabulary, Urdu is mutually intelligible with Standard Hindi, which is associated with the Hindu community (Wiki).

The basis of both Hindi and Urdu is Hindustani, the colloquial form of speech that served as the lingua franca of much of India for more than four centuries. "Hindi was originally a variety of Hindustani spoken in the area of New Delhi. Its development into a national language had its beginnings in the colonial period, when the British began to cultivate it as a standard among government officials... Urdu by origin is a dialect of Hindi spoken for centuries in the neighborhood of Delhi... In time it came to be called Urdu ("camp language") and after further Moslem conquest became the lingua franca over much of the Indian subcontinent." Urdu is the official language of Pakistan. Hindi is the most widely-spoken language in India, centered primarily in the north-central part of the country. "Its 275 million speakers rank it as one of the leading languages of the world, but it is, nevertheless, only understood by about one third of India's population. When independence was achieved in 1947, Hindi was chosen as India's national language, but its failure to win acceptance among speakers of other languages has forced it to share the title of official language with English... Hindi and Urdu are virtually the same language." (Katzner).

[**UTE-SOUTHERN PAIUTE**] Colorado River Numic (also called Ute /'ju:t/, Southern Paiute /'paiju:t/, Ute–Southern Paiute, or Ute-Chemehuevi /tʃɛmɪ'wɛvi/), of the Numic branch of the Uto-Aztecan language family, is a dialect chain that stretches from southeastern California to Colorado. Individual dialects are Chemehuevi, which is in danger of extinction, Southern Paiute (Moapa, Cedar City, Kaibab, and San Juan subdialects), and Ute (Central Utah, Northern, White Mesa, Southern subdialects). According to the Ethnologue, there were a little less than two thousand speakers of Colorado River Numic Language in 1990, or ca. 40% out of an ethnic population of 5,000. The Southern Paiute dialect has played a significant role in linguistics, as the background for a famous article by linguist Edward Sapir and his collaborator Tony Tillohash on the nature of the phoneme (Wiki).

"The Chemehuevi Indians currently number somewhat over three hundred. They reside primarily in the eastern portions of San Bernardino and Riverside Counties in California, and on the Arizona bank of the Colorado River near Parker. Their current homeland is considered to be Chemehuevi Valley, at the eastern edge of the Mohave Desert in Southern California.... The Chemehuevi language is part of the branch of Southern Numic languages, consisting additionally of Southern Paiute, Ute and Kawaiisu. The Numic languages as a whole comprise what was formerly termed the Plateau Shoshonean branch of Uto-Aztec.... Very little has been published on the Chemehuevi language to date.... Recently Carobeth Laird has written an exhaustive ethnographic description of the Chemehuevis which includes numerous detailed glossaries" (Introduction).

[**UYGHUR**] The Uyghur or Uighur (/ˈwiːgər/) language (Uyghur: تىلى رۇيغۇد، Уйғур тили, Uyghur tili, Uyoƣur tili or مەزچۇيغۇد، Уйғурчә, Uygurche, Uyoƣurqә), formerly known as Eastern Turki, is a Turkic language with 10 to 25 million speakers, spoken primarily by the Uyghur people in the Xinjiang Uyghur Autonomous Region of Western China. Significant communities of Uyghur-speakers are located in Kazakhstan and Uzbekistan, and various other countries have Uyghur-speaking expatriate communities. Uyghur is an official language of the Xinjiang Uyghur Autonomous Region, and is widely used in both social and official spheres, as well as in print, radio, and television, and is used as a lingua franca by other ethnic minorities in Xinjiang. The modified

Arabic-derived writing system is the most common and the only standard in China, although other writing systems are used for auxiliary and historical purposes. Unlike most Arabic-derived scripts, the Uyghur Arabic alphabet has mandatory marking of all vowels due to modifications to the original Perso-Arabic script made in the 20th century. Two Latin and one Cyrillic alphabet are also used, though to a much lesser extent. The Arabic and Latin alphabets both have 32 characters (Wiki).

"The war, the teacher of many things, offers those interested in Turkic studies a special opportunity and confronts them with a pressing task: never have there been so many members of the Turkish tribes in Germany as today. Hundreds of thousands of young Turkistanis, Volga Tartars...and others have come within the reach of German scholars as prisoners of war...So we have the opportunity to study their dialects...The knowledge of Russian-Turkish tribes in Germany is still unfortunately slight, just as one generally sees only negative connotations in the words "nomads" and "steppes" (Foreword, tr: BM).

"In recent years there has been a steadily growing interest in the Turkic languages of Central Asia, especially in Uzbek which is one of the major languages of the USSR and has a long literary tradition. The appearance of this Uzbek-English dictionary, the first of its kind, is thus an important contribution for the advancement of Uzbek studies in the English-speaking world... There are between 9,000 and 10,000 head words, but the number of words covered is considerably more..." (from inner flap of d.j.). "A great deal of work has been done on [Uzbek] in the USSR; this includes dictionaries and grammars, but these are available solely to those who know Russian and Uzbek... There was thus a need for an Uzbek-English dictionary, and the present one aims to fill the gap... In the absence of other Uzbek-English dictionaries, a number of literary forms and technical terms were added" (Introduction).

[VAI] The Vai language, alternately called Vy or Gallinas, is a Mande language, spoken by the Vai people, roughly 104,000 in Liberia and by smaller populations, some 15,500, in Sierra Leone. Vai is noteworthy for being one of the few African languages to have a writing system that is not based on the Latin or Arabic script. This Vai script is a syllabary invented by Momolu Duwalu Bukele around 1833, although dates as early as 1815 have been alleged. The existence of Vai was reported in 1834 by American missionaries in the *Missionary Herald* of the ABCFM and independently by Rev. Sigismund Wilhelm Koelle, a Sierra Leone agent of the Church Mission Society of London. The Vai script was used to print the New Testament in the Vai language, dedicated in 2003.

[**VEDDAH**] Vedda /væddā/ was the language of the indigenous Vedda people of Sri Lanka. Additionally, communities such as Coast Veddas and Anuradhapura Veddas, that do not strictly identify themselves as Veddas also used the Vedda language in part for communication during hunting and or for religious chants, throughout the island. When a systematic field study was conducted in 1959, the language was confined to the older generation of Veddas from Dambana. In 1990s self-identifying Veddas knew few words and phrases in Vedda, but there were individuals who knew the language comprehensively. Initially there was considerable debate amongst linguists as to whether Vedda is a dialect of Sinhalese or an independent language. Later studies indicate that Vedda language is a creole which evolved from ancient times, when the Veddas came in contact with the early Sinhalese, from whom they increasingly borrowed words and synthetic features, yielding the cumulative effect that Vedda looked like Sinhalese in many particulars, but its grammatical core was still intact (Wiki).

[6] i-vii viii, 1-114 115-118. First edition: Series: Münchener Studien zur Sprachwissenschaft. Beiheft, Neue Folge, 7. Includes Vedda-English lexicon, pp. 68-96. This copy with the pencil ownership signature of [Bernard] Forssman, one of the editors of the series.

"Though the Vedda community has been a favoured subject of the ethnology ... no systematic study of the Vedda language was available until the publication of the present volume.... The number of speakers of the Vedda language is steadily on the decrease with the progress of acculturation of the Vedda population to the Sinhalese civilization and language" (Preface, Heinz Sechert). "It is a known fact that the Vedda community in Ceylon is fast nearing total extinction...Sinhalese is spoken by some nine million people while the Vedda community does not exceed seven or eight hundred... My chief informant [was] Vannaku Tisaahaami, 'the chief among the hunters, the leader of the forest-dwellers, the ever-truthful descendent of the first man who ever roamed about in the jungles of Ceylon'" (Introduction).

[**VENDA**] Venda, also known as Tshivenda or Luvenda, is a Bantu language and an official language of South Africa. It is mainly spoken by the Venda people in the northern part of South Africa's Limpopo Province, as well as by some Lemba people in Zimbabwe. The Venda language is related to Kalanga (Western Shona, different from Shona, official language of Zimbabwe) which is spoken in Botswana and Zimbabwe. During the Apartheid era of South Africa, the bantustan of Venda was set up to cover the Venda speakers of South Africa (Wiki).

"The terms included in the lists are intended in the first place for use in the primary classes and the majority have been taken from the syllabuses concerned. Further, the list is supplemented with terms taken from the school handbooks and also terms which teachers would normally be expected to know and to use, though not necessarily to teach to their pupils.... [This is an extensive vocabulary which excludes] words in common usage which can be found in the dictionaries.... Some words... have... been included because a comprehensive dictionary does not, as yet, exist" (Preface).

"The area of this language lies largely from north to east of the town of Louis Trichardt... in the Northern Transvaal, South Africa. The people call their country Venda... and their language Tshivenda or occasionally Luvenda. In English one just uses 'Venda' for all forms of the name... The present work is an augmented revision of the 'Tshivenda-English Dictionary' published in 1937 by the Government Printer, Pretoria, as No. 6 of the Ethnological Publications series. As in that first attempt, the saving from oblivion of traditional material was an important consideration. It is gratifying that since those pre-war days a number of authors have written for and about their own people, and recorded everyday speech as they heard it" (Preface).

**[VENEZUELAN LANGUAGES]** There are at least 40 languages around Venezuela, but Spanish is the language spoken by the majority of Venezuelans. The Constitution of Venezuela of the year 1999 declared Spanish and languages spoken by Indigenous people from Venezuela as official languages. Deaf people use Venezuelan Sign Language (lengua de señas venezolana, LSV). Chinese (400,000), Portuguese (254,000)[2] and Italian (200,000), are the most spoken language in Venezuela after the official language of Spanish. Wayuu is the most spoken indigenous language with 170,000 speakers.

[**VENTUREÑO**] Ventureño is a member of the extinct Chumashan languages, a group of Native American languages previously spoken by the Chumash people along the coastal areas of Southern California from as far north as San Luis Obispo to as far south as Malibu. Ventureño was spoken from as far north as present-day Ventura to as far south as present-day Malibu and the Simi Hills, California. Dialects probably also included Castac and Alliklik (Campbell 1997:126). Ventureño is, like its sister Chumashan languages, a polysynthetic language, having larger words composed of a number of morphemes (Wiki).

[**VIETNAMESE**] Vietnamese Listeni/ˌviɛtnəˈmiːz/ (Tiếng Việt) is an Austroasiatic language that originated in the north of modern-day Vietnam, where it is the national and official language. It is the native language of the Vietnamese (Kinh) people, as well as a first or second language for the many ethnic minorities of Vietnam. As the result of Vietnamese emigration and cultural influence, Vietnamese speakers are found throughout the world, notably in East and Southeast Asia, North America, Australia and Western Europe. Vietnamese has also been officially recognized as a minority language in the Czech Republic. It is part of the Austroasiatic language family of which it has by far the most speakers (several times as many as the other Austroasiatic languages combined). Vietnamese vocabulary has borrowings from Chinese, and it formerly used a modified set of Chinese characters called chữ nôm given vernacular pronunciation. The Vietnamese alphabet (quốc ngữ) in use today is a Latin alphabet with additional diacritics for tones and certain letters (Wiki).

**1937:** [LILLY] *Dictionnaire annamite-chinois-français*, by Gustave Hue [1970-1950]. (S.I.): Impr. de Trung Hoà, 1937. Contemporary dark gray cloth with red cloth label lettered in gold on spine. In-4, 4-1199-7 p. [1173]. First edition. With the ownership stamp of E. Dedreau of the Mission du Tonkin Oriental. This dictionary was reprinted in 1971.

"For some time now, the great Genibrel Dictionary [see above] has been out of print. It contained almost the entire basis of the Annamite language of its time.... But since its publication in 1898, numerous neologisms have spring from the pen of native writers. Moreover, as was inevitable, the author omitted a large number of Tonkinese words. In 1930, Cordier attempted to fill these lacunae in a rather important but still incomplete lexicographical work.... In 1932 a group of scholars undertook the compilation of a major dictionary of Annamite which is of incomparable importance to future students. It was, however, written in Annamite, so that those ignorant of the language are unable to use it.... For all these reasons, it seemed that there was room for a new work including, along with the common basis of the language which has not changed since Tabard, all the special terms of the countries of the Union, augmented by neologisms found in pedagogical works and journals. Bowing to the urging of my friends, in spite of the weight of a service of such magnitude, I decided to undertake this work. This is the *Dictionnaire Annamite-Chinois-Français* which I now present to the public" (Avant-Propos, tr: BM)

[**VIRGIN ISLANDS CREOLE ENGLISH**] irgin Islands Creole, or Virgin Islands Creole English, is an English-based creole spoken in the Virgin Islands and the nearby SSS islands of Saba, Saint Martin and Sint Eustatius, where it has been known as Netherlands Antilles Creole English. The term "Virgin Islands Creole" is formal terminology used by scholars and academics, and is rarely used in everyday speech. Informally, the creole is known by the term dialect, as the creole is often perceived by locals as a dialect variety of English instead of an English creole language. However, academic sociohistorical and linguistic research suggests that it is in fact an English creole language. Because there are various varieties of Virgin Islands Creole, it is also known by the specific island on which it is spoken: Crucian dialect, Thomian dialect, Tortolian dialect, Saint Martin dialect, Saba dialect, Statia dialect (Wiki).

"The Was are not cannibals, but they eat dogs, which no Shan, or self-respecting hillman of other races, would dream of doing... There is evidence outside nearly every village in the wild Wa Country that the Was are head-hunters; the skulls in the avenues in the thick primeval groves being regarded as a protection against, and a propitiation of the

spirits of evil. Legitimate head-hunting opens in March and lasts through April... [notes of Sir George Scott, condensed by Drage]... There is a large and comparatively virgin field yet open in the country for the student of languages and customs, such as can hardly anywhere else be found-found too within a distance of less than 100 miles from the headquarters of a settled part of His Majesty's dominions and the terminus of the Kunlong Railway" (Notes on the Was and their Country, p. 6).

[**WAMPANOAG**] The Massachusetts language is an Algonquian language of the Algic language family, formerly spoken by several peoples of eastern coastal and south-eastern Massachusetts and currently, in its revived form, in four communities of Wampanoag people. The language is also known as Natick or Wôpanâak (Wampanoag) and historically as Pokanoket, Indian or Nonantum. The language is most notable for creating a community of literate Indians and for the number of translations of religious texts into the language. John Eliot's translation of the Christian Bible in 1663 using the Natick dialect, known as Mamusse Wunneetupanatamwe Up-Biblum God, was the first printed in the Americas, the first Bible translated by a non-native speaker and one of the earliest example of a Bible translation into a previously unwritten language. [The Lilly Library holds a copy of the first edition of the Eliot Indian Bible in its original binding, and a copy of the second edition with a presentation inscription from Increase Mather]. Literacy spread quickly as Indian ministers and teachers, who were literate, spread literacy to the elites and other members of their communities. This is attested in the numerous court petitions, church records, Praying town administrative records, notes on book margins, personal letters and widespread distribution of other translations of religious tracts throughout the colonial period. The dialects of the language were formerly spoken by several peoples of southern New England, including all the coastal and insular areas of eastern Massachusetts, as well as south-eastern New Hampshire, the southernmost tip of Maine and eastern Rhode Island, but was also a common second or third language across most of New England and portions of Long Island. The use of the language in the mixed-band communities of Christian converts—Praying towns—also spread the language to some groups of Nipmuc and Pennacook. The revitalization of the language began in 1993 when Jessie Little Doe Baird (at the time with the last name Fermino) began the Wôpanâak Language Reclamation Project (WLRP), which has successfully re-introduced the revived Wampanoag dialect to the Aquinnah, Mashpee, Assonet and Herring Pond tribes of the Wampanoag of Cape Cod and the Islands, with a handful of children who are growing up as the first native speakers in more than a century. The Massachusetts people continue to inhabit the area around Boston and other Wampanoag tribes are found throughout Cape Cod and Rhode Island. Other descendants of Massachusetts-language speakers include many of the current Abenaki people and the locals of Saint David's Island, Bermuda, both of whom absorbed large numbers of Indians of southern New England in the aftermath of King Philip's War (Wiki).

[**WANGAAYBUWAN-NGIYAMBAA**] The Ngiyambaa language is a Pama–Nyungan language of the Wiradhuric subgroup. It was the traditional language of the Wangaaybuwan and Wayilwan peoples of New South Wales, Australia, but is now

moribund; according to Donaldson by the 1970s there were only about ten people fluent in Wangaaybuwan, whilst there were only a couple of Wayilwan speakers left. Ngiyambaa (meaning language), or Ngiyambaambuwal, was also used by the Waangaybuwan and Wayilwan to describe themselves, whilst 'Waangaybuwan' and 'Wayilwan' (meaning 'With Waangay/Wayil' (for 'no')) were used to distinguish both the language and the speakers from others who did not have wangaay/wayil for no. Other names for Ngiyambaa are: Giamba, Narran, Noongaburrah, Ngampah, Ngemba, Ngeumba, Ngiamba, Ngjamba, Ngiyampaa, Ngumbarr; Wangaaybuwan is also called Wongaibon, and Wayilwan is also called Wailwan, Weilwan or Wailwun (Wiki).

[**WAPPO**] Wappo is an extinct language that was spoken in the Alexander Valley north of San Francisco by the Wappo Native Americans. The last fluent speaker, Laura Fish Somersal, died in 1990. Wappo's language death is attributed to the use of English in schools and economic situations such as the workplace. According to Somersal, the name for the people and language is derived from the Spanish word *guapo*, meaning "handsome" or "brave". The name for the people was originally Ashochimi. Wappo is generally believed to be distantly related to the Yuki language, and is distinct largely due to Pomoan influence. Paul Radin published the first texts on Wappo grammar in the 1920s. Jesse O. Sawyer published the "English-Wappo Vocabulary" in 1965 and continued to study Wappo grammar throughout his life (Wiki).

[**WARAY-WARAY**] Waray is the fifth-most-spoken native regional language of the Philippines, specific to the provinces of Samar, Northern Samar, Eastern Samar, Biliran, and the north-east of Leyte island (surrounding Tacloban). It is the third most spoken language among the Visayan languages after Hiligaynon (Ilonggo) and Cebuano. The language name comes from the word often heard by non-speakers, "waray" (meaning "none" or "nothing" in Waray); similarly, Cebuanos are known in Leyte as "mga Kana" and their language as "Kana" (after the oft-heard word "kana", meaning "that" in the Cebuano language) (Wiki).

“Finally, a note on the colloquial and informal *Waray-Waray*. Waray means nothing, nil, none in the vernacular, and the compounded waray, in the augmentive sense, means double nothing; in the diminutive, it means little nothing. Used with the term Visayan,

you have Double Nothing Visayan, or Little Nothing Visayan. As a term for a people and their language, it certainly is not music to the ears” (Preface).

[**WASHO**] Washo /'wɒʃu/ (or Washoe; endonym wá:šiw ʔítlu) is an endangered Native American language isolate spoken by the Washo on the California–Nevada border in the drainages of the Truckee and Carson Rivers, especially around Lake Tahoe. While there are only 20 elderly native speakers of Washo, since 1994 there has been a small immersion school that has produced a number of moderately fluent younger speakers. The immersion school has since closed its doors and the language program now operates through the Cultural Resource Department for the Washoe Tribe. The language is still very much endangered; however, there has been a renaissance in the language revitalization movement as many of the students who attended the original immersion school have become teachers. Ethnographic Washo speakers belonged to the Great Basin culture area and they were the only non-Numic group of that area. The language has borrowed from the neighboring Uto-Aztecan, Maiduan and Miwokan languages and is connected to both the Great Basin and California sprachbunds (Wiki).

The exact number of Wayana is unclear. The issue is complicated due to the fact that counts are done on a per-country basis. SIL Ethnologue lists 850 users of the language and 1950 ethnic Wayana in all countries, using counts from 2006 and 2007. Instituto Socioambiental, a Brazilian NGO, lists 1629 ethnic Wayana, using counts from 2002 and 2014. The count of ethnic Wayana individuals is further complicated due to the close ties that the Wayana share with other ethnic groups in the region, especially the Aparai in

Brazil, to the extent that they are sometimes considered one group, the Wayana-Aparai (Wiki).

[WAYUU] The Wayuu language, or Goajiro (Wayuu: Wayuunaiki), is spoken by 305,000 indigenous Wayuu people in northwestern Venezuela and northeastern Colombia on the Guajira Peninsula. Wayuu is one of the major Arawakan languages. There are minimal differences depending on the region of La Guajira in which speakers live. Most of the younger generations speak Spanish fluently. The extinct Guanebucan language may actually have been a dialect of Wayuu. To promote cultural integration and bilingual education among Wayuu and other Colombians, the Kamusuchiwo'u Ethno-educative Center or Centro Etnoeducativo Kamusuchiwo'u came up with the initiative of creating the first illustrated Wayuunaiki-Spanish, Spanish-Wayuunaiki dictionary. Less than 1% of Wayuu speakers are literate in Wayuu while 5 to 15% are literate in Spanish. There are 200,000 speakers in Venezuela and 120,000 in Colombia. Smith (1995) reports that a mixed Guajiro-Spanish language is replacing Wayuu in both countries. However, Campbell (1997) could find no information on this (Wiki).

**[WICHITA]** Wichita is an extinct Caddoan language once spoken in Oklahoma by the Wichita and Affiliated Tribes. The last fluent heritage speaker, Doris Lamar-McLemore, died in 2016, although in 2007 there were three first-language speakers alive. This has rendered Wichita functionally extinct; however, the tribe offers classes to revitalize the language and works in partnership with Wichita Documentation Project of the University of Colorado, Boulder. When the Europeans began to settle North America, Wichita separated into three dialects; Waco, Tawakoni, and Kirikirʔi:s (aka, Wichita Proper). However, when the language was threatened and the number of speakers decreased, dialect differences largely disappeared (Wiki).

"This dictionary of the Wik-Ngathan language of western Cape York Peninsula, Queensland, is a by-product of anthropological and linguistic research I have carried out in the area of Cape Keerweer and Aurukun since 1976.... As it happens, there is probably enough here to justify the appearance of a Wik-Ngathan dictionary at this time, even though it only scratches the surface of the language.... Although Wik-Mungkan [cf. Kilham, Pamulkan, et al. *Dictionary and source-book of the Wik-Mungkan language, 1986*] are related and are structurally very similar, their differences are also considerable and they are not dialects of a single languages.... All speakers of Wik-Ngathan are fluent in Wik-Mungkan" (Preface). "Wik-Ngathan is a language belonging to several hundred people who live mainly at or near Aurukun in western Cape York Peninsula.... Those who speak it well would now number perhaps a hundred, possibly fewer" (Introduction).

[**WINTU**] Wintu /wɪn'tu:/ is a critically endangered Wintuan language spoken by the Wintu people of Northern California. It is the northernmost member of the Wintun family of languages. The Wintuan family of languages was spoken in the Sacramento River Valley and in adjacent areas up to the Carquinez Strait of San Francisco Bay. Wintun is a branch of the hypothetical Penutian language phylum or stock of languages of western North America, more closely related to four other families of Penutian languages spoken in California: Maiduan, Miwokan, Yokuts, and Costanoan. The Wintu were in contact also with adjacent speakers of Hokan languages such as Southeastern, Eastern, and Northeastern Pomo; Athabaskan languages such as Wailaki and Hupa; Yukian languages such as Yuki and Wappo; and other Penutian languages such as Miwok, Maidu, Yokuts, and Saclan. Besides these contiguous languages surrounding the Wintun area wider contacts with speakers of Russian, Spanish, and English. As of 2011, Headman Marc Franco of the Winnemem Wintu has been working with the Indigenous Language Institute on revitalization of the Winnemem Wintu language (Wiki).

[**WIRANGU**] The Wirangu language is a moribund Australian Aboriginal language traditionally spoken by the Wirangu people, living on the west coast of South Australia across a region encompassing modern Ceduna and Streaky Bay, stretching west

approximately to the head of the Great Australian Bight and east to Lake Gairdner. Because of the intensive culture contacts in the southern half of South Australia, which brought dislocation and culture change, traditional lifeways and traditional ways of speaking declined during the nineteenth and twentieth centuries. In the case of Wirangu, the establishment of the Koonibba mission in 1898 brought intense contact with other languages, in particular Kokatha. As all languages spoken in South Australia are ultimately derived from the same ancestor, they share a common inheritance of grammar, lexicon and pronunciation. A Wirangu language revitalization program has been underway at Ceduna and surrounding areas since 2004. In 2005 the Far West Languages Centre was established in Ceduna. The Centre supports and promotes the use of the Wirangu language as well as other extremely endangered local languages, such as Gugada/Kokatha and Mirning (Wiki).

[**WIYOT**] Wiyot (also Wishosk) is an extinct Algic language, formerly spoken by the Wiyot people of Humboldt Bay, California. The language's last native speaker, Della Prince, died in 1962. Wiyot, along with its geographical neighbor Yurok, were first identified as relatives of the Algonquin languages by Edward Sapir in 1913, though this classification was disputed for decades in what came to be known as the "Ritwan controversy". Due to the enormous geographical separation of Wiyot and Yurok from all other Algonquin languages, the validity of their genetic link was hotly contested by leading Americanist linguists; as Ives Goddard put it, the issue "has profound implications for the prehistory of North America". However, by the 1950s, the genetic relationship between the Algonquin languages and Wiyot and Yurok had been established to the satisfaction of most, if not all, researchers, giving rise to the term "Algic" to refer to the Algonquin languages together with Wiyot and Yurok. Some Wiyots are attempting a revival of the language (Wiki).

[**WOLOF**] Wolof (/ˈwɒləf/) is a language of Senegal, the Gambia, and Mauritania, and the native language of the Wolof people. Like the neighbouring languages Serer and Fula, it belongs to the Senegambian branch of the Niger–Congo language family. Unlike most other languages of Sub-Saharan Africa, Wolof is not a tonal language. Wolof originated as the language of the Lebu people. It is the most widely spoken language in Senegal, spoken natively by the Wolof people (40% of the population) but also by most other Senegalese as a second language. "Wolof" is the standard spelling and may refer to the Wolof people or to Wolof culture. Variants include the older French Ouolof and the principally Gambian "Wollof". "Jolof", "jollof", etc., now typically refers either to the Jolof Empire or to jollof rice, a common West African rice dish. Now-archaic forms include "Volof" and "Olof" (Wiki).

**[WORIMI]** Worimi is a small family of two to five extinct Australian Aboriginal languages of New South Wales. Awabakal, spoken around Lake Macquarie in New South Wales. Awabakal was studied by Reverend Lancelot Edward Threlkeld from 1825 until his death in 1859, assisted by Biraban, the tribal leader, and parts of the Bible were translated into the language. For example, the Gospel of Mark begins: "Kurrikuri ta unni Evanelia Jesu úmba Krist koba, Yenal ta noa Eloí úmba." [2] The language is currently in early stages of revival. Gadjang (Worimi), an extinct language spoken by the Worimi people, from the eastern Port Stephens and Great Lakes regions of coastal New South Wales. The languages are close enough to be accepted as related in the conservative classification of Dixon (2002). Bower (2011) considers Gadjang, Worimi, and Birrpai to be separate languages.

[**WYANDOT**] Wyandot is the Iroquoian language traditionally spoken by the people known variously as Wyandot or Wyandotte, descended from the Wendat (Huron). It was last spoken by members located primarily in Oklahoma, United States and Quebec, Canada. Linguists have traditionally considered Wyandot as a dialect or modern form of Wendat. Wyandot essentially "died out" as a spoken language nearly a century ago, though there are now attempts at revitalization. The Wyandotte Nation of Oklahoma is offering Wyandot language classes in the Wyandotte Public Schools, grades K–4, and also at the Wyandotte Nation's preschool "Turtle-Tots" program. The Wendat Community of Quebec is offering adult and children's classes in the Wendat language at its village school in Wendake (Wiki).

[**XÂRÂCÛÛ**] Xârâcùù, or Kanala, is an Oceanic language spoken in New Caledonia. It has about 5,000 speakers. Xârâcùù is most commonly spoken in the south Central area of New Caledonia in and around the city of Canala and the municipalities of Canala, Thio, and Boulouparis. Xârâcùù is a strict SVO sentence structure with few exceptions. Efforts to determine how the language evolved to the present has been met with difficulty due to Xârâcùù's lack of reflexive markers in established Proto-Oceanic forms. Xârâcùù has been taught since 1980 at the primary level in the popular Kanak school (EPK or Ecole Populaire Kanak) Canala, only establishment of its kind still existing in 2013, the students can then join public education. The language is also offered at the private Catholic college Francis Rouge-Thio and public college Canala.

[**XHOSA**] The Xhosa language (English /'kɔ:sə/ or /'kousə/; Xhosa: isiXhosa [isiklʰó:sa]) is a Bantu language with click consonants ("Xhosa" begins with a click) and one of the official languages of South Africa. It is spoken by approximately 7.6 million people, or about 18% of the South African population. Like most other Bantu languages, Xhosa is a tonal language; the same sequence of consonants and vowels can have different meanings, depending on intonation. Xhosa has two tones: high and low. Xhosa is written with the Latin alphabet.

Ethnologue: xho. Alternate Names: "Cauzuh" (pej.), Isixhosa, Koosa, Xosa.

**1834:** [LILLY] *A grammar of the Kafir language*, by William B[innington] Boyce (1803-1889). Graham's Town: Printed at the Wesleyan Mission Press, 1834. [8], 54 p.; 28 cm. Original maroon cloth, spine lettered in gold, hinges cracking and chipping. BM, 25:173. NUC pre-56, 70:601.

"Dear Brother, My respected brethren in the Ministry, as well as myself feel, that to no one could this, the *first* Kafir Grammar ever printed, be inscribed with more propriety than to the *first* Wesleyan Missionary in Kaffraria" [printed dedication to Rev. William Shaw from the compiler].

"As the circulation of the following pages will probably be confined to Missionaries, whose duties and necessities oblige them to acquire the language of the people among whom they labour, and to a few literary characters who feel interested in tracing the analogies and dissimilarities of the various Languages spoken in southern Africa, it will be unnecessary for me to apologize for the errors and omissions they may discover, as such individuals are well aware of the difficulties which attend the composition of the first Grammr of any language. I would recommend my Missionary Brethren to make use of an interleaved Copy, requesting them carefully to note such corrections and additions as in the course of their daily speaking and translating they may deem necessary" (W. B. Boyce: Preface, dated February 5<sup>th</sup>, 1834).

Second edition **1844:** [LILLY] *A grammar of the Kaffir language*, by William B. Boyce. 2nd ed., augmented and improved with vocabulary and exercises, by William J. Davis. London: Printed for the Wesleyan Missionary Society ... sold also by John Mason ..., 1844. xxviii, 228 p.; 22 cm. Bound in black half calf and marbled boards, gilt spine title, edges marbled. A newly-added unsigned and undated Introduction, pp. [v]-xviii, includes "Specimens of the Languages of South Africa resembling the Kaffir and Sechuana" (English-Kaffir-Sechuana-Delagoa-Bay-Makoha-Monjou-Sowauli or Sowaiel) "taken from Botelar's 'Voyage on the East Coast,' and Salt's work on Abyssinia and East Africa" (p. xiii). "A Short English and Kaffir Vocabulary and Phrase Book" has also been added, Vocabulary, pp. [134]-175, and Phrase Book, pp. [176]-197. This appears to be the earliest substantial printed vocabulary of the language.

"When the Rev. William J. Davis was about to visit England in the year 1839, he was requested to superintend the printing and publication of a new edition of the Rev. William Boyce's Kaffir Grammar" (Advertisement to the Second Edition).

Third edition **1863:** [LILLY] *A grammar of the Kaffir language*, by William B. Boyce (1803-1889). Third ed., augmented and improved with exercises by William J. Davis. London: Wesleyan Missionary Society,

1863. xi, [1], 164 p.; 19 cm. Original purple pebbled cloth, decorated in blind and lettered in gold. . Includes "Kaffir" [Xhosa]-English list of adverbs, conjunctions and prepositions, pp. 128-130. The "Vocabulary and Phrase Book" of the second edition has been dropped, probably in light of the second edition of John Ayliff's *A vocabulary of the Kafir Language*, published that same year by the same press. This copy with the book plate of I & F.W. Hosken (cf. Catalogue of their library, 1981).

**1846:** [LILLY] *A vocabulary of the Kafir language*, by John Ayliff, Wesleyan Missionary in Kaffraria. London: The Wesleyan Mission House, 1846. Original black half-leather and marbled paper over boards. Pp. [4] *i-iii* iv-viii 1 2-218 219-224. First edition. Not in Zaunmüller. Hendrix 1742. Includes English-"Kafir", pp. [1]-218. This copy with the book plate of I & F.W. Hosken (cf. Catalogue of their library, 1981).

"Few persons, but those actually engaged in the Mission work, can form any idea of the difficulties presenting themselves to a Missionary on his entering his field of labour; the principal of which is his being unacquainted with the language of the people among whom he dwells. This difficulty is considerably heightened with a people who possess no books, as was the case with the Kaffir nation previous to their intercourse with Missionaries.... One great peculiarity in the language is, that the women speak a dialect, or rather numerous words, widely different to those used by the men. This arises from a custom called *uku hlonipa*, whereby the women are prohibited using their male relatives' names" (Introduction).

Second impression ("Second edition") **1863:** [LILLYbm] *A vocabulary of the Kaffir language. Second edition.*, by John Ayliff. London: The Wesleyan Mission House, 1863. Original maroon cloth over boards, decorated in blind, spine lettered in gold (covers loose but present, with original endpapers). Pp. [2] *i-iii* iv-viii, 1 2-218 219-220. Second edition. Not in Hendrix (cf. Hendrix 1742). [Note: This is appears to be a second impression of the first edition, but I have not yet actually compared them)]. Includes English-Kaffir, pp. [1]-218. This copy with the ownership signature of M. A. Wolfs, dated 1868 and with a bookplate from "The Waterhouse Collection 1902". With ink stamp on title page.

**1850:** [LILLY] *The Kafir language: comprising a sketch of its history; which includes a general classification of South African dialects, ethnographical and geographical: remarks upon its nature: and a grammar*, by the Rev. John W[hittle] Appleyard (1814-1874). King William's Town: Printed for the Wesleyan Missionary Society, 1850. Original cloth with original worn printed paper label. This copy with the book plate of I & F.W. Hosken (cf. Catalogue of their library, 1981). This grammar includes a contemporary loosely inserted manuscript page of "Kafir idioms", and various brief word lists arranged by grammatical parts. Pp. 4-5 is a Comparative Table of North African Dialects, including English and 14 languages.

**1872a:** [LILLY] *A Dictionary of the Kaffir Language: including the Xosa and Zulu Dialects*, by Rev. William J[affer] Davis. London: The Wesleyan Mission House, 1872. Contemporary worn black half-leather and brown cloth over boards, spine lettered in gold. Pp. *i-v* vi-vii *viii*, 1 2-260. Hendrix 1743. Interleaved throughout, with three leaves of manuscript annotation at end. First edition. This copy bears a presentation inscription: 'O. Padel | In aufchtigtger Dankbarkeit | und dankbarer Liebe zum An |

Also with ownership inscription of W[erner] Bourquin, author of various publications on the Xhosa and Zulu language in the early 1950's. This interleaved copy copiously annotated in German throughout, with numerous additions; the final three leaves contain "Isiteto Sprichwörter" [sayings]. These annotations seemed to have been incorporated in detail in the manuscript dictionary of C. Liebich (see below).

**1872b:** [LILLY] *A Grammar of the Kaffir Language*, by William J[afferd] Davis. London: Printed for the Wesleyan Missionary Society, 1872. viii, 183, [1] p. incl. tables. 22 cm. Original dark brown pebbled cloth, lettered in gold and decorated in blind. With the stamp of the British and Foreign Bible Society Library in blind on the title page. Includes "Kaffir" [Xhosa]-English list of adverbs, conjunctions and prepositions, pp. 129-130.

**1877:** [LILLYbm] *An English and Kaffir Dictionary. Principally of the Xosa-Kaffir, but including also many words of the Zulu-Kaffir dialect*, by W[illiam] J[afferd] Davis. London: Printed for the Wesleyan Missionary Society, 1877. Later brown cloth over boards, lettered in gold, and with the coat of arms of the Guildhall Library London. Pp. *i-iii* iv-xiv xv-xvi, 1 2-232 [final page misnumbered 332]. First edition. Zaunmüller, col. 410. Hendrix 1744. Includes English-Xhosa/Zulu, pp. [1]-232. This copy with the bookplate of the Guildhall Library London, and with ink withdrawal stamps on preliminary and final pages.

'The English-Kaffir Dictionary now published is the companion volume to the Kaffir-English Dictionary published by the Author when in England in the year 1872.... It is... hoped that the delay in its publication has given time and opportunity for such revision and emendations as will make the work more valuable than it would have otherwise been. The Kaffir and the cognate languages of the continent of Africa are distinguished by a peculiarity which is not found in other languages. This has been designated as the Euphonic or Alliteral Concord; as by this principle of the language a uniform system of alliteration is sustained throughout its grammatical formation, which greatly promotes its euphonious utterance. The Euphony is consequent upon the repetition of the same letter or syllable in many of the words of the same sentence" (Introduction).

Revised and enlarged edition **1903:** [LILLY] *An English-Kaffir dictionary, principally of the Xosa-Kaffir but including also many words of the Zulu-Kaffir dialect*, by William Jafferdd Davis. Cape Town, S.A., Methodist Pub. Office and Book-room, 1903. Revised and enlarged by William Hunter. vi, 499, [1] p. 16 cm. Contemporary dark brown half leather, lettered in gold, with marbled endpapers. This edition not in Hendrix (cf. Hendrix 1745).

"Many years ago I contemplated compiling an English-Kaffir Dictionary, and for that purpose accumulated a large number of words; but, through failure of health, I had to abandon the thought and return to England. When, therefore, I was invited to revise and enlarge Mr. Davis's work, and supplied with a copy of the venerable Dr. Kropf's excellent Kaffir-English Dictionary to assist me, I complied with great pleasure. Debarred from the advantage of conference with those conversant with the Kaffir tongue, I have not only checked most of my words by Dr. Kropf, but

also added from his pages a considerable number of terms I had forgotten, and some I never knew. The work is now twice its former size; and I trust it will prove acceptable and useful to both Europeans and Natives" (Preface by William Hunter, dated 1903).

Reprinted **1917**: [LILLY] *An English-Kaffir Dictionary. Principally of the Xosa-Kaffir, but including also many words of the Zulu-Kaffir dialect*, by W[illiam] J[affer] Davis. "On 10<sup>th</sup> March, 1911, Principal Henderson handed over the work of editing a new edition of Kropf's 'Kaffir-English Dictionary' to my care, leaving me with an absolutely free hand; on that same day he gave into my keeping Dr. Kropf's annotated copy of the dictionary which had been bequeathed to Lovedale by its owner.... I have [also] sought help from every quarter and under all circumstances.... Mr. McLaren, whose researches in Kafir have become through his Kafir Grammar (1906) part of the inheritance of all Kafir scholars, tore up his own well-annotated copy of the first edition of the dictionary and sent it on by installments... The printing has taken over two years.... The native compositors have taken a keen interest in the progress of the work and latterly rendered great assistance in the definitions of words. On 14 July, 1915, when the dictionary had been printed off as far as page 368, our joint labours were nearly consumed in smoke by a fire breaking out in the engine-room immediately beneath the place where the printed sheets were stored. The presence of mind of one of the native boys enabled him to deal effectively with the cause of the outbreak and Mr. Atkinson at great personal risk fought the fire, being badly burned but saving the dictionary!" (Preface to the Second Edition, Robert Godfrey).

[**XIBE**] The Xibe language (sibe gisun, also Sibó, Sibe, Xibo language) is the most widely spoken of the Tungusic languages spoken by members of the ethnic group in Xinjiang, in the northwest of the People's Republic of China. Xibe is conventionally viewed as a separate language within the southern group of Tungusic languages, alongside the more well-known Manchu language, having undergone more than 200 years of development separated from the Tungusic-speaking heartland since Xibe troops were dispatched to the Xinjiang frontiers in 1764. Some researchers such as Jerry Norman hold that Xibe is a dialect of Manchu, whereas other Xibologists, such as An Jun, argue that Xibe should be considered the "successor" to Manchu. Ethnohistorically, the Xibe people are not considered Manchu people, because they were excluded from chieftain Nurhaci's 17th-century tribal confederation to which the name "Manchu" was later applied (Wiki).

[**!XOO**] Taa /'ta:/, also known as !Xóǝ (!Khong, !Xoon – pronounced /!χǝ:1/, English /'kou/), is a Khoisan language notable for its large number of phonemes, perhaps the largest in the world. Most speakers live in Botswana, but a few hundred live in Namibia. The people call themselves !Xoon (pl. !Xoonǝake) or 'Nlohan (pl. Nlumde), depending on the dialect they speak. Taa is the word for 'human being'; the local name of the language is Taa ǝaan, from ǝaan 'language'. !Xoon (!Xóǝ) is an ethnonym used at opposite ends of the Taa-speaking area, but not by Taa speakers in between. Most living Taa speakers are ethnic !Xoon (plural !Xoonǝake) or 'Nlohan (plural Nlumde). Taa shares a number of characteristic features with West ǝ'Amkoe and Glui, which together are considered part of the Kalahari Basin sprachbund (Wiki).

Series: Communication of the University of Cape Town, School of African Studies, no. 37.

Includes !xoo-Afrikaans, pp. <sup>2</sup>[1]-138, a list of proper names, pp. <sup>2</sup>139-141, and a list of bird and plant names with Afrikaans and/or Latin equivalents, pp. <sup>2</sup>142-166.

"Dr. Snyman has written this study in Afrikaans...as it was his wish that the book should serve the people concerned. The !xû are in an Afrikaans-speaking area where English is very rarely heard. We plan to make part of this issue available to !xû schools at cost price so that they may benefit from it....Though [Dr. Snyman's] achievement may not be final, we now at last have a serviceable spelling that Bushman speakers can read and write. The dictionary or 'woordeboek' may be regarded as the first true and serviceable monographic dictionary of any of the Bushman languages of Southern Africa. Dorothea Bleek's posthumous work is comparative, and is, in any case, a pronunciation rather than a conceptual dictionary... Vedder's word-list contains perhaps as many entries as Dorothea Bleek's comparative entries for !xû...but is worth mentioning in this context as equal to a dictionary, for it has much to recommend it. The Hottentot dictionaries are not covered in this survey, but would include Dorman's Hiechware list..., Kronlein's Nama dictionary, and Meinhof's Koranna word-list. Dr. Snyman's dictionary contains some 3300 entries, though he says that this represents a small percentage only of the words in general use in the languages.... I do not think that many authorities will be able to correct Snyman's dictionary for quite a number of years and I believe it will remain the standard and authoritative reference work for a long time" (Editor's Foreword, E.O.J. Westphal)

[**YABEM**] Yabem or Jabêm is an Austronesian language spoken natively (in 1978) by about 2000 people at the southern tip of the Huon Peninsula in Morobe Province, Papua New Guinea. However, Yabem was adopted as local lingua franca for evangelical and educational purposes by the German Lutheran missionaries who first arrived at Simbang, a Yabem-speaking village, in 1886. By 1939, it was spoken by as many as 15,000 people, and understood by as many as 100,000 (Zahn 1940). In the decade after World War II, the mission's network of schools managed to educate 30,000 students using Yabem as the medium of instruction (Streicher 1982). Although the usage of Yabem as a local lingua franca has now been replaced by Tok Pisin, Yabem remains one of the best documented Austronesian languages, with extensive instructional and liturgical materials (including many original compositions, not just translations from German or English) as well as grammars and dictionaries (Wiki).

Original dark blue cloth over boards, lettered in gold; dust jacket yellow-green, lettered and decorated in black. Pp. [2] *i-ii* iii-xii, 1-674 + 1 2-19 (advertisements). First edition. Pacific Linguistics, Series C, No. 68. Includes Yabem-English, pp. 1-628. P. 658 lists several mimeographed dictionaries of Jabêm. It appears from the preface that Zahn's German Jabêm dictionary of 1917 was also only mimeographed and never published as a book. This appears to be the first publication of the dictionary in book form, and certainly the first Yabem-English dictionary.

"This present dictionary of the Jabêm language is the largest dictionary of an Austronesian language of Papua New Guinea. The language, originally spoken by only about 900 people in an area 30 km south of Finschhafen on the coast of the Huan Peninsula, was adopted as a church language by the Lutheran Mission in the mid-1880's.... About 25,000 people have an active knowledge of it today. The dictionary gives a wealth of information on aspects of the old culture and traditions of the Jabêm people which are no longer known to the present generation" (from the front flap of the dust jacket). "J.F. Streicher ...served the Lutheran Mission New Guinea at Kaiapit...at Hopio...and at Logaweng. After internment at Tatura, Victoria (1940-1948) he returned to PNG in 1949" (from the back flap of the dust jacket).

[**YAGARA**] Turrubal (Turubul), also known as Yagara (Jagara), is an extinct language of Australia. Other spellings of Turrubal are Turrbul, Turrabul, Toorbal, Tarabul; other names of Yagara are Ugarapul, Yuggarabul, Yuggera, Yuggarapul, Yackarabul; a third name is Jinibara. The four dialects listed in Dixon (2002) are sometimes seen as separate Durubalic languages, especially Jandai and Nukunul; Yagara and Turubul proper are more likely to be considered dialects.

[**YAGNOBI**] The Yaghnobi language is a living Eastern Iranian language (the other living members being Pashto, Ossetic and the Pamir languages). Yaghnobi is spoken in the upper valley of the Yaghnob River in the Zarafshan area of Tajikistan by the Yaghnobi people. It is considered to be a direct descendant of Sogdian and has often been called Neo-Sogdian in academic literature. There are some 12,500 Yaghnobi speakers. Most Yaghnobi speakers are bilingual in the West Iranian Tajik. Yaghnobi is mostly used for daily family communication, and Tajik is used by Yaghnobi-speakers for business and formal transactions. A single Russian ethnographer was told by nearby Tajiks, long hostile to the Yaghnobis, who were late to adopt Islam, that the Yaghnobis used their language as a "secret" mode of communication to confuse the Tajiks. The account led to the belief by some, especially those reliant solely on Russian sources, that Yaghnobi or some derivative of it was used as a code for nefarious purposes (Wiki).

[**YAKA**] Aka, also known as Yaka or Beka, is a Bantu language spoken in the Central African Republic and Republic of Congo, along the Ubangi River dividing the two countries. Aka is spoken by the Aka people, Pygmies closely related to the Ubangian-speaking Baka of Cameroon, Congo, and Gabon. Together, these peoples are known as the Mbenga (Bambenga) or Binga (Babinga), the latter derogatory. Famously, Aka shares vocabulary with the Baka languages, mostly concerning a specialized forest economy, such as words for edible plants, medicinal plants, and honey collecting. This is among the 30% of Aka which is not Bantu, and the 30% of Baka which is not Ubangian, and has been posited as the remnant of an ancestral Western Pygmy (Mbenga or "Baaka") language which has otherwise vanished. However, it is entirely possible that the Aka shifted to Bantu from a Ubangian language related to Baka, in which case the situation reduces to a single ethnic group adapted to the forest with correspondingly specialized vocabulary. There is no evidence for a wider linguistic affiliation with any of the other Pygmy peoples. The Aka people call themselves Mraka in the singular and Beka in the plural. The people and their language go by various alternate spellings: Mò-Áka, Moyaka, Bayaka, Yaga, Bayaga, Gbayaka, Biaka, Beká, Yakwa, Yakpa, Yakpwa, Nyoyaka. The western Aka are known as the Benzele (Mbenzélé, Babenzélé, Bambenzele, Ba-Benjelle), and the eastern Aka as the Sese (Basese). These might be distinct dialects; Nzari might be another. Pygmies of northern Gabon called the Mikaya and Luma are evidently either Aka or speak a language closely related to Aka (Wiki).

[YÁMANA] Yagán (originally Yahgan, but also now spelled Yaghan, Jagan, Iakan), also known as Yámana and Háusi Kúta, is one of the indigenous languages of Tierra del Fuego, spoken by the Yagán people. It is regarded as a language isolate, although some linguists have attempted to relate it to Kawésqar and Chon. Along with other Fuegian languages, it was among the first South American languages to be recorded by European explorers and missionaries. Yahgan was also spoken briefly on Keppel Island in the Falkland Islands at a missionary settlement. Following the death of 84-year-old Emelinda Acuña (1921 – October 12, 2005), only one native speaker remains, Cristina Calderón of Villa Ukika on Navarino Island, Chile. Calderón (often referred to as simply Abuela) is the sister-in-law of Acuña.

"For oral acquisition of an aboriginal language, the only possible method, it is necessary to have not only the full confidence of the native tribe, but many years of daily contact with different members. Thus the dictionary compiled by the Rev. Thomas bridges of the Yaghan language, comprising approximately 32,000 distinct words with many unique features; not overlaid by the speech of other tribes, even of their immediate neighbours; with evidence of slow and undisturbed growth in this most southerly portion of the inhabited world, and their speech sprung from even older roots; must stand both as a unique human exhibit and a major achievement in the science of Philology" (Preface, W. S. Barclay).

The language perished in 1916 with the death of Ishi, who spoke the Yahi dialect. Yana is fairly well-documented (mostly by Edward Sapir) compared to other extinct American languages. The names Yana and Yahi are derived from the word for "people" in the respective dialects (Wiki).

Ethnologue does not list this extinct language.

"The Yans employed in this work is that of the 'Mbe' tribe in the Bagata zone [Zaire]... It should be pointed out that the French part of this dictionary has been borrowed from the French-Kikongo dictionary ... of Rev. Father Hermann Hohegger, Director of CEEBA. It has been forty years since the Rev. Father Pierre Swartenbroeckxs SJ published his Yans-French French-Yans Dictionary (Brussels 1948) [not listed in Zaunmüller]. Unfortunately, this work is no longer available except for a few rare copies in libraries... Why a "French-Yans Dictionary"? The work will be of

interest to those who wish to learn Yans... There are Yans students who don't really know their mother tongue well. I wish to present my native language to the people who speak French and who are interested in the other languages of Zaire" (tr: BM).

[**YAO**] Yao is a Bantu language in Africa with approximately two million speakers in Malawi, and half a million each in Tanzania and Mozambique. There are also some speakers in Zambia. In Malawi, the main dialect is Mangoche, mostly spoken around Lake Malawi. In Mozambique, the main dialects are Makale and Massaninga. In common with very many vernacular languages in Africa, it has historically enjoyed little official recognition, and literary work in the region where Yao is spoken has taken place in such languages as Arabic, English, German and Portuguese (Wiki).

[**YAZGULYAM**] The Yazgulyam language (also Yazgulyami, Iazgulem, Yazgulam; Tajik: yazgulomi) is a member of the Southeastern subgroup of the Iranian languages, spoken by ca. 4,000 native speakers in 1994 along the Yazgulyam River, Gorno-Badakhshan, Tajikistan. Together with Shugni, it is classified in a Shugni-Yazgulami subgroup, as well as a part of the areal group of Pamir languages. Virtually all speakers are bilingual in the Tajik language. The language was first recorded by Russian traveller G. Arandarenko in 1889, listing 34 Yazgulami words recorded in 1882. The language was described in greater detail by French linguist Robert Gauthiot in *Notes sur le yazggoulami, dialecte iranien des Confins du Pamir* (1916). The Yazgulyam people are an exception among the speakers of Pamir languages in that they do not adhere to Ismailism. In 1954 the Yazgulami living on the mountain slopes were resettled, about 20% of them forcibly, to the Vakhsh valley, where they live dispersed among the Tadjiks, Uzbeks, Russians and other ethnic groups (Wiki).

[YIPMA] Yipma (pronounced as Hipma) is an Angan language of Papua New Guinea. Dialects are Wantakia, Baruya (Barua), Gulicha, Usirampia (Wuzuraabya). 'Baruya' refers to the accent of the Bruwa tribe, currently residing around the Marawaka station area. The original tribe that had been in Marawaka is the Anzii tribe. They are now located at the foot of Mount Yelia in three villages; Wauko, Ande and Mala. The Baruwu tribe were refugees, from somewhere in the Meniyamiya area of Morobe province, who had been driven out of their land in a tribal war, the Anzii while still in Marawaka peacefully took them in. After some time, tribal war broke out between the Anzii tribe and the Baruwu tribe and the Anzii tribe moved out from Marawaka to where they are now. Thus, "Baruya" is not a dialect but an accent, but 'Hipma' is more acceptable to speakers of other dialects. Usirampia is another accent of the Himpa language, but it is mixed up with another language called Bulekiye. It sounds more like Hipma though there are some Bulekiye influences in it. The Anzii tribe speaks the pure version of the Hipma language and there are no influences from other languages because they were surrounded by enemy tribes from the time they were relocated until the arrival of whitemen and did not make many contacts outside their landmarks (Wiki).

[YIRANDALI] Yirandhali (Yirandali, Jirandali), also known as Pooroga, is an extinct Australian Aboriginal language of Hughenden in Central Queensland. Yirandhali is a Pama-Nyungan language. Dixon (2002) speculates that it may belong in the Maric branch of that family, but further research is required before this can be verified, due to

the limited lexical material that is available in the language. There is very little information available about the languages of this region. Oral recounts suggest that the town area of Hughenden was a place that was passed through rather than a place that was used as a regular campsite. The Flinders River is often a dry river bed. At the nearby Porcupine Gorge, in an area known locally as 'the Tattoos', there are signs of Aboriginal rock drawings. This area would have been a more reliable source of water (Wiki).

[**YUKI**] The Yuki language, also spelled Ukiah and also known as Ukomno'm, was a language of California, spoken by the indigenous American Yuki people, formerly in the Eel River area, the Round Valley Reservation, northern California. It became extinct some time in the 20th century. Yuki is generally thought to be distantly related to the Wappo language. Yuki consisted of three dialects: Northern Yuki (Round Valley Yuki), Coast Yuki, and Huchnom (Clear Lake Yuki). These were at least partially mutually intelligible, but are sometimes counted as distinct languages (Wiki).

[**YUPIK, CENTRAL**] Central Alaskan Yup'ik or just Yup'ik (also called Yupik, Central Yup'ik, or indigenously Yugtun) is one of the languages of the Yupik family, in turn a member of the Eskimo–Aleut language group, spoken in western and southwestern Alaska. Both in ethnic population and in number of speakers, Central Alaskan Yup'ik is the largest of the languages spoken by Alaska Natives. As of 2010 it was also the second largest aboriginal language in the United States in terms of numbers of speakers. Yup'ik should not be confused with the related language Yupik spoken in Chukotka and St. Lawrence Island. Of a total population of more than 23,000 people, more than 14,000 are speakers of the language. Children still grow up speaking Yup'ik as their first language in 17 of 68 Yup'ik villages, those mainly located on the lower Kuskokwim River, on Nelson Island, and along the coast between the Kuskokwim River and Nelson Island. The difference between Yup'ik and Iñupiaq is roughly the same as the difference between Spanish and French (Wiki).

With ink stamp on the title page: "Copyright 1944 / by / The Society of the United Brethren for Propagating the Gospel Among the Heathen."

"Because I had been in Greenland and Alaska and had studied the two dialects of the Eskimo language, [Dr. A. Schmitt, Professor of Comparative Philology at the University of Erlangen] asked me to prepare a short grammar and vocabulary. Not having been in Alaska now for over fourteen years and being already over seventy years old, I hesitated to undertake such a difficult task; however, in order that all my written notes and the vocabulary of the Alaskan Eskimo, which I had gathered during those years, should not be lost, I began at once to prepare a grammar and vocabulary for the use of others, and as a ground work upon which others might continue to build" (Preface). This work was reprinted in 1955. Strangely, no mention is made of Augustus Schultze's *Grammar and vocabulary of the Eskimo language of north-western Alaska, Kuskoquim district* (Bethlehem, Pa.: Moravian Publication Office, 1894).

"A photocopied preliminary edition of this dictionary in 200 copies was distributed in 1982. The present edition is extensively revised." "The Central Yup'ik Eskimo language is spoken in southwestern Alaska in the Yukon-Kuskokwim Delta and Bristol Bay areas. All Central Yup'ik dialects are covered in this dictionary... Central Yup'ik is one of three Yupik Eskimo languages. The other two are Siberian Yupik... and Alutiq (also called Sugpiaq, Suk, Pacific Gulf Yupik, and, loosely, Aleut). These three Yupik languages, along with the Iupiaq or Inuit language...constitute the Eskimo branch of the Eskimo-Aleut family of languages... The first written list of Yup'ik words was compiled on Captain James Cook's expedition of 1778...Yup'ik vocabularies were written by many travelers, explorers and missionaries over the years. We have consulted all the vocabulary lists available...We have attempted to be as complete and comprehensive as possible in writing this dictionary. No potential entry was intentionally omitted."

**[YUPIK, CENTRAL SIBERIAN]** Siberian Yupik (also known as Central Siberian Yupik, Bering Strait Yupik, Yuit, Yoit, "St. Lawrence Island Yupik", and in Russia "Chaplinski Yupik" or Yuk) is one of the Yupik languages of the Eskimo–Aleut language family. It the largest Yupik idiom spoken in Siberia, and it is spoken also on St. Lawrence Island. Its speakers, the Siberian Yupik people, are an indigenous people who reside along the coast of the Chukchi Peninsula in the Russian Far East and on St. Lawrence Island in the Alaska villages of Savoonga and Gambell. In Alaska, about 1,050 people from a total Siberian Yupik population of 1,100 speak the language. In Russia, about 300 of an ethnic population of 1,200 to 1,500 speak the language, making a total of about 1,350 speakers worldwide (Wiki).

[ZAPOTEC LANGUAGES] The Zapotec (English pronunciation: /'zæpətek/) languages are a group of closely related indigenous Mesoamerican languages that constitute a main branch of the Oto-Manguean language family and which is spoken by the Zapotec people from the southwestern-central highlands of Mexico. The 2010 Mexican census reports 425,000 speakers, with the majority inhabiting the state of Oaxaca. Zapotec-speaking communities are also found in the neighboring states of Puebla, Veracruz, and Guerrero. Labor migration has also brought a number of native Zapotec-speakers to the United States, particularly in California and Bridgeton, New Jersey. Most Zapotec speaking communities are highly bilingual in Spanish. The name of the language in Zapotec itself varies according to the geographical variant. In Juchitán (Isthmus) it is Diidxazá [didʒa'za], in Mitla it is Didxsaj [didʒ'sa<sup>h</sup>], in Zoogocho it is Diʒa'xon [diʒa?'ʒon],[7] in Coatec Zapotec it is Di'zhke' [di'ʒ'ke?],[8] in Miahuatéc Zapotec it is Di'zdéh [di'zdæ] and in Santa Catarina Quioquitani it is Tiits Së [ti'ts sæ], for example.[9] The first part of these expressions has the meaning 'word' (perhaps slightly reduced as appropriate for part of a compound). (Wiki).

Ethnologue lists 57 separate languages under Zapotec.

[**ZARMA**] Zarma (also spelled Djerma, Dyabarma, Dyarma, Dyerma, Adzerma, Zabarma, Zarbarma, Zarma, Zarmaci, and Zerma) is a member of the Songhay languages. It is the leading indigenous language of the southwestern lobe of the West African nation of Niger, where the Niger River flows and the capital city, Niamey, is located, and it is

the second leading for that entire nation, after Hausa, which is spoken in south central Niger. With over 2 million speakers, Zarma is far and away the most widely spoken of the Songhay languages. The two other major Songhay dialects or languages are spoken upriver in the neighboring nation of Mali. They are Koyraboro Senni, centered on the city of Gao, with about 400,000 speakers, and yet further upriver from Zarma territory, Koyra Chiini, centered on the eminent ancient university city of Timbuktu, with about 200,000 speakers. According to some reports, speakers of Zarma do not understand Koyraboro Senni. Further downriver, another dialect of the Songhay languages is Dendi, with about 100,000 speakers. In earlier decades, Zarma was known as Djerma, and it is still sometimes called Zerma (especially among French-speakers), but today it is usually called "Zarma" as this is what Zarma-speakers call their own language (Wiki).

"Editing and publishing a dictionary that one wishes to be *fundamental* is a risky business, particularly when no previous corpus of material has been established. Thus it is possible that in spite of all our precautions, some quite ordinary word has been left out, either because it was simply forgotten, or lost in the course of the continuous rearrangement of the text; we hope this hasn't happened too often... we are taking this risk. In leafing through the dictionary it will become clear that it is far from elementary, it is rich in its number of words, turns of phrases, expressions, proverbs, in short *the entire culture of Zarma*. We hope that teams of specialists will soon enlarge and deepen our work" (Introduction, tr: BM).

[**ZAYSETE**] Zayse-Zergulla is the combined title for the two closely related dialects of Zayse (also Zaysete, Zaisse, Zaysite, Zaysse) and Zergulla (or Zergula). The division may

be more along ethnic or geographic lines than linguistic. It is an Afro-Asiatic Omotic language, and is spoken in the southwestern part of Ethiopia, to the immediate west of Lake Chamo. It is similar to the Gidicho dialect of the Koorete language (Wiki).

[**ZAZAKI, NORTHERN**] Zaza language, also called Zazaki, Kirmanjki and Dimli, is an Indo-European language spoken primarily in eastern Turkey by the Zazas. The language is a part of the northwestern group of the Iranian section of the Indo-European family, and belongs to the Zaza–Gorani and Caspian dialect group. Zaza shares many features, structures, and vocabulary with Gorani. Zaza also has some similarities with Talyshi and other Caspian languages. According to Ethnologue (which cites [Paul 1998]), the number of speakers is between 1.5 and 2.5 million (including all dialects). According to Nevins, the number of Zaza speakers is between 2 and 4 million (Wiki).

[**ZENAGA**] Zenaga (autonym Tuddungiyya) is a Berber language spoken between Mederdra and the Atlantic coast in southwestern Mauritania and in Senegal. It shares its basic linguistic structure with other Berber idioms, but specific features are quite different. In fact, Zenaga is probably the most divergent surviving Berber language, with a significantly different sound system made even more distant by sound changes such as /l/ > /dj/ and /x/ > /k/, as well as a difficult-to-explain profusion of glottal stops. The name 'Zenaga' comes from that of a much larger ancient Berber tribe, the Iznagen, who are known in Arabic as the Sanhaja (Wiki).

"A member of the branch of Central Tai, Lungming is spoken in Lungming, a Tai-speaking town and county [in China] in the southwestern part of Kwangsi near the border of Vietnam.... [W]estern scholars have tended to identify the Tai dialects of western Kwangsi as Nung.... In China, on the other hand, all the Tai dialects are officially referred to as the Chuang (Zhuang) language.... Specific studies of the Lungming dialect are restricted to citations by Gedney in various linguistic papers... and to this monograph.... Central Tai dialects provide the basis for Savina's 1924 French-Nung-Chinese dictionary.... There is also a Tay-Nung grammar and Tay-Nung dictionary published in Vietnam (Hoang, Luc, and Hoang 1971, 1974).... Lungming has no native writing system; all writing is done in Chinese characters" (Introduction).

[ZIALO] Zialo (self-identification Ziolo) is a language spoken by the Zialo people in Guinea. The language of Zialo which belongs to the Southwestern group of the Mande branch of the Niger–Congo language family is spoken by approximately 25,000 people residing in the province of Macenta in the southeast of Guinea. The Zialo area covers over 50 villages (including two centers of subprefectures). Nearly a third of all Zialo live now in the nearby towns of Macenta and Gekedou, as well as in the city of Conakry. The Zialo language does not have its own writing system; people use French in all official paperwork. Zialo was recognized as a distinct language and studied by the Moscow-based linguist Kirill Babaev, member of the Russian Linguistic Expedition to Guinea, in January–February 2010. Before that, Zialo was considered a remote dialect of the language of Loma, however, significant differences were discovered between the two. Zialo speakers name five major dialects of the language: Bayawa, Wolo-Ziolo, Woyjawa, Kelighigo and Lawolozu, of which the last one seems the most specific. The Zialo probably came to their present location from the south, the present-day territory of Liberia, as indicated by their legends. Nowadays, the majority of Zialo are Christians; there are also groups of Muslims and animists (Wiki).

[ZIGULA] Zigula (Zigua) is a Bantu language of Tanzania and of Somalia, where it is known as Mushunguli (Mushungulu). It is best known for the Mushunguli dialect.

Mushunguli is spoken by about 23,000 people from the Bantu minority ethnic of southern Somalia, in Jamaame, Kismayo, Mogadishu, and the Juba River valley. It shows affinities with other adjacent Bantu varieties. In particular, Mushunguli shares strong lexical and grammatical similarities with the language of the Zigua people who inhabit Tanzania, one of the areas in south-eastern Africa where many Bantu in Somalia are known to have been captured from as slaves during the 19th century. Ethnologue notes that the Mushunguli in Tanzania are the Wazegua. Many Mushunguli Bantu men also speak as working languages the Afro-Asiatic Maay and Somali languages of their Somali neighbors (Wiki).

[**ZOQUE LANGUAGES**] The Zoque (/ˈsoʊkeɪ/) languages form a primary branch of the Mixe–Zoquean language family indigenous to southern Mexico. They are spoken by around 70,000 indigenous Zoque people. The Zoques call their language O'de püt. There are about 100,000 speakers of Zoque languages. 63,000 people reported their language to be "Zoque" in the 2010 census. An additional 41,000 reported their language to be "Popoluca"; probably 90% of these are Sierra Popoluca and thus Zoque (Wiki).

[**ZULU**] Zulu (Zulu: isiZulu) is the language of the Zulu people, with about 10 million speakers, the vast majority (over 95%) of whom live in South Africa. Zulu is the most widely spoken home language in South Africa (24% of the population), and it is understood by over 50% of its population. It became one of South Africa's 11 official languages in 1994. According to Ethnologue, it is the second most widely spoken of the Bantu languages, after Shona. Like many other Bantu languages, it is written with the Latin alphabet. Even in English, the language is often referred to by using its native form, isiZulu (Wiki).

**1850:** [LILLYbm] *The Zulu companion, offered to the Natal colonist, to facilitate his intercourse with the natives*, by C. W. Posselt. Pietermaritzburg: D. D. Buchanan, 1850. Contemporary (?) blue paper over boards, with tan label printed in black. Ff. 1-3 4-64 (missing leaf preceding title page?). First and only edition. Not in Zaunmüller.

"The natives within the colony of Natal, called by the general name of Amazulu, constitute that class of population which is employed for various works by every white man in this district. One of the greatest difficulties which the latter meets with from this class of laborers, arises from his inability to make his wishes and orders understood by this servants. To try to have removed, in some measure, this difficulty, is the object of this little volume... This work, being divided into Twelve Chapters, commences with the subject of hiring a servant, then proceeds to give orders and directions referring to grooming, herding, kitchen-work, house-building, gardening, &c., till, in the Eleventh Chapter, it deals out approbations of good conduct, admonitions, and threatenings. The concluding Twelfth contains a translation of the Ten Commandments, the Lord's Prayer, and the Apostolic Creed" (Preface).

Posselt was a member of the Berlin Missionary Society. "A very creditable little Zulu-English phrase book of 64 pages, printed in Pietermaritzburg" (C.M. Doke, "Bantu

"[T]his little book ... will be found, I doubt not, a most valuable help for Missionaries and others, in acquiring the language of our Natives. In the compilation of this, and of the Kafir-English Dictionary, Mr. Perrin has derived considerable assistance from the Vocabularies prepared by some of the American Missionaries, to which they very kindly gave him free access" (Advertisement, J. W. Natal).

"This little book of 225 pages (single column), containing about 5,00 English words, was a meritorious piece of work. ... Perrin's works is particularly valuable in the equivalents he gives to English idiomatic usages, as a glance at such entries as 'come,' 'break,' 'cut,' 'draw,' ... and many others will shew" (Doke, "Bantu Language Pioneers of the 19<sup>th</sup> Century," p. 44, in *Contributions to the History of Bantu Linguistics*).

"Mendelssohn located a copy [of this work] in the British Museum Library, but had not one in his own collection (vol. II, 154) South African bibliography to ... 1925, Vol. III, page 656, locates six repositories only, surprisingly none of them in Natal. Can this be possible? The same source records the existence of Perrin's *A Kafir-English dictionary of the Zulu-Kafir language*, ... also published in 1855, but by the S.P.C.K. in London.

"Perrin was born in Chichester in 1801 and died at Durban in 1888. He worked with the American missionary Josiah Tyler at Esidumbini mission station from 1850. He also served as secretary to Sir Theophilus Shepstone, the native administrator. At first a member of the Anglican Church, Perrin later joined the Baptists following an ecclesiastical disagreement with Bishop Colenso. The two nonetheless remained friends, and under the supervision of Colenso, Perrin combined the vocabularies drawn up by various missionaries to make 'the first Zulu dictionaries.' (Dictionary of South African biography, Vol. II, page 540).

"Bleek says of this dictionary that it was 'compiled by Mr. James Perrin (who is now Clerk to the Secretary of Native Affairs in Natal), partly from manuscript vocabularies of different missionaries. [It was] published by the Bishop of Natal. ... Contains more than seven thousand words.' (Philology ... South Africa, page 96). The partnership of May and Davis, responsible for the printing of this little work, had its origin in the firm of David Dale Buchanan, editor, printer and publisher of *The Natal Witness*. These two printers were in Buchanan's employ until his legal practice and public duties began to absorb more of his time, when they took over the printing operations on their own account. "Döhne began his missionary work amongst the Xhosa in the Ciskei. His earliest publication in Xhosa is a catechism published in 1841 at Fort Peddie. The Seventh Frontier War (1846 - 47) led Döhne and a few of his colleagues to accept an invitation from Sir Theophilus Shepstone to move to Natal where they might endeavour to convert the Zulu to Christianity. Together, they founded the Emmaus mission station at the foot of the Drakensberg in 1847, where Döhne soon learnt Zulu and began to prepare his dictionary for publication. 'This was the first complete dictionary of a Bantu language and contained considerably more material than the Zulu dictionary by James Perrin which had appeared in 1855.' It is extensively annotated (partly in longhand; partly in shorthand), probably by Reichelt, and includes a manuscript appendix of over one hundred pages in the same hand ('Ergänzungen'). We have been able to trace very little respecting Reichelt, other than that in 1878 he is described as 'late Moravian missionary in Kaffraria' and as author of 'an interesting pamphlet recently published in the German language' on the history of Shiloh and the missions of the United Brethren in Kaffraria (South African bibliography to ... 1925, Vol. IV, page 11. One newspaper clipping is a letter from A. N. Montgomery of 1882 concerning Zulu orthography; a second is a 1905 review of the new edition of Colenso's dictionary.

"Armorial bookplate of 'Alexander Nixon Montgomery; late Captain of The Royal Fusiliers' on the pastedown endpaper. This bookplate does not appear in South African bookplates from the Percival J.G. Bishop Collection. Montgomery (1839 - 1911) was author of *Cetywayo, Natal, Zululand* (London, 1882) and *The Natal magistrate* (Pietermaritzburg, circa 1879). In the former pamphlet, he suggests that Cetshwayo should be returned to Zululand as king of the Zulus, subject to certain conditions. (South African bibliography to ... 1925, Vol. III, page 361). Not in Mendelssohn. Colenso's dictionary saw at least nine issues to about 1905. The printing firm of P. Davis came into existence in 1860 when John May retired from the partnership of May & Davis. (Rossouw, *South African printers and publishers; 1795 - 1925*, page 101) (This first edition is not in Smith, *Catalogue of Bantu, Khoisan and Malagasy in the Strange Collection of Africana*, where # 1136, records only the 4th edition of 1905)" (bookseller's description: Christison Rare Books, Natal).

"The outstanding figure in Zulu literary work at this period was undoubtedly John W. Colenso, Bishop of Natal..... Though not so 'philological' as Döhne's work, this dictionary contained more words and was more easily handled by the seeker after meanings of words than the earlier work, and so became more generally popular, going through a number of editions, and even outlasting the more modern works of Bryant and Samuelson, to still be in print [in 1940]. This dictionary contains upwards of 10,000 entries. It is remarkable that Colenso found time to do such valuable linguistic work on Zulu in the midst of so many other labours, harassed as he was by theological controversy, involving great literary effort, and distracted as his attention was by his championing of the cause of the Zulu king and his people.... Colenso's name will always

be held in honour where Zulu literature is known" (C.M. Doke, "Bantu Language Pioneers of the Nineteenth Century," in *Contributions to the History of Bantu Linguistics*).

New and revised edition **1878**: [LILLYbm] *Zulu-English dictionary*, by J[ohn] W[illiam] Colenso [1814-1883]. Maritzburg: Davis & Sons, [1878]. Original red cloth over boards, worn and lacking the original paper label; upper hinge split; preliminary pages detached and frayed, foxing throughout. Pp. [2] i ii-vi, 1 2-656. New and revised [second] edition. Zaunmüller, col 409 (listing only 1884 edition, with new edition 1934). Hendrix 1819 (listing 1905 edition and noting first edition of 1861). Includes Zulu-English, pp. [1]-621, with addenda, pp. 621-640.

"The first edition was published in 1861; this, the [revised and enlarged] second edition, was printed at Colenso's Ekukanyeni Mission press, but by a partnership of Magema, Mubi & Co. These men were amongst Colenso's early converts. (South African bibliography to ... 1925, Vol. I, page 591) The item on offer here would appear to represent the first production by this Black pioneer printing partnership. (Furthermore, we know of no earlier book printed by a black-managed printing firm.) (cf. Fransie Rossouw, *South African printers and publishers; 1795 - 1925*, page 98) Of Magema and his fellow Zulu printers at the Ekukanyeni mission press, the following is written: 'Sommige van die vakleerlinge was mettertyd [early 1860s] so bedrewe in die boekdrukkuns dat Colenso die drukkery in hulle sorg kon laat. Tydens sy drie jaarlange besoek aan Engeland in verband met die kerk stryd het hy 'n jong Zulu, Magema, in beheer van die drukkery gelaat. Hierdie man was so bedrewe in die drukkuns dat hy die pers aan die gang gehou het asof Colenso self daar was. (P.J. Schutte, *Sendingdrukkerse in Suid-Afrika; 1800 - 1875...*, page 353)

This copy carries the signature of 'Mubi ka Nondenisa; Ekukanyeni; 1879'; and was evidently the property of the Mubi of the printing partnership. It is [copiously] annotated (very possibly by Mubi himself) on several pages as well as on the endpapers [perhaps in preparation of the next edition]. Although in poor condition, we consider this to be a rare and important association copy. (This second edition is not in Smith, *Catalogue of Bantu, Khoisan and Malagasy in the Strange Collection of Africana*, where # 1136 records only the 4th edition of 1905)" (Bookseller's description: Christison Rare Books).

Fourth edition **1905**: [LILLYbm] *Zulu-English Dictionary by J[ohn] W[illiam] Colenso [1814-1883]. Fourth Authorised Edition. Revised and Enlarged*. Cover title: *Colenso's Zulu-English Dictionary. Fourth Edition*. Natal: Vause, Slatter & Co., 1905. Original olive cloth over boards, lettered and decorated in black. Pp. i-v vi-xiv, 1 2-728. Fourth edition, with preface by Harriette Emily Colenso. Zaunmüller, col. 409 (listing only 1884 edition, with new edition 1934). Includes Zulu-English, pp. [1]-714, Zulu-English supplement, pp. 715-719, and Zulu-English hybrid words commonly used (1898) in Isipiki [Fanagolo], pp. 721-724.

"I believe that a fine language like the Zulu is a valuable possession for the country, and that the debasing of it into an ungrammatical mixed lingo, only half understood on either side, which is now going on, is a positive evil; not merely a measure of the harm done to the Native by contact with Europeans as he experiences it, but also a cause contributing to that harm....Hybrid words must, of course, arise wherever two or more vigorous races begin to live and to work together...and I have recognised this need by appending to the dictionary proper a list of some of those words now in common use by Natives in Natal" (Preface).

**1880:** [LILLY] *An English-Zulu dictionary: with the principles of pronunciation and classification fully explained*, by Charles Roberts (1836-1901). London: Natal: Printed for the Wesleyan Missionary Society, Davis and Sons, [1880]. Original dark green cloth, decorated in blind and lettered in gold. First edition. Hendrix 1841. Not in Zaubmüller.

**1892:** [LILLYbm] *An easy Zulu Vocabulary and Phrase Book with Grammatical Notes*, by Samuel Gibbs. Natal: P. Davis and Sons, 1892. Later dark green polished quarter-calf and green cloth over boards, preserving original wrappers, spine lettered in gold, title page professionally laid down on paper. Pp. 1-7 8-53 54. No edition indicated, preface dated 1884. Not in Zaubmüller. Hendrix 1836 (listing "2<sup>nd</sup> edition" of 1941 "reprint of 1892 edition"). OCLC locates one copy dated 1890 and three copies dated 1897, none dated 1892. Beginning apparently in 1941, this vocabulary was reprinted several times without attribution by Shuter and Shooter in Pietermaritzburg. Not in Zaubmüller. Gibbs is listed as a Zulu translator and interpreter, Samuelson as an attorney, Supreme Court. Includes word lists grouped by theme, as well as a "general" English-Zulu vocabulary, pp. 13-25.

"The primary object of this little work is to help new-comers in their common intercourse with Kafirs" (Preface).

Enlarged edition **1902:** [LILLYbm] *An easy Zulu Vocabulary and Phrase Book with Grammatical Notes*, by Samuel Gibbs, with additions and amendments by R. C. O Samuelson. Natal: P. Davis and Sons, 1902 [cover date: 1903]. Later gray quarter-linen and gray paper over boards, incorporating original front wrapper. Pp. 1-7 8-51 52. No edition indicated, preface dated 1884. Not in Zaubmüller. Hendrix 1836 (listing "2<sup>nd</sup> edition" of 1941 "reprint of 1892 edition"). Gibbs is listed as a Zulu translator and interpreter, Samuelson as an attorney, Supreme Court. Includes word lists grouped by theme, as well as a "general" English-Zulu vocabulary, pp. 13-25.

**1894:** [LILLYbm] *A First Kafir Course*, by C. J. Crawshaw. Cape Town: J. C. Juta, 1894. I-iii iv v vi-vii viii I 2-114 115 116-133 134-135. 21.5 cm. Original red cloth, lettered and decorated in black. Second edition. Includes English-Kafir, pp. [115]-125, and Kafir-English, pp. 125-133. Not in Zaubmüller.

**1897:** [LILLYbm] *A First Kafir Course*, by C. J. Crawshaw. Cape Town: J. C. Juta, 1897. Hardbound without d.j. Third edition. Includes Kafir-English / English-Kafir vocabularies, pp. 115-133. Not in Zaubmüller.

**1900:** [LILLYbm] *A Zulu manual, or vade-mecum, being a companion volume to "The Zulu-Kafir language," and the "English-Zulu dictionary,"* by Charles Roberts

[1836-1901]. London: Kegan Paul, Trench, Trübner & Co. Ltd., 1900. Original maroon cloth over boards, lettered in gold. Pp. *i-v* vi-viii, *1* 2-153 *154-156*. First edition. Not in Zaunmüller. Hendrix 1842. Includes Zulu-English Botanical, Geological and Natural History terms, pp. 44-47, 50-56, and English-Zulu vocabulary, pp. [75]-153.

"The desirability of preparing a companion volume to [the author's previous works] was, some time ago, suggested to the author. Botanical and Geological terms, as well as those of Natural History, have been arranged in a convenient form. Various other additions have been made, partly with the object of assisting those missionaries who are accustomed to attend the sick, and prescribe for them simple remedies. ... The remarks, as to the superstitions of the South-African natives, will enable the reader to understand what would otherwise remain unintelligible" (Preface).

**1901:** [LILLYbm] *Three native accounts of the visit of the Bishop of Natal in September and October, 1859, to Umpande, King of the Zulus; with explanatory notes and a literal translation, and a glossary of all the Zulu words employed in the same: designed for the use of students of the Zulu language.* Third edition., [by John William Colenso]. Pietermaritzburg; Durban: Vause, Slatter & Co., 1901. Original black cloth over boards, lettered and decorated in blind. Pp. [4] *1* 2-172. Third edition. Not in Zaunmüller. First edition 1860. Colenso, Bishop of Natal, was the author of a Zulu-English dictionary first published in 1861.

"I have found it necessary also to add a glossary. Mr. Perrin's small dictionary being out of print, and Mr. Dohne's being too large for the wants of the ordinary student" (Introduction).

"A remarkable little publication for the times...It contains three Zulu texts... followed by a full glossary... It is a great tribute to Colenso's linguistic ability that the word-division he used in 1860 is practically identical with what has been decided in the latest orthography [1931] settlement as correct for Zulu....This little book was recently declared by competent Zulus as one of the four best examples of the purest Zulu" (C.M. Doke, "Bantu Language Pioneers of the Nineteenth Century," in *Contributions to the History of Bantu Linguistics*).

**1905:** [LILLYbm] *A Zulu-English dictionary with notes on pronunciation, a revised orthography and derivations and cognate words from many languages; including also a vocabulary of Hlonipa words, tribal-names, etc., a synopsis of Zulu grammar and a concise history of the Zulu people from the most ancient times,* by A[lfred] T. Bryant. Pinetown, Natal: The Mariannahill Mission Press, 1905. Original brown cloth over boards [hinges cracked], lettered in gold. Pp. *1-5* 6-111 *112,* <sup>2</sup>*1* 2-778 779-782. First edition. Zaunmüller, col. 409. Hendrix 1814. Includes Zulu-English, pp. <sup>2</sup>[1]-737, "Vocabulary of the Hlonipa language of the Zulu Women" (Zulu-Hlonipa), pp. <sup>2</sup>[738]-747, and "appendix of additional words, improvements, corrections, etc.", pp. <sup>2</sup>762-778.

Hlonipa is a system of respect in which Zulu women "avoid mention of in conversation, certain words... which contain the radical of the name of certain persons to be so respected... This practice naturally causes the speech of the women to differ very considerably from that of the men; indeed, were all the *hlonipa* words placed together, they would of themselves constitute quite a decent language" (pp. <sup>2</sup>255-256).

"After patiently plodding along for a period extending for over twelve years, I at length enabled to offer the public my Zulu-English Dictionary—the result of labours accomplished entirely in the solitude of various remote native missions in Zululand and

Natal, with neither a reference library to consult, nor the conversation and advice of neighboring students to profit by....The Zulu language is eminently well stocked and vividly expressive, is resourceful and plastic to all demands. It luxuriates in sweet mellow vowel-sounds, and the quaint musical cadence of its flow rivals the most silvery-toned Italian....[T]he Zulu language is in the keeping of the female sex...the ordinary vocabulary and word-knowledge of the women was in marked excess of that of the men... [Nevertheless the practice of *hlonipa*] has done much to corrupt or destroy [the language]....[T]his is, I believe, the first time the female *hlonipa* language has been brought to publication" (Preface).

**c. 1920** [LILLY] *Zulu Vocabulary and Phrase Book for the use of Immigrants and Settlers in the Province of Natal and Zululand. Fourteenth Edition. Revised and Corrected.* Durban, Natal: T. L. Cullingworth, n.d. [c. 1920]. 50 p., 18.3 cm. Original tan wrappers, lettered and decorated in black. English-Zulu, pp. 9-31; English-Zulu phrases, pp. 32-50. The first edition of this work seems to have appeared in 1850 under the title *Zulu Vocabulary, and Phrase Book: Designed as an Introduction to the Language Spoken by the Kafirs & Zulus in Port Natal*, 33 p., published in Natal by J. Cullingworth. By 1873 it appeared under the present title. It had reached its 14<sup>th</sup> edition by around 1920, still at only 50 pages in length, and continued to be reprinted.

**1915:** [LILLYbm] *An English-Zulu dictionary, with the principles of pronunciation and classification fully explained*, by Charles Roberts. London: Kegan Paul, Trench, Trübner and Co., 1915. Original maroon cloth over boards, lettered in blind and gold. Pp. *i-iii iv-xxii xxiii-xxiv, 1 2-267 268*. Second, edition, sixth impression with supplement. Zaunmüller, col. 409 (listing only the 13<sup>th</sup> impression, dated 1951). The first edition was 1880 the second edition with supplement was first published in 1895.

**ca. 1917a:** [LILLYbm] *An abridged English-Zulu word-book. Incwadi yabantu yamazwi esingisi ecasiselwe ngesizulu*, by A[lfred] T. Bryant. [Mariannhill, South Africa]: Mariannhill Mission Press. [ca. 1917]. Original red cloth over boards, lettered and decorated in black. Pp. *1-5 6-471 472-476*. No edition indicated. Includes English-Zulu, pp. [5]-471. This copy with the ownership signature of John Holford, dated 1938. No preface or copyright date indicated. Binding is early twentieth century.

Seventh edition **1953:** [LILLYbm] *An abridged English-Zulu word-book. Incwadi yabantu yamazwi esingisi ecasiselwe ngesizulu*, by A[lfred] T. Bryant. [Mariannhill, South Africa]: Mariannhill Mission Press, 1953. Original green cloth over boards, lettered and decorated in black. Pp. *1-7 8-378 + three blank leaves*. Seventh Edition noted on title page. English-Zulu, pp. [7]-378. This copy from the library of the noted linguist Johannes Rahder with his ownership stamp.

**ca. 1917b:** [LILLYbm] *Incwadi yesisngisi nesizulu. Zulu without a grammar, by conversational exercises. For housekeepers, farmers, overseers, storekeepers, doctors, police, and all such as come into frequent contact with natives*, by A[lfred] T. Bryant. Maritzburg; Durban: P. Davis & Sons, [ca. 1917]. Original gray-green cloth on boards, lettered and decorated in black. Pp. *1-4 5-130*. Third edition. Not in Zaunmüller. With an English-Zulu vocabulary of "more than 1500 common words," pp. 111-130. Bryant published a Zulu-English dictionary in 1905, which he re-issued in an abridged form in 1945, together with a "second, altered and perfected" edition of the present title.

**1923a:** [LILLYbm] *A Concise English-Kafir Dictionary*, by J. McLaren. London: Longmans, Green and Co., 1923. Original red cloth over boards, lettered and decorated in black. 320 pp. First edition. Blind stamped "Presented by the Publisher" on the title page. Zaunmüller, col. 409.

"This Dictionary has been compiled as a companion to the author's... *Concise Kaffir-English Dictionary*. It is considerably larger...as there is no large English-Kafir dictionary corresponding to Dr. Kropf's Kafir-English book, and it seemed desirable to define all the words and phrases that the ordinary student of the languages would be likely to need. The spelling 'Kafir' has been adopted in this book, instead of 'Kaffir,' in conformity with the usage of the Education Departments and the Universities of South Africa."

**1923b:** [LILLYbm] *Zulu references for interpreters and students*, by Carl Faye. With 5 portraits and a map. Pietermaritzburg: City Printing Works, Limited, 1923. Original green cloth over boards, lettered and decorated in black. Pp. [14] 1 2-122 123-126. First edition. Not in Zaunmüller. Hendrix 1834. Includes various thematically arranged Zulu-English vocabulary lists, including official terms, pp. 60-62, physical features of country and relative terms, Zulu-English and English-Zulu, pp. 63-76 This copy with the blind stamp of the Munger Africana Library on the title page.

"The greater part of these References was drawn up originally for my own use, with no thought of publication.... the purpose of publication is merely to place on record, in handy form, information which recently has to be referred to by Zulu interpreters in courts of law and in lawyer's offices, by police, and on occasions by missionaries, teachers in Native schools, and by others who have to deal direct with Natives in the Province of Natal, as well as by Zulu students.... It has been found desirable ... merely to hint and no more, at forces which are at work.. changing the life and language of the Zulus.... There is the big subject of miscegenation; the old religious ideas of the Zulus are being slowly displaced, despite the struggle for existence of Zulu superstition; influences are at work affecting the type of dwelling of the Zulus, their food, dress, handicrafts, customs, and thought.... To have elaborated on any one of these topics would alone... have called for a different kind of work from the present one... It is only fair that this explanation should be made, lest it should seem that I have been unaware of the gravity of these matters" (Introductory Note).

**1948:** [LILLYbm] *Zulu-English Dictionary*, compiled by C[lement] M[artin] Doke & B[enedict] W[allet] Vilakazi. Johannesburg: Witwatersrand University Press, 1948. Original dark blue cloth over boards, lettered and decorated in gold. Pp. [2] i-vii viii-xxvi, 1 2-903 904. First edition. Zaunmüller, col. 409. This copy with the release stamp of the British Museum, and with "British Museum" and a crown stamped in gold on front and rear cover, and "British Museum" stamped on top edge. Includes Zulu-English, pp. [1]-903.

"The preparation of this dictionary was carried out under the auspices of the Bantu Studies Department of the University of the Witwatersrand and the Native Education Department, Natal.... The compilers based their original work upon A. T. Bryant's 1905 *Zulu-English Dictionary*, with the ready consent of the author, who wrote in 1937 that 'such a Zulu Dictionary as you forecast had sometime t come, and that time has come.' The need for a new Zulu dictionary was urgent. Both Bryant's outstanding work and the late R. C. Samuelson's *King Cetywayo Zulu Dictionary* were out of print; only Colenso's

work, very sound but now out of date and inadequate in scope...was still procurable" (Introduction)."

Second edition, enlarged, **1954**: *Zulu-English Dictionary*, compiled by C[lement] M[artin] Doke & B[enedict] W[allet] Vilakazi. Johannesburg: Witwatersrand University Press, 1954. Original dark blue cloth over boards, lettered and decorated in gold; gray d.j. lettered and decorated in black. Pp. [2] *i-vii* viii-xxvi, 1 2-918 919-920. Second edition revised with addendum. Zaunmüller, col. 409 (listing both 1948 and 1954 editions

"Advantage has been taken of the need for a second edition to make a number of corrections and improvements in the text, and to add a very considerable number of new words...In order to avoid the expensive upsetting of the whole type of the first edition, the new words are gathered into an Addendum at the end of the volume; the rightful place in the text, however, is indicated by a star H, which will immediately direct the consulter's attention to the Addendum" (Prefatory Note to the Second Edition).

**1958**: [LILLYbm] *English and Zulu Dictionary*, compiled by C[lement] M[artin] Doke, D. McK. Malcolm, & J. M. A. Sikakana. Johannesburg: Witwatersrand University Press, 1958. Hardbound without d.j. Murphy 107: 1096. First edition. Not in Zaunmüller. Includes both English-Zulu and Zulu-English.

[ZUNI] Zuni /'zu:ni/ (also formerly Zuñi) is a language of the Zuni people, indigenous to western New Mexico and eastern Arizona in the United States. It is spoken by around 9,500 people worldwide, especially in the vicinity of Zuni Pueblo, New Mexico, and much smaller numbers in parts of Arizona. Unlike most indigenous languages in the US, Zuni is still spoken by a significant number of children and, thus, is comparatively less threatened with language endangerment. Edmund Ladd reported in 1994 that Zuni is still the main language of communication in the pueblo and is used in the home (Newman 1996). Within the language, the language itself is called Shiwi'ma (shiwí "Zuni" + -'ma "vernacular", trans. as "Zuni way") and its speakers are collectively A:shiwí ('a:(w)-"plural" + shiwí "Zuni") (Wiki).

Ethnologue: zun. Alternate Names: Shiwi'ma, Zuñi.
